Ouch 499.00 US plus 65.00 shipping =564.00

In my opinion still a little high considering the reveiws it got in "Shortwave Review" (Great Britain). 65.00 for shipping and insurance ????????

Monty

WiNRADiO Sales wrote:

FROM WINRADIO HEADQUARTERS

Melbourne, Australia

Dear Radio Enthusiast:

Over the last few years, a bunch of USA and Australian scanner enthusiasts and radio amateurs joined forces in the design of a unique radio receiver. It became the world's first wide-band radio scanner to fit on a PC card and operate under Windows.

Against all the skepticism about computer noise and feasibility of such a device, the project was hugely successful - so successful that the jury of R&D Magazine awarded WiNRADiO its annual Most Significant Product of the Year in Philadelphia last year. WiNRADiO, also scored rave reviews in magazines such as Monitoring Times, Radio Communications, World Scanner Report, as well as on the CNET TV network.

WiNRADiO is now in widespread use, not only by VHF/UHF scanner enthusiasts (as it was primarily intended), but also by commercial, professional, defense, and security agencies world-wide.

The WiNRADiO receiver covers a frequency range of 0.5 to 1300 MHz (less cellular bands) and is put together by none other than the IBM plant in Wangarratta, Australia.

Having just introduced a new, advanced version of WiNRADiO which includes a spectrum analyzer with an exciting patented

graphic tuning capability, we have decided to celebrate

another successful year in the industry and offer you

WiNRADiO direct from a manufacturer's rep, passing on

the savings of the distribution costs and yet offer the

significant benefit of reliable US-based support and service.

The USA list price is $585, however for a limited time, we can

offer WiNRADiO direct from our USA representative for a

substantial discount. This offer expires on December 31, 1997.

Ouch 499.00 US plus 65.00 shipping =564.00

In my opinion still a little high considering the reveiws it got in

Carl, Carl, Carl...

Only 27% of HF hams use CW regularly.

What percentage of HF hams are ACTIVE HF hams?

Well?

If it's 35%, then 80% of ACTIVE HF hams use CW regularly.

Code is important! I know, I have a no-code license, but I'm working on the code. It's just a little hard, you know! I think hams who call code BS should be yanked off the air!

Hello,
I have a PRO-2006 in AWESOME condition with OPTO scan board inside...
manuals - antenna - software - mobile mount (VERY HARD TO COME ACROSS) and
cables.

Looking to get $600 for all of it... Willing?? Let me know...

Jeffrey

> ear but nonetheless there whizbang modes".

Not at all ... you'd be hard-pressed to cause serious interference
to one of those "undetectable by human ear but nonetheless there
whizbang" signals. As Gary has related, quite a few OOK Morse ops,
apparently pissed at having to share "their" bands with other digital
modes, frequently *try* to jam digital modes ... with little success.
From what I've seen, most of the digital ops find it quite humorous
and chuckle at the frustration the LIDs must feel when their feeble
attempts at jamming are so unsuccessful ...

> It also appears
> strange in the light of the preponderance of confessions of
> digital operators here on this very forum that they seldom listen
> with the ear but just observe the lights on their [brand_x] modem to
> determine if someone is there with another digital signal.

Where did you read this? However, any decent digital controller
should be able to recognize the presence of significant signal
energy in-band without the operator having to listen by ear.

If/that some outdated/cheap_to_begin_with ("cheap" here being used
as "cheesy", "inferior", etc.) device is not capable of that, it
really should be deemed unsuitable for use, relegated to the
scrap heap, and replaced with something decent.

> If it is difficult for you to grasp these concepts then you should
> do more Morse OOK operating on the HF bands.

I'll let Gary choose whether or not to repeat once again, his long
history of OOK Morse usage ... myself, I've used Morse quite a bit

and found it brutally awkward and painfully slow ... I decided it
was not worth *my* effort to continue its use when far better things
are available ... however, if *you* want to use it, that's fine by me.

> It is these very
> whizbangers who have decided upon their own, or have been persuaded
> by folks like you, that Morse QSO's on HF have such little
> value that they can be interfered with at will.

Not at all ... I would never condone any mode/operator feeling like
they could "interfere at will" with any other mode/operator ...

> These attitudes
> have so stigmatized digital operation on the HF bands that those
> modes have become an operational pariah and are declining in use
> (or becoming "obsolete" to borrow your logic). (see Oct QST).

Actually the *primary* reasons for any decline in HF digital, if, in
fact, there even *is* such an alleged decline, would be the fact that
HF packet SUCKs, too many hams art stuck with crappy "TNCs" that are
outdated, too many hams are too technically ignorant to understand the
benefits of *better* digital modes, and too many hams are too damned
cheap replace that crappy, outdated TNC with something that actually
is capable of working well in the HF environment ...

Tonight, there was a shooting up at the local mall. My wife was heading that way to get groceries. Luckily, I heard about the shooting and the fact that the gunman was still at large on my scanner. I was able to get ahold of her on the CB and redirect her to a different store. Now my wife is safely miles away from an area where there is a criminal with a gun at large being searched for at night by no fewer than 20 cops. Potential for a shootout does exist, and there is a real hazard for anyone in that area. Thankfully I am able to exercise my rights as an American citizen to monitor the police bands on my scanner!

I checked out the Uniden TrunkTracker at my local RS
and its only $599CA (about $400US). Such a deal!

I think RS is gouging us Canadians.
Of course I would also want to buy the Service Manual.

Are there any software alternatives?
I have a 2006/OS456 and a couple of other 800MHz-capable
receivers with discriminators tapped onto a PC.

Is there OS456 software that can direct a 2006 by
following the control channel from another radio?
Anyone out there working on this?

Found 2 things unusual. The wein oscillator I've never heard of, and typically pulse dialing freqencies are 2 frequencies mixed. DTMF ..dual tone multi freqency.

See the TrunkTrac ad on page 77 of the October issue of Monitoring Times.
With a SINGLE radio you can track from one to four systems at the same
time. Both 800 MHz and 900 MHz systems can be followed. The 2006 w/OS456
is one of the supported radios.

Greg

That article was pathetic. It was inaccurate, incomplete, and
misleading. But then, QST has always been too little and too late
when it comes to reporting on packet radio.

>Actually the *primary* reasons for any decline in HF digital, if, in

I submit that the most important reason by far for the decline of
packet is the refusal of hams to coordinate and cooperate with each
other. It's pretty hard to run any sort of net, even at archaic
speeds, with every other node and BBS run by a Lockout Lid. The
beginning of the end of the regional packet net was when TheNet added
callsign lockout capabilities to the node firmware.

He's correct, just enter the channel number you want to skip (or put
back into scan) by pressing the two digit channel number. You don't
have to press the enter key. The enter key, while scanning, toggles
between 15 and 8 channels per second scanning speed.

Correction... this system (better known as carrier current) used the AM broadcast band. The disadvantages were crummy sound quality (EMI and 60 hz hum), maintenance (one transmitter for each building with the transmitter in some remote maintenance closet near the transformer), telco lines to feed each transmitter, connection to the building's power grid, limited audience, etc. Basically a big pain in the ass, but a neat project for engineering types with patience. The systems are still in use on smaller college campuses, and transmitters are sold by LPB in 25 and 100 watt versions - which also see use as back-up, sunrise/sunset, and nighttime transmitters for standard AM broadcasters.

>the 1989 World Almanac reports the speed of sound at 1088 FPS at sea level at 32 degrees F.<

Like I said, "about" 1100 feet per second. Sorry I wasn't more accurate, but heck, I did the numbers in my head.

BTW, ammo that falls in this category is the .22 short and .45 ACP, among others. The .380 may also be sub-sonic, but it wasn't a popular caliber with company people when I was involved with this sort of stuff. Properly silenced, a .22 short is almost inaudible with the hammer fall and the slug impact on the target being louder than the muzzle blast. However, due to the very low hydrostatic shock imparted to the target by the lightweight, low-speed slug, most of the guys felt that three rounds were the minimum needed to insure termination.

In some isolated cases this scheme might work. But certainly
not for the whole, which the press hypered and which Nortel et al placed
placed their reputations.

This issue is probably more of PR with desire to raise stock
prices. Did you notice that NO barest details were given at all???
"Interesting slants" are not worth diddly.

If you have a problem with scanners, then what are you doing HERE?
If you ask me, someone making a "private" telephone call is equal to
someone in a crowd shouting out, and expecting no one to be listening to
them. Give us a break, Emilio, and go tell someone else your gripes.

>ScannerBase is put out by CSP-Technologies. They have a web page at:
>http://www.csp-tech.com .

I downloaded the Scanner Base demo, which they say is a full functioning product, but with a limited number of records. The search capabilties are great--far superior that Spectrum. If you want to slice and dice Spectrum in the say way you have to copy it over into another database program, as someone else mentioned.

Scanner Base, however, is a brain-dead product! The one thing you can't do is export the result of your searches into Probe or any of the other popular scanner apps. That makes it useless for anyone who has a computer-controlled scanner.

Source record: 182851

I am looking for a useable (any cosmetic condition, but must work) BC760 or BC890 for a project involving modifying the radio for advanced scanning modes and functions.
Upon completion of the project, the particulars will be posted here for anyone interested. Included will be considered an automatic carrier or voice or data selectable (dry contact) switch for recording, carrier/data/voice selectable detection for squelch, search and scan, voice inversion descrambling, improved bias controlled AGC/AVC, continuously variable scan/search rate and other features. We are considering a "count and send" module which will store freqs from the search mode (a la BC8500/9000).
Thank you,
Bob

Hello. I'm looking into getting a used Uniden BC9000XLT. I would like the radio to come with an antenna, the owners manual, a used or new GRE super converter, a new or used Uniden Pre-Amp, and anything else it originally came with. I would like it to be in perfect working and cosmetic condition. I'm not interested in buying one, but I will trade the following for one:

Cobra 23 Plus Mobile CB Radio
PRO-2026 Mobile/Base Scanner
Kraco CCB-4007C Mobile CB Radio
Cobra HH-35 WX Handheld CB Radio
Cobra Trapshooter 3 Radar Detector

If you would like more information on the above pieces of radio equipment let me know. Please in your e-mail let me know what comes with the scanner and what condition it's in. Thanks for reading!!!

I have obtained a quantity of coaxial cable and am trying to find a good use for it. It is Belden 9207 Twinax------100 ohms-----2 conductors-----.330 inch dia. My question is: What effect on impedance, if any, will tying the conductors together have? Will that halve the impedance value? I think it would make good feedline for a scanner, somehow. Thanks to all.

Hi !

I just got an IC-T22E and I cant find out how to set the scan edges. This
tranceiver can scan beetween 136-174 MHz.
Now it is scanning only from 144-146 MHz. When I try to set a frequenzy
outside this area it just jumps back.
The instruction manual does not give clear information about this.
Is there anyone out there who know what to do ?

K�re

1748. TV VHF/UHF antenna as scanner antenna

Hello All,
I have recently acquired a VHF/UHF TV aerial with rotator. I definitely can use the mast and rotator, but don't have a need for the aerial unless there is a way I can use it or modify it to use for reception with my scanner. Anyone have experience with this or can point me in the right direction for info on using it in this capacity? Any help would be greatly appreciated!
Thanx in advance!

"We are a powerful force in the world"?

Run a perspective check dude - HAMS are looked on, if known at all, by the majority of US citizens as old duffers sitting in a back yard shack, smoking stogies and playing with quaint toys and smelling bad. That sure dosen't sound like a 'powerful force' to me! Try this - go down to your local Shopping mall on a Saturday afternoon - do a survey, see how many people know:

What is Amature Radio?
What is a Ham Operator?
What does 'dit, dit, dit, dah, dah, dah, dit, dit, dit' mean?
What is a 'skip propogation'?
What is a '2 meter radio'?
What is TCP/IP?
What is your email address?
What is your computer's CPU?
What is your ISP?

Now for the 1st four - I'd be surprised if you get many correct replies at all. For the 2nd - I'd bet you'd get a much larger correct sampling!

Right now - you'd get more reisitance to totally banning firearms in private ownership than you'd get by taking EVERY Amature Operator in America off the air.

As has been pointed out - the Ham operators need to get their act together and become a force, rather than a quaint shadow of home brewed research and developoment in the post war era. There is SO much that the Amature service could be doing - just look at all the teenage and college age PC geeks running amok on the net. If radio had half the fascination it used to have - many if not most of these young minds would relish the idea of grappling propogation theory instead of trying to 'phish' passwords. Start by dropping the code *requirement* - increase some of the theory requirements, bring electronics and radio back into the public schools. note: those are just ideas - not "cure alls" - except maybe dropping the morse *requirement*.

Ham is becoming what the Boy Scouts have become - A nice idea that's loosing touch with the current times.

:
:Both Netscape 4.03 and Internet Explorer both come with newsgroup
:filters anfd their offline newsreaders are getting pretty good now.

If you must use a web browser instead of a news reader be aware that
the people who write them know nothing about newsgroups. They seem
unaware that html code is a no no in newsgroups. It is preferable
that people boycott their products so that they will learn but at
least make sure html is turned off to avoid looking like an idiot
and wasting space.

==========
Here is how to turn HTML off in Netscape 4:

1) Start Netscape 4
2) Select menu "Edit, Preferences, Mail and News Preferences"
3) Select tab "Compositions"
4) Remove the check mark for "Use HTML Composition Window"

And at same time check...

1) That "Allow 8-bit" is checked
2) That "MIME compliant" is unchecked

Hi,

I own a Yupeteru 7100, I have had it for about 18 months.

My friend purchased a new one just recently, but comparing the two side by side, on the same frequency, the new 7100 is absolutely deaf as a post, in reception and signal strength.

Is my friend's scanner faulty?

Or is it something to do with the new radio regulations in the UK. CE approved etc.

I have many RS products, including 4 scanners and a couple of shortwave radios. I have only had one problem, I left a handheld CB in my car on a hot day and it melted a bit. I took it in for a repair and got it back in no more than a week.
By the way, should I avoid any car dealerships with their own "repair shop"?
I didn't know servicing your own product was a sign of low quality goods.

1760. Susquehanna County PA Question

Newsgroup: rec.radio.scanner
Date: 1997-10-19 00:00:00 UTC
From: shalom@epix.net
Message-ID: <34496175.16787543@news.epix.net>
Source record: 182750

I was wondering if anyone had a list of the local police officers bage numbers. I am particularly interested in the 47x's (Susquehanna, Oakland and Lanesborro Bourghs).

Thanks Barefoot

I have to agree, but being a former Tandy employee, let me give a couple of tips.

1) all salespeople, including the store managers, are paid on commission for sales
2) repairs are not sales, so they sink way to the bottom of the list of priorities, below cleaning the dust off the tops of the speakers 'cause they might sell better
3) develop a relationship with a store, usually via a purchase, and you will get better service, especially if the manager (the one employee who may even be there next year)
4) if you cannot get quick resolution to a repair (a long repair usually means that the store has not submitted it), give Tandy customer service in Texas. they are most adept at handling problems like this.

however, before doing so, try to imagine what it is like to be in their shoes. the job stinks, management is a joke at best, and most of the customers are either stupid or unreasonable.

97.36% of all statistics are made up on the spot.

That "27%" figure is meaningless, even if it were relevant to the
issue of mandatory code testing, which, of course, it is not.

>I have a scanner with a CTCSS board. It does not read the tones,

There is a lot of digital tone squelch systems out there (DPL, or
Digital Private Line, is a Motorola trademark).

CTCSS boards will not decode a digital tone.

Tones are not assigned by the FCC. They are chosen by the company who
provides the radio equipment, hopefully after they have read the
channel for a while with test equipment and counted hits on various
tones on the freq.

Many times they are chosen arbitrarily, or the same tones are used
that are used at other sites for the same customer.

>Hehehe....hehehe...hehehe. Good Joke!

Hey, I opened up an Xplorer for cellular, and I'm sorry I did.

The damn thing picks up so much garbage anyway that it's near useless, and to have it grabbing all the strong cell signals when I'm trying to sniff a commercial handheld at the other end of a parking lot is very annoying.

One of these days I'll open the thing up and disconnect all the batteries, and hope it powers back up in some default mode with cellular blocked.

Filters in the antenna line don't help much and are annoying to use.

I emailed Opto on this and they blew me off. Probably thought I was asking for back door info on how to unblock the thing.

I like Radio Shack very much. Their prices are a little high (but there is no where else in town with this type of stuff), until a sale and then it's a bargain. I love my PRO-2041, on sale from $300 to $200 (interfaced to my PC), and wish its handheld "sister" the PRO-64, would also go on sale! Also, the 5 year warrenty for $59 is like paying a dollar a month for "insurance".

Hello,

For sale:

Realistic HTX212 2M mobile transceiver, excellent condition with manual, box, etc. $165

Pro43 Handheld scanner, excellent condition. $190

All items include your choice of UPS or USPS shipping. Payment by cashiers check or Postal Money order only. Please Email if interested.

If in fact this action is the policy of RS/Tandy, I strongly urge all readers to let that hugh organization know how we feel we are being treated. They have made their billions by manufacturing products off-shore and selling them to us. It is your (U.S.) dollars that have made RS/Tandy what they are today. Now when we need their support for the products that we bought from them, in good faith, the dollars that made the giant fat - they turn their backs on us. It has always been somewhat difficult and/or expensive for me to obtain service manuals from them for audio, shortwave, video, etc. equipment. . . . . now they pull this stunt?
If it has been confirmed - if it is true.....then let them know. Tell them that your hard earned dollars may go to more friendly retailers. They may think that they have the corrupt and less-than-moral (if not rude) powers of a monopoly; but they are not the only game in town. They need us for survival - we can get along without them. Maybe the fat cats will take notice of threats of reduced dollars for them to feed on. I KNOW THEY WILL.

Source record: 182776

I have done this years ago and the results are fantistic. My antenna was a fringe Channel Master and sometimes the gain was too high: I would get overload when pointed at the station and completely null the signal when pointed away. But that was more the exception than the case. The only thing is that I changed the mounting bracket so I could get vertical polarization. In that case the mast it mounted to had to be 1.5 inch PVC pipe so as to not interfer with the loading and pattern function of the elements.

On the internet? I doubt that John.

The reason for the seemingly endless "debate" (polemics, really) is that some of us realize that the HF phone bands will be lost because the only current beneficiaries of these bands are a bunch of old guys, in spirit if not in body, whose only skill is pounding out 13 wpm.

The arguments that these guys make for keeping the code requirement are really pretty lame:

The last transmission out will be by code (The Tom Hardy Radio-Boy Argument); (We all know the last transmission out will be by cellular telephone);

That morse saves spectrum, (Okay but when was the last time that these guys had anything to communicate anyway, besides how well they were coming in; which antenna works better for them and the date of the next hamfest or fox hunt);

That ham activity is necessary for research and development, (By these guys? They can't even count votes much less solve systems of non-linear differential equations.);

That code is necessary during tornadoes, hurricanes and other emergencies. (Tell it to Channels 2, 5, 7, 9 and 32 who have their satellite trucks at the emergency site).

John, it comes down to the old Greek word: hubris!

Because of Hubris, all of the bands lower down than 6 meters will soon be lost to commercial and governmental interests, who can make compelling arguments that it is in the national interest to remove them from ham radio "service".

The government will also consider transferring 2 meters and 70 cm and sharing use above with hams as the secondary users.

This can be avoided, if we all pull together, it is still not too late.

Nice save, NOT!

Since 720 MPH is appx 1100 FPS, why did you even attempt to chastise
the poster for his 1100FPS claim? Looks to me like the only reason you
came into this thread, was because you thought you could burn someone's
ass with a flamme, and you wound up getting burned yourself.

Yes there is using OCR (Optical Code Reading software) like Omnipage Pro, but this is the wrong newsgroup (this is rec.RADIO.scanner (like police scanners etc.)) try comp.periphs.scanner or alt.comp.periphs.scanner and you'll find lots of information.

This isn't the right forum for that topic, but yes.
If you can get plain text after scanning a document,
then WORD can import that text when you OPEN a file
of some type....the menu window offers a choice of
file types to import. Easy.

Most OCR software these days has a hook so that the
text can be directly scanned into WORD. But either
way gets the job done.

BTW...this forum is for radio scanners; not page types.

The last HAM transmission will probably be by code, if nothing but for old times sake. And whichever old-timer wins the right to make that transmission will be proud of that moment for the rest of his life.

But, civilian radio is here to stay. Trucking companies are using meteor scatter to communicate, cell phones are going to digital voice (something that hams could and should have done years ago, here we are using DSP's to convert our signals from analog, to digital, back to analog, back to digital, and finally, back to analog)

> That morse saves spectrum, (Okay but when was the last time that these

It wastes space, because it ties us mentally to antique modes and operating practices.

R&D in Morse code?!!!?

> That code is necessary during tornadoes, hurricanes and other
emergencies.
> (Tell it to Channels 2, 5, 7, 9 and 32 who have their satellite trucks at

Necessary for what? In an emergency information must flow rapidly, not in the slowest mode available.

>
> Because of Hubris, all of the bands lower down than 6 meters will soon be
> lost to commercial and governmental interests, who can make compelling
> arguments that it is in the national interest to remove them from ham
> radio "service".

Not likely, with current trends it would be hard to give the HF bands away. Instead they will e closed to hams and will sit empty, kind of like most

of them do today (if you doubt that they sit empty then go to tour HF rig right now and see how many conversations are going on. 20, 40 considering the capacity, that's empty)

> The government will also consider transferring 2 meters and 70 cm and
> sharing use above with hams as the secondary users.

A very real threat, one thing that would help here would be to increase the use of simplex. Putting everyone on a half dozen repeaters causes the impression of crowding to the users, while, odd as it seems, making the band appear relatively unused.

1795. *****RADIO GEAR FOR SALE*****

Newsgroup: rec.radio.scanner
Date: 1997-10-19 00:00:00 UTC
From: heatwole@clark.net
Message-ID: <62dd7f$n4@clarknet.clark.net>
Source record: 182785

I have the following radio radio gear for sale. All are in very good cosmetic condition and are in perfect working condition (as far as I can tell). Buyer pays the shipping. Let me know if interested.

Cobra 23 Plus Mobile CB-
40 AM Channels, LED signal strength meter, LED channel display, 3 NOAA Weather channels, handheld electric microphone, owners manual, TX/RX indicator, mounting bracket, volume, squelch, channel selector, schematics diagram, and built in speaker

Kraco CCB-4007C Mobile CB-
40 AM Channels, instant channel 9, mounting bracket, owners manual, optional PA feature, handheld microphone, volume, squelch, channel selector, schematics diagram, TX/RX indicator, LED channel display, and built in speaker

Cobra HH-35 WX Handheld CB-
40 AM Channels, full 4 Watt power, rubber duckie antenna, 3 NOAA weather channels, built in electric microphone, volume, squelch, channel selector, built in speaker, original box, LED channel display, owners manual, batteries, wall outlet battery charger, hi or low power selector, and cigarette outlet power supply cord

PRO 2026 Scanner-
100 memory channels, delay feature, scan and search, built in speaker, mounting bracket, home stand, priority feature, lock out feature, manual feature, 1 touch weather, marine, fire, air, and police bands, volume, squelch, and original box

COVERS: 900 and 46 MHz cordless phones, NOAA weather, almost all law enforcement, 10, 2, and 6 meter HAM radio, AM aircraft, VHF lo-band, VHF government, government, VHF hi-band, UHF hi band, UHF lo band, stuff in 800 MHz

Cobra Trapshooter 3 Radar Detector-
City feature, mute, built in speaker, owners manual, volume, dim feature, signal strength, cigarette outlet power cord, windshield mounting bracket, detects X, K, and Ka radar

I would like to sell all of the above as one. I�m asking $250 plus shipping for all. Please e-mail if interested. I will trade for a BC9000XLT with Uniden pre amp and a GRE super converter. Thanks for reading!!!

at 20
>>wpm shows that the individual has mastered skills and abilities in this
hobby
>>and truly deserves to be an Extra class.

There are a lot of people who demonstrate a lot more dedication and
achievement than copying morse code at a high rate of speed. What about
the people at TAPR, who brought packet radio (digital) to the Ham
community? What about Spread Spectrum that they are working to bring
into the community currently? Enough acievement? Did you know that if
they haven't learned to copy morse code, then they couldn't even use SSB
on HF? What about the folks at AMSAT who continue to fund and launch
satellites bringing that mode of communication into our community since
the EARLY 60's!?!?!?

I think those people with their dedication are far more deserving of
laurels than some person who learns to decipher the dits and dahs at a
high rate of speed? If the means of incentive licensing is to reward
Hams for technical achievement, wouldn't anyone who helped bring the
hobby forward technically (like TAPR, AMSAT, etc.) be more deserving than
someone who learned to circle the right answers on a multiple guess test
(whose questions and answers are PULBIC DOMAIN?!?!!?) and learning to
copy morse code at increasing rates of speed?

Perhaps they should make the "Advanced" and "Extra Class" levels that has
to be earned with a specific positive CONTRIBUTION to Amateur Radio and
scrap the whole high speed code test and written test?

>> All sounds pretty fair to me. The way I see it, the people who are
>>complaining the loudest about the code test just seem to be too lazy to
expend
>>the time and effort it takes to learn the code. It's NOT that

difficult, it
>>just takes a little time...

What is so special about CW? I think someone should demonstrate knowledge about different modulation schemes used on HF -- like describe in words how SSB is generated, etc.

Actually, Clay, please keep up with the times, CW is being abandoned by
ship to shore in favor of digital and voice modes.

Either way, when the regs were made about 90% of the world traffic was in
CW. You HAD to use CW or no one could talk with you! Now it is a mode
of communication that is falling out of use.

ability
>to put out the small effort to join the "elite", and thus the amateur
>community is probably better off without that person.

Actually, when the original 5wpm competancy was required by the ITU is
was because just about all modes of communication were CW. It has since
evolved into a "gatekeeper" function which has little to do with the
actual radio practice. A test on how one generated SSB or a simlated
interchange displaying the proper technique would be more helpful in
typical operation.

CW doesn't have to be your only "practical" demonstration of technical
merits.

Your attitude of unwavering conservatism is what will eventually kill
amateur radio. There is world-wide spectrum shortage that a lot of
companies would LOVE to get a few slices of under utilized HF spectrum!
They have more $$$ than we do and our only defense is that the bands we
have are being used.

I take issue with your statement that " ... the amateur community is
probably better off without that person. " describing someone who doesn't
want to take CW tests for HF access. The kinds of activities that are
the future of amateur radio are being done with people who probably have
no CW certification, like:

1. TAPR, which is bringing SPREAD SPECTRUM to the Amateur community (and
brought Packet)
2. AMSAT, which since the 1960's has put up comminucations satellites on
a SHOESTRING!

>I can't help but think that the people who want to "open up" Ham bands

No, I think due to the restrictions and lack of privacy I doubt that is their motive. I just think that most people who want access to non CW modes on the HF bands think it is silly to have to not only learn CW, but to have to learn it at greater rates of speed to have greater voice priviledges!

And, since when has CW been a display of TECHNICAL competance? How many CW operators could design and build the rigs they are using? Really!

Since I am not too keen on lengthy discussions of someone's kidney surgeries and arthritis (having been a SWL for years!) I will stick the the more exciting VHF, UHF and Microwave bands. For international communications I will either use satellites or the internet!

HAMFEST October 26, 1997 Lindenhurst, LI

GREAT SOUTH BAY AMATEUR RADIO CLUB
LONG ISLAND HAMFEST-COMPUTER SHOW - OCTOBER 26, 1997

LINDENHURST, LI - NY

On October 26, 1997 the Great South Bay Amateur Radio Club will again sponsor an indoor Hamfest-Computer Show. The location will be at the Knights of Columbus Hall located at 400 South Broadway, Lindenhurst, NY. This is an ARRL approved Hamfest.

There will be radio equipment, electronic componets, computers and access-ories, softeware, books, technical manulas, ARRL information, Amateur Radio License Exams and information. General admission is $ 6.00. $5.00 with coupon. (Coupons will be available at the door.)

For exam candidates please remember to bring your original FCC Amateur Radio license (if licensed), any C.S.C.E. forms that are pending, plus a photocopy of each, pens, calculator, formal form of ID (preferably photo ID), and the examination fee, to the exam seesion. 1996 ARRL/VEC fee is $ 6.25, exact change is appreciated. Novice exams are free.
The VE team is from ISLIP ARES Group and GSBARC. Thanks guys.

For vendor and additional information pleas contact, Walter Wenzel KA2RGI at (516)957-0218, or Tom Carrubba KA2D at (516)422-9594 during EVENING HOURS ONLY (7PM-10PM). NO TABLES WILL BE RESERVED WITHOUT PRIOR PAYMENT due to the limited space available. Tables are 2.5ft x 6ft.

Talk-in will be via GSBARC Repeaters on 146.685 4Z(136.5) PL and 223.86 OC.

Food Service during the Hamfest will be provided by members of the Knights of Columbus Council.

Information is also available during the GSBARC 2 meter info net every Monday evening at 7:00 pm on the W2GSB repeater, 146.685 -600 4Z(136.5) PL required. You may also write to:

So the radio gets put inside the PC, one of the worst RFI enviroments known? With a serial interface, one has the option of getting the radio away from the PC.

I'm curious, why should 115k be considered slow? How much information has to get passed back and forth? Just tuning commands I would think.

Plus, with a serial interface, the possibility exists to connect the radio to machines other than peecees. Or laptops w/out an ISA bus. (BTW, in a year or two, Micro$oft will supposedly refuse to allow machines with ISA slots to use the Windows logos. They are trying to kill of ISA as quickly as possible, as it has become such a configuration/compatability headache for them.) [note, I am not saying that ISA has to be a headache, only that Micro$oft apparently feels the way they've implemented it is]

Well, I put off cutting back my tree branches, and they've subsequently demolished my RS discone. The '98 catalog lists the new "improved" discone as well as another 100" dipole that comes with 50 ft. of coax attached. First of all, does anyone know what type of cable it is? For the price, I'm guessing RG-58.
I'd appreciate any input regarding the relative merits of these. Or perhaps a suggestion as to a better, reasonably-priced non-RS alternative. (I wanna keep the cost under $100.)

Sorry Charlie - why should I tossup $200 to $300 over a conventional scanner just so I can use my mouse to tune it? Talk about OVERPRICED!!

And you further question my intellect by telling me that a $20 discount off a near $600 item is a 'substantial discount'? - get real. Tell ya what - you offer this thing for a price that's competative with a hand held of similar spectrum and you'll drop your drawers at the surge in sales!

AND then to top it off - YOU SPAM USENET WITH YOUR AD!!

Suckers - whatever chance you may have had - you've struck out - totally.

****

Following is from: http://www.winradio.com/home/order.htm

Please send me one WiNRADiO WR-1000i receiver
and debit my credit card the amount of US$564,
including shipping and insurance. I understand that
this amount does not include any customs duties if
applicable.

WiNRADiO Sales wrote:

So what conventional scanner can I buy for $200 to $300 less that matches
WinRadio's features?
>
> And you further question my intellect by telling me that a $20 discount
> off a near $600 item is a 'substantial discount'? - get real.

I understand some US dealers are selling it for $500.

> Tell ya
> what - you offer this thing for a price that's competative with a hand
> held of similar spectrum and you'll drop your drawers at the surge in
> sales!

Yes, and Boeing would sell lots of 777's if they were priced competitive
with Cessna's.

First you need to compare it with a Base model not a handheld. So what is
your choice for a comparable computer controlled base scanner with the
same spectrum coverage? Don't forget to include the price of software
also.

> AND then to top it off - YOU SPAM USENET WITH YOUR AD!!

AND to top that off YOU ADD another WinRadio web address and repeat the
original ad you whined about!! YOU SPAMMED THE USENET MORE THAN THEY
DID!!!

> Suckers - whatever chance you may have had - you've struck out - totally.

Yea, but your spam probably gave them 100 more customers if.

You are so funny I will repost your reply. Now we both have spammed the
USENET more than Winradio has!!!!

There may be a better solution, but a few years back they used to
manufacture a "Cb standby" switch, which would cut back on your
stereo, and play your cb whenever a call came in.
The local shack here still has a few I think..I'll look and see in a
day or so. (any excuse to get to the goodies store :-)

If the PCS is the 1900Mhz CDMA type, it will not be able to be heard. That is part of what makes the 1900 Mhz CDMA PCS. Secure communication.

What about running it down the main transmission lines? I'm talking about the lines at the very top of the pole, uselly about 3 lines are together. The transformer picks power up off of these lines, and they are "un-interrupted" by transformers for a greater distance the the house lines.

Although I have been following the thread regarding the discontinuance of sale of service manuals with for scanners capable of receiving the 800 MHz band, I have never seen the original documentation(s). I have great interest in knowing what the original findings and decisions of RS were regarding this matter.

Would someone kindly re-post with an e-mail copy to me for my reference?

Thanks in advance,

1837. Re: San Diego map codes

Newsgroup: rec.radio.scanner
Date: 1997-10-20 00:00:00 UTC
From: bud.jamison@thekat.cts.com
Message-ID: <971020160001940@thekat.cts.com>
Source record: 182628

-> From: fish@adnc.com
-> Subject: Re: San Diego map codes
->
-> Our maps are on a horiz-vert grid starting at the SW corner of the
-> city with Map Page 0101. The next east would be 0102, the next 0103,
-> etc. The next north would be 0201, etc. The A-K coord. is again W t
-> E and the 1-8 goes S to N......hope this helps out!

The lowest page number for San Diego Fire maps is 0126, at Border Field State Park and the Mexican Border. It's all the hydrant locations that make the fire maps so valuable to firefighters, not the scale. In fact, I'll bet all engines and trucks have Thomas Bros. maps on them too, to make it easier to GET to a a scene that's out of their district.

:)

-> John Fisher
-> Firefighter/Paramedic
-> San Diego Fire and Life Safety Services

Give my BBS a call, 277-4140. I listen a LOT to everything around San Diego, especially fires. I tip TV and radio stations.

The transmit band is seperated into 5 & 15 MHz blocks, from
1930 to 1990 MHz. There is also 60 MHz worth of RX band below
the TX Band, below a guardband.
Each carrier is digital spread spectrum, with a 1.25 MHz bandwidth in
the case of CDMA. TDMA providers tend to have more in-band carriers
with
a smaller bandwidth.
Unlike AMPS (analog FM 850 MHz), a single carrier contains more
than one subscriber's conversation.
It will be a very long time or never before "boxes" become available to
"listen" to PCS calls. Encryption is easy as pi to implement.

I love seeing any real bulletin about the availability or cost of a newly marketed radio. Especially one as novel as that one.

Repetitive spammed radio ads would be a bit crude, but I get way more trashmail in my email in-bin than any of these newsgroups has. Many thanks to the spam cleaners! Actually this is a viable case for beneficial cross-posting.

Now, if WiNRADIO Sales just posted an ad, and didn't stick around and contribute or participate or answer anything posted to the thread, that's a different story. Then they would deserve you calling them bozos. But that's not the case this time...

Now is a good time to post your feedback about the radio to them. Take advantage of it while they are listening to you, Gene!

10/20/97

I have a Yaesu FT-2400 2 Meter rig in EXCELLENT CONDITION, complete with
DTMF backlit microphone, original box, manual, mobile bracket, etc.
It is switchable power, 50 Watt/25 Watt /5 Watt and has 31 memories
plus a one-touch instant recall CALL channel. Has large backlighted
LCD display that can be numerical or 4 character alpha display. I just
had a new lithium battery installed for the memory backup. In case
you don't know it, the FT-2400 is full Mil-Spec for shock and vibration.
It is a very rugged unit. I'll sell it for $230.00, which includes
shipping inside lower 48 states. To purchase, leave Email and send
check or money order to me: Darryl Linkow - KE6IHA

It's actually pretty simple! So simple, I guess I shouldn't feel guilty
for telling an admitted criminal how to do it...

poltergeist@mailexcite.com wrote:

> Sorry about this but I'm a criminal and I need
> to listen to some scrambled transmissions.

Frankly, this makes more sense than the typical scanner-geek just being
nosy! You certainly have anunderstandable reason for wanting to decrypt the
transmissions, and I commend you, sir, on your
forthrightness!

> *** Exactly how is voice inversion descrambled??
> *** Is it hard because there's more than one way??
> If anyone can tell me or provide links please
> reply or feel free to email.

OK, here's the part you've been waiting for. My only fear is that
--because the solution is so simple-- you'll disbelieve what I'm telling
you.

But you can do a little experiment which will prove I'm right. Stick
your face under water the next time mommy gives you a bath. With your head
under water, try talking. It'll sound like you're using a scrambler!! Mommy
will be astounded!

So, my friend, the answer to your quest is simple:

Next time you think the po-po is after you, and they're using scramblers,
quickly turn up the volume on your scanner, and thrust the scanner into a
large bucket of water! You adjust the clarity of the audio by varying the
depth the scanner is at. Some preliminary studies conducted by the
prestigious RF engineering firm Cheek, Douglas, Vanhorn, Mental-Ward &
Ravin-Craven Associates, Inc. (under NSA contract) seem to show that water
temperature might also effect clarity of the decoded audio.

Wishing you the best,

LL-Cool Big-Mack Sugar-Daddy O.G. White Boy Hoolie,
giving a shout-out to my peeps from the streets of Detroit

>>
>>Thanks

I believe Shibumi is speaking about our road map codes, not the trunking system codes. You're right, we don't use the TB Guide. We use a proprietary map with a much larger scale, I'm guessing about four of our map pages to the Thomas Bros. page. Most FD's in the area do this. Many of the smaller cities acutally have each and every address on the map. Due the geographic size of SD this in impossible.

Our maps are on a horiz-vert grid starting at the SW corner of the city with Map Page 0101. The next east would be 0102, the next 0103, etc. The next north would be 0201, etc. The A-K coord. is again W to E and the 1-8 goes S to N......hope this helps out!

It is true. I have confirmed it with RS. Write them if you are in
doubt. They will send you a note telling you that they are following the
FCC "requests".
I am not buying JACK from RS unless they change their minds about this
issue of service manuals with schematics being banned from the public.

> Both. Add another, jerk, for a total of 3.

None, its our wonderful "New Democrat" Bill Clinton who loves to ban
things.
Look at this list of bans he and other democrats have put into law:

1. Radar Dectectors
2. The Brady Bill limiting gun purchases by the citizens who might
need to defend their own lives or property from those who break the law,
and therefore, do not abide by any such rule.
3. The Assualt Weapons ban. A bill limiting the right to purchase
ugly, small calibre rifles. But, any law the removes the peoples right
to keep and bear arms is a good law to all dictators.
4. Expansion of the Brady bill to keep anyone with ANY kind of
conviction for domestic violence from having the right to own a
handgun. This is not upheld by our Constitution. Only those who
have commited felonies are not allowed to keep and bear arms according
to our wonderful Constitution, but dictators do not give a damn about
minor issues like that!
5. Attempts to ban the usage of tabacco/extort money from the tabacco
producers.
6. The current occupants of the White House are socialists who hate
property rights. So, how do you overcome legal restrictions that keep
the government from regulating your property? You simply use a leftwing
group like the EPA to write new rules that do not have to go before
Congress. These new rules will greatly restrict your usage of your own
yard.

So, the quesiton is this: How much longer will we be free in America?

We all need to do our part to stop losing our freedoms! Spam is free speech in action. Though you may not like it, it is nothing more than the kind of junk mail you get in your real mailbox at home. Fewer limitations are what Americans need! If we try to regulate everything that we dislike, freedom will not exist here ever again.

CW is just a means used to exclude others. Its really nothing more
than that. The feds do not want a lot of people involved in HAM
operations, so they keep them out by using high CW rates.
Wake up and smell the coffee. It would make much more sense to test
for ones ability to use computers and design antennas, transmiters, etc.
rather than test for some ancient mode rarely used by anyone!

>speed of sound at sea level is something like 720 FPS.
#
I realize that I'm using an old reference source, and that the physics
might have changed with better technology, but the 1989 World Almanac
reports the speed of sound at 1088 FPS at sea level at 32 degrees F.
#
Hmmm, but lets run with your numbers...
#
720 (FPS) x 60 (per min) x 60 (per hour) = 2,592,000 FPH
#
2,592,000 (FPH) / 5280 (FPmile) = 490.9 MPH
#
SPEED OF SOUND = 490.0 MPH
#
WOW! I thought it was much higher than that. Maybe someone
ought to call up those folks with the really fast car over on
Black Rock Desert and tell them they went closer to mach 1.5

I have updated Montreal area amateur repeater (2m, packet,
440, 6, 220, 10m, beacons) directory, and there are more than 88
repeaters listed with detailed information including

- frequency
- offset
- CTCSS
- English/French
- Autopatch
- Location
- Link to
- Operated by
- Repeater ID
- 1W HT from downtown Montreal
- Weekly / Daily Net Info

There is also a link to the list that shows all VE2 + VA2 repeaters
here in Quebec.

It's at:

http://www.radiotelephone.net/amateur/

http://www.radiotelephone.net/amateur/repeater.htm

Please send me your comments and questions so I can make necessary
changes to improve.

IS WE FREE NOW, Massa? Didn't dey force the companies to SELL PARTS to us little folk techies a few years ago, didn't dey git sued & had to then sell us GOD CREATED creations parts? Did this suit include manuals too? IF NOT, it is time to SUE RADIO SHACK OR tell ALL to quit buying their OVERPRICED TRASH like I have been doing since '72 !!!
Radio shack is just a bunch of Commercial Babylonians, and dey don't FEAR GOD or do anything that's rightous, do they? Maybe we should have them sued fow dem to sho cause why dey shouldn't lose dare corporate charter (failing to promote a public interest!).
(I knows how to spell the Bill of rights {The 1st 10 Amendments to owr US Constitution dat dey don't OBEY today!}. I even go to a dinner in honor of them around Philly on Dec. 15th of each year. Friends of mine put it on so we can remember what the massa wants to take away, so dey can kill us !)
Dah way I look at it, dey can have my CB's & everything else when dey pry them fom my cold, bloody, dead hands! Dah Bill or Rights secures GOD GIVEN Rights! Dey don't come from da goverment!
Dave

Yes, its more of a reciever than a scanner. Check out the TDA700 chip
before the feds make TI stop selling it. ITs a great chip! Someone may
know of a better FM reciever chip. If they do, please post the info and
send me a note about it please!

Well, I took a computer to RS one time and it took them a days and
days to figure out the problem and fix it! Afterwards, they handed me
the bill and you would not believe how expensive it was after they had
kept the computer for such a long time!

1890. Baseband audio on a Pro-2004?

Newsgroup: rec.radio.scanner
Date: 1997-10-20 00:00:00 UTC
From: wbagley@ibm.net
Message-ID: <344b8d9a.14199778@news-s01.ny.us.ibm.net>
Source record: 182704
Cross-posted to: alt.radio.scanner,rec.radio.scanner

I'm trying to get a baseband audio output on my Pro-2004. I found a list of discriminator chips from Bill Cheek that shows the TK-10420 pin 9 as the right place on this scanner. The list also shows it as TP4 (Test Point 4). TP4 is a lot more convenient than the chip itself but I don't seem to get a signal off of it. Is pin 9 really connected to TP4 or is it actually TP2 perhaps which is a lot closer physically? Anyone with a service manual that could check?

Also, does the baseband audio need to be coupled through a capacitor for use with a soundcard or data slicer?

Thanks,

Bill

1891. Car speaker for handheld scanner

Newsgroup: rec.radio.scanner
Date: 1997-10-20 00:00:00 UTC
From: bkane@rice.edu
Message-ID: <344b9942.14498997@news.rice.edu>
Source record: 182705
Cross-posted to: rec.audio.car,rec.radio.scanner

I have a PRO-43 handheld scanner that I use mostly in my car. Currently, I use the scanner speaker at full volume (to overcome the car radio and other noise). As a result, the speaker went bad and I have just replaced it.

When the scanner picks up some traffic (infrequent...being used for VFD dispatches), I would like to have the scanner sound piped through my car stereo, cutting out the radio station (or tape) I am listening to. (The stereo is Ford's premium sound system, in a 1993 Mustang.)

Is this feasible? Or is my only course of action to rig up some sort of external speaker? If the external speaker is the only route, does anyone have any recommendations on a small powered external speaker that would work well?

Thanks.
Brian

I was successfully resisting getting into this mess until the above
appeared. Good Heavens, man, ham radio is a *hobby*. If you are not
interested, get a cell phone. No tests and few restrictions. If two meters
continues to regress toward CB with the "new" hams (yes the truck drivers have
found it now) operating there, I'll be leaving it, too.

First off does your stereo have a lead for muting the radio when a cell phone rings. If you have a wire marked TEL MUTE or something like that then I should be able to do something.

Otherwise pick up a powered speaker at Radio Shack.

It is amazing how often people accept the statistics they like and reject
the ones they don't like. Probably happens more than 52.9% of the time.

Certainly some monitors (especially the cheaper ones) can be extremely
noisy. However, the inside of a PC is a zoo of EMI. I design precision
instrumentation, much of it PC based. The inside of a PC is one of the last
places I want my circuitry to be. (Though sadly it must end up there many
times) And I have the luxury of dealing with low bandwidth (<100 Hz)
signals, so I can heavily and intelligently filter them. Not true with an
HF radio. How many "birdies" are going to show up due to oscillators in the
PC? (BTW I have a Mac, and have far less RFI problems than when I had a PC
near the radio. Curiously, I'm using the same monitor)

>This old wive's tale goes way back to the days when
>computers weren't designed with RFI/EMI in mind. The
>story is a lot different in this day and age.

No, it's not. Most PCs are extremely poorly designed. Don't forget, when
the EMI tests are done for FCC/CE mark, the boxes are all tightly screwed
shut, with high quality external cables (to the monitor, etc). A far cry
from what is usually actually sold. A lot of hams have PCs that are
practically homebrew, with an assortment of boards bought at hamfests.

Far less so. I can use a serial cable with proper shielding. If I'm serious, I'll use an opto-isolated interface. Have you done any serious instrumentation before?

>
>> I'm curious, why should 115k be considered slow?

Irrelevant. Why do you need to move that much data around? Besides, you'll never realize the 8 MHz theoretical maximum of an ISA bus.

>Especially when you are sending and receiving data.

Nonsense. 115k is quite do-able. I do it all the time. If you're only getting 9600 baud, you better upgrade that XT. (In fact, I regularly did 38400 on an XT)
Again I ask, what huge amounts of data do you need to slosh back and forth between the PC and radio card?

I'll whip up a Mac interface in a week. Give me the protocol (so I don't have to reverse engineer it), and I'll do it in less time. I'm sure Icom would love to offer Mac support as well.

I'm not sure that capacitors only will do the trick. Power companies purposely inject kilowatts onto their transmission lines for the purpose of controlling oulying substations, large irrigation systems, etc. However, they are prevented by law to inject anything over 100kHz. I can see why, otherwise the whole world would hear them.

I have worked on such injection units before, and , yes they contain a capacitor divider, but they are also tranformer coupled to the line. Transformer has high isolation. Coupling capacitors need to have low reactance at the frequency of interest, and high reactance at 60Hz. Some pwoer companies even have voice phone circuits at their remote substations that talk over power line carrier current. It is possible, but be VERY careful...Study the electrical engineering practice handbooks, and american utility practice boosk before you attempt something like this. Also, the power company involved will be highly PISSED if they catch you!!!!!!

David,

I'm no fan of Clinton's, although I do agree on most social issues such as abortion and gay rights (not gun control, though), you've got to remember he's hardly the first to use the IRS against his political enemies. One of the most disturbing revelations from Watergate was that Nixon had ordered the IRS to audit hundreds of democratic bigwigs in hopes of digging up some dirt.
The abuse of power is something both parties have mastered quite well.

<cps-ya02408000R1910971600070001@news.digex.net>...

> So the radio gets put inside the PC, one of the worst RFI
> enviroments known?

Are you aware that this is an old wive's tale? Inside a PC is
a whole lot cleaner than around a monitor. And if the body
of the radio is adequately shielded and if the power supply
and data lines are properly bypassed, and if the antenna is
installed where it belongs (outdoors, high as possible) then
the PC will not contribute to the RF interference normally
detected by the receiver.

This old wive's tale goes way back to the days when
computers weren't designed with RFI/EMI in mind. The
story is a lot different in this day and age.

> With a serial interface, one has the option
> of getting the radio away from the PC.

Not really. The serial cable becomes a part of the PC, and
it it happens to be resonant, then look out, dude! Even if
it isn't resonant, the wires and shield in the cable can
conduct RFI to the interface and the radio. No more so
and no less so than WiNRADiO inside the PC.

> I'm curious, why should 115k be considered slow?

Slower than molasses in a winter blizzard....compared to
8 MHz of the ISA bus.

> How much information has to get passed back and forth?
> Just tuning commands I would think.

If that's all you do is tune back and forth, then yeah. But
you can use a regular radio for that. If you take your radioing
seriously and want to do a lot more of what CAN be done,
then it takes a radio designed for that purpose. Serial
connections are fine and dandy at the DCE speed, but
somehow, I doubt many RS-232 radio interfaces go that
fast. More likely it's 9600-bps so as to allow for IRQ time
without losing data. Well, 9600-bps is slow. Very slow.
Especially when you are sending and receiving data.

> Plus, with a serial interface, the possibility exists to connect
> the radio to machines other than peecees. Or laptops w/out
> an ISA bus.

True about the mobile or portability aspect. But not true about
other computers particularly. At best, MAYBE...depending if
someone chooses to write software for it. As I understand it,
the ICOM PCR-1000 run only on PC's under Windows..... and
at 20-ch/sec, too. If the API is open architecture, then someone
else can try to port it to a Mac, say. But don't hold your breath.

> (BTW, in a year or two, Micro$oft will supposedly
> refuse to allow machines with ISA slots to use the Windows logos.
> They are trying to kill of ISA as quickly as possible, as it has
> become such a configuration/compatability headache

Not true. There is so much legacy hardware around that it
will be well into the 21st century before ISA disappears, and
even when it does, there will be plenty of cheap ISA machines
still around, and by that time, WiNRADiO will be PCI, or USB
or otherwise up with the times.

> for them.) [note, I am not saying that ISA has to be a headache,
> only that Micro$oft apparently feels the way they've implemented it is]

Well....I have ties to Microsoft and there is no word of anything
like that other than just talk of the distant future. Intel will
have to get in on the bandwagon as will Cyrix, AMD and a
host of others.

I agree, ISA is on the way out. But not soon.

hi,brian
i've had this problem before too!
check to make sure the strip between the lcd&the circuit board is lined up.
if not its ok to remove the lcd very carefully. and light reflector from board.
there is a strip about 1/4 inch tall that conducts the info to the lcd try
cleaning with a q-tip and isopropyl alcohol also clean lcd contact strip and pc
board strip
this should do the trick

1907. need help -w- 2006 discriminator output

Newsgroup: rec.radio.scanner
Date: 1997-10-21 00:00:00 UTC
From: lyd <lyd@interaccess.com>
Message-ID: <01bcde48$cf926260$2a01a8c0@went>
Source record: 182521

I'm trying to use dtmf decoder software with my pro-2006 and pc soundcard.
The software documentation recommends taking output straight from the
discriminator on the receiver.
I located info on the mod with no problem-

http://homepage.dave-world.net/~woody99/2600/dis.htm
http://ecco.bsee.swin.edu.au/chronos/metsat/cheekmods.html

-but I seem to be missing something.

I used test jumpers to make connections as required, (IC2, pin 9 and TP2)
and patched that
signal though to my soundcard. The result is not what I expected. When I
connect the leads to
the soundcard in one polarity I get a loud hum (60Hz?) and hear a very,
very faint audio signal
beneath. If I reverse the polarity, the hum goes away but the signal is
just as faint.

The software docs sound as if I should just have to plug discriminator
output straight to the line-in
on my card. Can anyone offer any suggestions?

lyd@interaccess.com

I've seen WEB pages from Canadian amateur equipment companies that will sell Canadian scanners to the US, such as ICOM and AOR, with complete coverages, no cell blocked frequencies.
Are these illegal to even own in the U.S.??
My dual band HT radio is cell blocked, but, I can pick up dozens of cell phones in the 900Mhz range. Does that mean it is illegal too since I can monitor cell phones??
Thanks,
AL

Hi I will lend out my beloved pro-2006 service manual to anyone in the continental U.S. for a $50.00 dollar security deposit delivered to your door or $75.00 U.S. dollars anywhere else on the planet to your door step. I have only one copy!! So first come first served I guess.. I am really worried about not getting my copy back so that's why I have to charge a fee. Besides copying it would be illegal which is bad. So if you can't get a copy from RS or anywhere else I will lend you mine. No problem and no questions asked. Please return it!! :-) If it doesn't get returned I guess I'll have to deal with it but it won't be easy.
Mike

No, the transformer is not bad. If it were, you would not
be able to put in any frequencies at all. That scanner
uses a chip called a ER1400 I believe from memory.
Mine is not as good as the scanners memory. Anyway,
that chip requires NO voltage to store memories. The
manufacturer of the chip has told me that you could
program it, pull the chip out and leave it on the shelf
for 14 years, and plug it back in and away it would go.
I have not tried this (naturally). Your problem is else where.

Regards
Reed

In theory, you could splice in some kind of auto-switch, like the ones you
can use to share 2 printers on 1 parallel port, however, since you have the
factory sound system installed, doing that would have unpredictable and
possibly disasterous results since Fords' stereos are so touchy (I've fried
several over the years; they just don't like to be tampered with). I prefer
my much simpler solution: I bought a cassette adapter intended for use with
a portable CD player. The mini-jack will fit into the earphone jack of any
handheld and then you just pop the cassette in like any ordinary tape. With
your pro43, you will only get audio out of one channel, but with my uniden
230xlt, it comes out on both channels, loud and clear. I keep the scanner
volume just a hair or two above silence, and then adjust the car stereo to
a good level. This considerably extends battery life as well. Combine that
with a cigarette lighter adapter to power it and you can go mobile
indefinitely.

1915. Re: WiNRADiO: A Special Promotion

Newsgroup: rec.radio.scanner
Date: 1997-10-21 00:00:00 UTC
From: WiNRADiO Sales <WiNRADiO@san.rr.com>
Message-ID: <01bcde5e$ddbeeaa0$250bd2cc@bench.san.rr.com>
Source record: 182529
Cross-posted to: alt.radio.scanner,rec.radio.amateur,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

The bespectacled, bucktoothed, malevolent Michael Alexander
(malexder@aol.com) besmirched to society thusly:

>> Firstly, let's remind these bozos that commercial ads are not welcome in
>> these NG's.

> Sorry to offend - it was not intended, but the pricing was
> purposefully omitted to keep the post informative and in the
> nature of an announcement.

> That's a load of crap.

Oh goodness! Really now? You are an expert in "crap"?

> You posted an ad.

No, I didn't. I posted an announcement. Some people liked it;
some didn't. It would be the same if I posted a notice for
free widgets. Some would like it; some wouldn't. Tough.

> Omitting the price was a lame attempt to get around the widely
> held view that commercial outfits ought to keep their ads out of the
> newsgroup.

No. It was an effort to compromise. Very overt; not subtle.
Plain and clear. Simple. Succinct. To the point. You just
didn't like it and took it upon yourself to be judge, jury, and
executioner. Guess what I think of judges, juries, and
sanctimonious executioners? We'll not get into that right
now.....but we can later, if you like.

> Optoelectronics, Icom, AOR etc. etc. don't spam us,

Who is "us"? And what do you think their shills do here?
They work under the table and you say nothing about it.
So are you permissive - or oblivious? Or just nescient?

> what makes you so special?

You. You just did. <grinning>

>> So anyway it is a bummer that you are offended (and offensive)
>> but you are free to stew or accept it as you please. Obviously,
>> all the people cannot be pleased all the time. Sorry.

> You have a stunning grasp of public relations.

Should I have NOT apologized? Or not have been truthful? You
are offended, too, I see. What can I say other than "Sorry", and
to acknowledge the truth that some people like one thing and
some like another. You chose to be offended. Bummer. What
to you want - a cookie or a kick in the arse?

Either way is too bad for you, I guess. How else can it be truthfully
put? Would it be better if I minced my words; gilded them with lilies
and tulips; and sucked up to you with begs for your benevolent pardon?

"Ooooooooooohhhhhhhhhh puhleeeeeeeeze, Mister Alexander,
puhleeeeeeeeze don't punish me, puhleeeeeeeeze, sir?"

Yeah, rrrrri--ght. <grinning even more>

>> Is it possibly because you can't afford one and got yourself a case
>> of sour grapes? Aesop told a story about that syndrome a few
>> thousand years ago. Apparently it remains a common malady.

> I can afford one (actually, I can afford many) but I would not buy that
> overpriced piece of garbage for half the price. A computer controlled
scanner
> (I have two) is a far superior alternative, for only a few dollars more.

Really now? My goodness, you certainly do have your opinions.
And you certainly are entitled to them and even to voice them.
And, of course, you did. And I humbly thank you from the bottom
of my heart for your valued and most carefully considered reply.
You certainly are a gentleman and a scholar and seem not to
mince words yourself. Apparently you don't like it when others
are as direct and to the point, though. But that is a personal
problem. Sorry - I can't help you with that - not without a hefty
counseling fee, anyway. <tittering>

>> Now you begin to stray from pure candor. Most Pentium PCs have
>> four ISA slots, and many of those use external modems and......so
>> what's your point about picking on the fractional minority situations?
>> Men's rooms don't ordinarily offer "sanitary napkins", either. So what?

> Pphff--you stray from candor too.

No. Candor is my middle name. But thank you for your opinion.

> My Pentium has a video accelator, a network card, a SCSI card,
> a modem, and two slots occupied by I/O ports (one for my
> scanner, the other for a Zip drive). I don't have any more slots or IRQs,
for
> that matter.

Sounds like you have a personal problem. Decent (good) video and
network cards come with the PCI connector now. So do scuzzy
cards, for that matter. It's your choice not to use PCI, of course.

> Bet a lot of people are in the same boat.

Maybe. But a lot aren't, too.

>>> 6) Charging more than $500 for a PC extension card is a blatant
rip-off.

>> Sounds like a case of sour grapes. What about ICOM's and AOR's
>> 2-kilobuck price tag on their high end rigs that can't do what WiNRADiO
>> can do in some cases?

> You mention sour grapes--again? Guess when you don't have a strong
position,
> you gotta do a song and dance.

What should I do, then? The poor fellow wasn't being factual and
truthful. Furthermore, he didn't really have a grasp on what he was
talking about. It had to be "sour grapes". Or.....(never mind.)

> The fact that you compare your gizmo to
> Icom/AOR high-end radios is laughable.

So laugh, then. Enjoy yourself. I've enjoyed you.
Very much, I might add. It has been a pleasure to
discourse with you. You've made a bright spot in
my day, for which I am deeply gratified and pleased.
You may as well get something out of this, so laugh.

I am. <chortling>

By the way, I am eminently qualified to compare
technologies. MUCH...by several orders of magnitude...
more qualified than you, sir. Want to bank on that? <g>

> Oh, geez, after this display of public relations, customer-orientation
and
> lackluster defense of your own product, I guess I won't feel compelled to
buy
> one! Come back when you are ready to act like a real business.

I thought about that in advance. There was this choice to act
like a business or to act like a person. I chose the latter. That
way, truth and honesty can prevail. Businesses tend to deceive
and pull the wool over people's eyes. I hate that. So I am a
person, instead. That way, I can suggest quite legitimately for
you to pack sand where the sun never shines, you see. And I
can be decent with those who are decent with me. Very
straightforward and above the table that way.

It wasn't a tough choice......betwixt money and honesty. The
latter comes first and the former takes care of itself.

Truth is, I don't need to defend the product; and I don't
need to play silly games and come in under the table like
the shills do. Here I am, live and direct. What you see is what
you get. Like it or lump it. Or be indifferent.

I just checked my birth certificate, Michael Alexander, and I see nowhere on it that it says I am to subjugate myself to your expectations. This is a very curious thing, indeed, that you apparently think I should. Talk about a laughing matter!

<erupting into a horselaugh>

It is most assuredly the brightest spot in my day and the brightest one in a month of Sundays. Indeed, I have to thank you from the depth of my being. I owe ya one. So how can I repay you? Would it be okay for us to do a little exploratory surgery on the genetics of the crustacean family from which you sprang? Or should we delve into the structures of which made you so magnificent and pompous? How about a pelvic examination of your judgeship and qualifications to render summary judgments?

Would anything like that tend to "make your day"?

Be glad to oblige you, sir.

<wink-wink><nudge-nudge>

1916. Why not produce a scanner kit???

Newsgroup: rec.radio.scanner
Date: 1997-10-21 00:00:00 UTC
From: Michael Harpe <mike@ple-technology.com>
Message-ID: <344D6F47.7420@ple-technology.com>
Source record: 182530

This is so obvious that I am sure there is some bizarre, obscure and probably unenforceable law against it, but here goes anyway....

What some of the EEs on here need to do is design an easy to reproduce scanner kit. Sell PC boards and programmed microprocessors. A receiver built by an individual for personal use requires no type acceptance. Hams have been building their own gear for over 50 years. A scanner is within the capabilities of a sophisticated homebrewer. PC board manufacturing has become cheap and good PC board CAD software is readily available. Plus, there is more than enough electronics expertise here on the 'net to tackle this challenge.

Why hasn't anyone done this? Kits do not have to be type accepted. Heck, most Ramsey kits would not pass type acceptance even if they were built and aligned perfectly. I am missing something right? I'm not talking about technical barriers, I want legal reasons why we should not do this? I am NOT talking about building units for sale. I am talking about building a prototype and selling plans that others could use to build their own.

I suspect that the FCC might be trying to keep the technology to do this quiet, hence the ban on service manuals. It's not that difficult with the parts that are available today. Synthesizer chips are easy to get as are microprocessors that are more than up to this job. No, it will not be an ICOM R-8500 in looks or performance. That's not the point here. The point is to OWN A SCANNER WHETHER THE GOVERNMENT LIKES IT OR NOT. Slick packaging and perfect performance is not the goal. Resistance is the goal. If we as a group feel strongly enough about this issue, this is the kind of resistance that needs to be offered.

Remember, it's an American tradition to resist laws that people find oppressive. Let's put our heads together and fight!

Michael Harpe, N4PLE

Are you high or something Emilio? How is buying extra scanners going to change their internal policy on the service manuals? Even not buying R.S. scanners is not going to change their mind. Wake up and smell the roses: Radio Shack doesn't want us to stop scanning - they could care less. Scanners make up 5% OR LESS of their bottom line, so if we stop buying, continue buying or jump off a cliff in unison like a bunch of lemmings THEY WON'T CARE!!!

It's been my experience that money talks, and B.S. walks. Our complaints to Radio Shack are falling on deaf ears. Look at it this way. If you sell a product that sells only a handful of units each year compared to the other 10 zillion products you sell, and then your customers who bought the less popular product complain that you no longer sell an even less requested accessory to that item, you're not going to care! Not if your a corporate entity like Tandy! And if they don't care then why should I? Let them discontinue their scanner line! No loss to me!

I now buy only Uniden and AOR scanners, *not* because of service manuals, or the lack thereof, but because they make better radios at a better price. Period. The best scanners that RS sells are the scraps from Unidens factory floor. What does that tell you? It tells me that if you are new to scanning, you'll like the RS radio. If you're not, you'll want something more advanced, and more reliable.

Now, all you die-hard RS fans don't get all bent out of shape, I'm speaking from my own 10 years (geez, has it been that long??) in the hobby as of Oct 22nd, when I got my first scanner for my 16th birthday. I started on RS radios, but now I am happier with my two unidens than all of the RS scanners I have ever owned.

1918. WARNING IE 4.0 uninstall trashes computer!

Newsgroup: rec.radio.scanner
Date: 1997-10-21 00:00:00 UTC
From: wb6izg@qsl.net
Message-ID: <344f58ee.5031924@news.adnc.com>
Source record: 182532
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,rec.radio.shortwave

I just thought I would pass along the following to those of you
Hams who might be considering installing Internet Explorer 4.0 from Microsoft. I installed it about a week ago and after numerous crashes and problems I have decided to buy Netscape. So I uninstalled it. After I rebooted my computer I tried to connect to the internet but my Dial-Up Networking connection to my internet provider did not work anymore. I then tried to connect via Agent (an email reader), but it crashed. After many hours I went to control panel and network and then TCP-IP and reinstalled this. This finally solved my problems. I called my internet provider and they said that many people have had to completely
reinstall windows 95. Soo, be forewarned. If you plan on installing IE 4.0 plan on a long night if you decide to uninstall it.

Try routing that through a 10MF Cap Neg end to the discriminator tap.
Worked for me, I converteded the audio out to a discriminator out.

Chris Smolinski <cps@access.digex.net> wrote in article
<cps-ya02408000R1910971600070001@news.digex.net>...

> So the radio gets put inside the PC, one of the worst RFI
> enviroments known?

Are you aware that this is an old wive's tale? Inside a PC is
a whole lot cleaner than around a monitor. And if the body
of the radio is adequately shielded and if the power supply
and data lines are properly bypassed, and if the antenna is
installed where it belongs (outdoors, high as possible) then
the PC will not contribute to the RF interference normally
detected by the receiver.

This old wive's tale goes way back to the days when
computers weren't designed with RFI/EMI in mind. The
story is a lot different in this day and age.

> With a serial interface, one has the option
> of getting the radio away from the PC.

Not really. The serial cable becomes a part of the PC, and
it it happens to be resonant, then look out, dude! Even if
it isn't resonant, the wires and shield in the cable can
conduct RFI to the interface and the radio. No more so
and no less so than WiNRADiO inside the PC.

> I'm curious, why should 115k be considered slow?

Slower than molasses in a winter blizzard....compared to
8 MHz of the ISA bus.

> How much information has to get passed back and forth?
> Just tuning commands I would think.

If that's all you do is tune back and forth, then yeah. But
you can use a regular radio for that. If you take your radioing
seriously and want to do a lot more of what CAN be done,
then it takes a radio designed for that purpose. Serial
connections are fine and dandy at the DCE speed, but
somehow, I doubt many RS-232 radio interfaces go that
fast. More likely it's 9600-bps so as to allow for IRQ time
without losing data. Well, 9600-bps is slow. Very slow.
Especially when you are sending and receiving data.

> Plus, with a serial interface, the possibility exists to connect
> the radio to machines other than peecees. Or laptops w/out
> an ISA bus.

True about the mobile or portability aspect. But not true about
other computers particularly. At best, MAYBE...depending if
someone chooses to write software for it. As I understand it,
the ICOM PCR-1000 run only on PC's under Windows..... and
at 20-ch/sec, too. If the API is open architecture, then someone
else can try to port it to a Mac, say. But don't hold your breath.

> (BTW, in a year or two, Micro$oft will supposedly
> refuse to allow machines with ISA slots to use the Windows logos.
> They are trying to kill of ISA as quickly as possible, as it has
> become such a configuration/compatability headache

Not true. There is so much legacy hardware around that it
will be well into the 21st century before ISA disappears, and
even when it does, there will be plenty of cheap ISA machines
still around, and by that time, WiNRADiO will be PCI, or USB
or otherwise up with the times.

> for them.) [note, I am not saying that ISA has to be a headache,
> only that Micro$oft apparently feels the way they've implemented it is]

Well....I have ties to Microsoft and there is no word of anything
like that other than just talk of the distant future. Intel will
have to get in on the bandwagon as will Cyrix, AMD and a
host of others.

I agree, ISA is on the way out. But not soon.

>Gene Kozin <gene@itron-ca.com> wrote in article
><62gaukkel1@gate.itron-ca.com>...

>> Considering that most modern Pentium-based PCs
>> have only 3 ISA slots available, out of which one is usually
taken by a
>> modem and another is taken by a sound card, this can be a
problem.
>
>Now you begin to stray from pure candor. Most Pentium PCs have
>four ISA slots, and many of those use external modems and......so
>what's your point about picking on the fractional minority
situations?
>Men's rooms don't ordinarily offer "sanitary napkins", either. So
what?

When was last time you opened a generic Pentium clone that most of
PC-user have? There are 7 extension slots. Older motherboards have 3
PCI + 3 ISA + 1 shared by PCI and ISA connectors, so you can
theoretically have 4 ISA devices, but then you're limited to 3 PCI
slots. Newer boards, however, favor PCI bus, so what you have is 4
PCI + 2 ISA + 1 shared. In case one has a full stack of PCI cards,
there are only 2 ISA slots available.

As to external modems, YOU are talking about minority situation
here, admit it.

>> 4) Even within Windows/ISA realm, Winradio can not be certified
>> as Windows'98 compatible, since it does not support
'plug-and-play'
>> standard.
>

> Install one and see if it isn't Plug 'N Play! Now you've departed
from
> the realm of candor, into a guessing game.

Really? I'm sorry. I suppose "Plug 'N Play" means something else in
Australian. To bad I don't have a dictionary handy. Here, in North

America, though "Plug 'N Play" is a specification, which your device either complies with or not. And yours does NOT. So, who's being untruthful?

Nevertheless, I have to correct myself here. It's 'PC 97 System Design Guide' (see http://www.microsoft.com/hwdev/), not Windows'98, which requires that all ISA devices be P'n'P-compatible. As to 'PC 98 System Design Guide' (http://www.microsoft.com/hwdev/download/desguid/pc98v1.zip), ISA devices are not allowed AT ALL! Here's a quote from "Basic PC 98" chapter, item #28: "System does not include ISA expansion devices".

Now, don't get offended. You seem to take this argument all too personally. I'm not saying that Winradio will not work with Windows'95 or Windows'98. It just cannot be certified by WHQL as 'Windows Compatible' (send all your flames to Microcoft, not to me). I'm sure you don't care, but others might.

>> 5) Consider also, that ISA bus is being gradually phased out by PC
>> manufacturers, so buying Winradio may prevent you from upgrading
>> to newer PC hardware in a couple of years, unless you're willing
>> to scrap your $500 investment.
>
>How silly and untruthful. There are NO PLANS to scrap ISA for a
>very long time.....there is just too much legacy hardware around that
>will use it long into the next century.

To stick ones head into sand like an ostrich, that's silly. Perhaps you should follow industry trends more closely, Since 'PC 98 System Design Guide' virtually outlawed ISA devices, the industry will be only happy to get rid of ISA bus as soon as it possibly can (at least in home PC market).

What your prospective customers would be more happy to here from you is not a stupid attempts to deny facts, but rather assurance that your engineers are steaming away designing PCI (or IEEE 1394 or DeviceBay or whatever) version of Winradio and those who buy it now will be eligible to *substantial* discount, say 50%, when it's available. But, I suppose I have better chance to see pigs fly :-(

Meanwhile, like it or not, I strongly advice everybody against investing in any ISA device (not just your product) for the very same reason - it has no future.

>> Still, I believe that Winradio is hugely overpriced, considering its
>> limited use. Here is why:
>
>Is it possibly because you can't afford one and got yourself a case
>of sour grapes? Aesop told a story about that syndrome a few

>thousand years ago. Apparently it remains a common malady.

Oh, c'mon. I can relate to your anger and frustration. Nobody likes being critisized, but I've not personally attacked you, so your attempt to insult me is not justified. Don't bother to apologize though, I make enough not to be insulted by such a silly remark.

You sound like very dedicated person, but perhaps you should learn to take a bit of critique without being personally offended. There are no perfect products and what others have to say about yours is, in the end, for the benefit of the product itself, however sour it may sound.

Cheers...

I am sorry that I cannot help with the display problems except to
check any connections you may have disturbed inside. My PRO-43 was
fine until I opened it to tighten the BNC connector, problems followed
which turned out to be dry joints which must have been hanging on by a
thread before. Also check there is no pressure on the display face.

I have been out of touch with the scanning scene for a while, can you
point me toward the ' beep delete ' mod ?

Cheers...

Martin

Yes, you aren't having an unusual problem, the new "Dial Up Connection"
wipes out your old setting and thus you cannot easily recover from the
installation of the new IE4.0 BVrowser. Same goes for the "update" Dial
Up connection from MS...it will effectively wipe out your old dial up
and you'll get to install everything again! No fun! Be careful!

The bespectacled, bucktoothed, malevolent Michael Alexander
(malexder@aol.com) besmirched to society thusly:

>> Firstly, let's remind these bozos that commercial ads are not welcome in
>> these NG's.

> Sorry to offend - it was not intended, but the pricing was
> purposefully omitted to keep the post informative and in the
> nature of an announcement.

> That's a load of crap.

Oh goodness! Really now? You are an expert in "crap"?

> You posted an ad.

No, I didn't. I posted an announcement. Some people liked it;
some didn't. It would be the same if I posted a notice for
free widgets. Some would like it; some wouldn't. Tough.

> Omitting the price was a lame attempt to get around the widely
> held view that commercial outfits ought to keep their ads out of the
> newsgroup.

No. It was an effort to compromise. Very overt; not subtle.
Plain and clear. Simple. Succinct. To the point. You just
didn't like it and took it upon yourself to be judge, jury, and
executioner. Guess what I think of judges, juries, and
sanctimonious executioners? We'll not get into that right
now.....but we can later, if you like.

> Optoelectronics, Icom, AOR etc. etc. don't spam us,

Who is "us"? And what do you think their shills do here?
They work under the table and you say nothing about it.
So are you permissive - or oblivious? Or just nescient?

> what makes you so special?

You. You just did. <grinning>

>> So anyway it is a bummer that you are offended (and offensive)
>> but you are free to stew or accept it as you please. Obviously,
>> all the people cannot be pleased all the time. Sorry.

> You have a stunning grasp of public relations.

Should I have NOT apologized? Or not have been truthful? You
are offended, too, I see. What can I say other than "Sorry", and
to acknowledge the truth that some people like one thing and
some like another. You chose to be offended. Bummer. What
to you want - a cookie or a kick in the arse?

Either way is too bad for you, I guess. How else can it be truthfully
put? Would it be better if I minced my words; gilded them with lilies
and tulips; and sucked up to you with begs for your benevolent pardon?

"Ooooooooooohhhhhhhhhh puhleeeeeeeeze, Mister Alexander,
puhleeeeeeeeze don't punish me, puhleeeeeeeeze, sir?"

Yeah, rrrrri--ght. <grinning even more>

>> Is it possibly because you can't afford one and got yourself a case
>> of sour grapes? Aesop told a story about that syndrome a few
>> thousand years ago. Apparently it remains a common malady.

> I can afford one (actually, I can afford many) but I would not buy that
> overpriced piece of garbage for half the price. A computer controlled
scanner
> (I have two) is a far superior alternative, for only a few dollars more.

Really now? My goodness, you certainly do have your opinions.
And you certainly are entitled to them and even to voice them.
And, of course, you did. And I humbly thank you from the bottom
of my heart for your valued and most carefully considered reply.
You certainly are a gentleman and a scholar and seem not to
mince words yourself. Apparently you don't like it when others
are as direct and to the point, though. But that is a personal
problem. Sorry - I can't help you with that - not without a hefty
counseling fee, anyway. <tittering>

>> Now you begin to stray from pure candor. Most Pentium PCs have
>> four ISA slots, and many of those use external modems and......so
>> what's your point about picking on the fractional minority situations?
>> Men's rooms don't ordinarily offer "sanitary napkins", either. So what?

> Pphff--you stray from candor too.

No. Candor is my middle name. But thank you for your opinion.

> My Pentium has a video accelator, a network card, a SCSI card,
> a modem, and two slots occupied by I/O ports (one for my
> scanner, the other for a Zip drive). I don't have any more slots or IRQs,
for
> that matter.

Sounds like you have a personal problem. Decent (good) video and
network cards come with the PCI connector now. So do scuzzy
cards, for that matter. It's your choice not to use PCI, of course.

> Bet a lot of people are in the same boat.

Maybe. But a lot aren't, too.

>>> 6) Charging more than $500 for a PC extension card is a blatant
rip-off.

>> Sounds like a case of sour grapes. What about ICOM's and AOR's
>> 2-kilobuck price tag on their high end rigs that can't do what WiNRADiO
>> can do in some cases?

> You mention sour grapes--again? Guess when you don't have a strong
position,
> you gotta do a song and dance.

What should I do, then? The poor fellow wasn't being factual and
truthful. Furthermore, he didn't really have a grasp on what he was
talking about. It had to be "sour grapes". Or.....(never mind.)

> The fact that you compare your gizmo to
> Icom/AOR high-end radios is laughable.

So laugh, then. Enjoy yourself. I've enjoyed you.
Very much, I might add. It has been a pleasure to
discourse with you. You've made a bright spot in
my day, for which I am deeply gratified and pleased.
You may as well get something out of this, so laugh.

I am. <chortling>

By the way, I am eminently qualified to compare
technologies. MUCH...by several orders of magnitude...
more qualified than you, sir. Want to bank on that? <g>

> Oh, geez, after this display of public relations, customer-orientation
and
> lackluster defense of your own product, I guess I won't feel compelled to
buy
> one! Come back when you are ready to act like a real business.

I thought about that in advance. There was this choice to act
like a business or to act like a person. I chose the latter. That
way, truth and honesty can prevail. Businesses tend to deceive
and pull the wool over people's eyes. I hate that. So I am a
person, instead. That way, I can suggest quite legitimately for
you to pack sand where the sun never shines, you see. And I
can be decent with those who are decent with me. Very
straightforward and above the table that way.

It wasn't a tough choice......betwixt money and honesty. The
latter comes first and the former takes care of itself.

Truth is, I don't need to defend the product; and I don't
need to play silly games and come in under the table like
the shills do. Here I am, live and direct. What you see is what
you get. Like it or lump it. Or be indifferent.

I just checked my birth certificate, Michael Alexander, and I see nowhere on it that it says I am to subjugate myself to your expectations. This is a very curious thing, indeed, that you apparently think I should. Talk about a laughing matter!

<erupting into a horselaugh>

It is most assuredly the brightest spot in my day and the brightest one in a month of Sundays. Indeed, I have to thank you from the depth of my being. I owe ya one. So how can I repay you? Would it be okay for us to do a little exploratory surgery on the genetics of the crustacean family from which you sprang? Or should we delve into the structures of which made you so magnificent and pompous? How about a pelvic examination of your judgeship and qualifications to render summary judgments?

Would anything like that tend to "make your day"?

Be glad to oblige you, sir.

<wink-wink><nudge-nudge>

1934. Buying a scanner for UK & ROI

Newsgroup: rec.radio.scanner
Date: 1997-10-21 00:00:00 UTC
From: Alistair Cunningham <ac212@cam.ac.uk>
Message-ID: <Pine.LNX.3.96.971021140351.155A-100000@ursa.sel.cam.ac.uk>
Source record: 182564
Cross-posted to: alt.radio.scanner.uk,rec.radio.scanner,uk.radio.amateur

I think of buying a scanner for the first time. However, my situation is a little unusual, so I have a few questions:

1. I live in Northern Ireland, a few miles from the border with the Republic of Ireland, and would like to take the scanner with me sometimes when crossing the border. I also spend half of the year studying in England. What does the law have to say about scanning in both A. The UK, and B. ROI? If the worst come to the worst, I can keep it in the UK.

2. I'm thinking of buying either a Pro-64 (199 pounds) or a Pro-2042 (249 pounds) from Tandy. Is tandy the cheapest/best place to go?

3. Can you get a rechargable pack for the 64? I don't fancy going through batteries like mad...

4. Does the 2042 come with all the arials needed? Are they outdoors?

5. Can an outdoors arial be added to the 64? Presumably it wouldn't be as good as an outdoors arial on a 2042.

6. How much would I lose out considering the 64's narrower frequency coverage? To my mind (at the moment) the big reason to go for a 2042 is it's frequency coverage. (And maybe the extra FM mode.)

7. Does the 64 come with a stand or anything for mounting it on a desk?

8. At college they'd be on the same desk as my PC. Would this affect performance?

9. How much better is the 2042 than the 64 generally, eg. Sound quality? If only a little, I'll get the 64, as portability is quite important to me.

Thanks in advance for your help...

Alistair Cunningham.

) > use. Here is why:
)

) Is it possibly because you can't afford one and got yourself a case
) of sour grapes? Aesop told a story about that syndrome a few
) thousand years ago. Apparently it remains a common malady.
)
) > 1) It works only with PC. It means that every time you want to listen to
) > something, you have to power up your PC.
)
) That is true. So much true that many people will opt for a stand-alone
) radio; others will opt for both; and a few will choose WiNRADiO, no matter
) what. The situation is not all that black and white, especially because
) there
) are things you can do with WiNRADiO that you can't do with any other radio,
) and certainly not for the price.
)
) > 2) It does not work with just *any* PC. It has to be Windows PC, so for
) > example, Linux and OS/2 users are out of luck.
)
) That again is true. So much true that Linux, Mac, and OS/2 uses might well
) feel left out. There isn't anything that can be done about that for the
) time being because
) those users are in the extreme minority and even as a class, cannot form a
) market that will propel WiNRADiO to continued development. Maybe some day
) those users can be supported, but for now it is out of the reasonable
) question.
)
) > 3) Even having Windows PC does not guarantee you can use Winradio. You
) must
) > have an ISA slot available.
)
) So very true. You must definitely have an open ISA slot. This is
) ordinarily
) not a problem. It is for the prospective user to determine for himself,
) and the WiNRADiO specifications make it abundantly clear what are
) the prerequisites. No secrets.
)
) > Considering that most modern Pentium-based PCs
) > have only 3 ISA slots available, out of which one is usually taken by a
) > modem and another is taken by a sound card, this can be a problem.
)
) Now you begin to stray from pure candor. Most Pentium PCs have
) four ISA slots, and many of those use external modems and......so
) what's your point about picking on the fractional minority situations?
) Men's rooms don't ordinarily offer "sanitary napkins", either. So what?
)
) > 4) Even within Windows/ISA realm, Winradio can not be certified as
) > Windows'98 compatible, since it does not support 'plug-and-play'
) standard.
)
) Install one and see if it isn't Plug 'N Play! Now you've departed from the
) realm of candor, into a guessing game.

)
) > 5) Consider also, that ISA bus is being gradually phased out by PC
) > manufacturers, so buying Winradio may prevent you from upgrading to newer
) PC
) > hardware in a couple of years, unless you're willing to scrap your $500
) > investment.
)
) How silly and untruthful. There are NO PLANS to scrap ISA for a
) very long time.....there is just too much legacy hardware around that
) will use it long into the next century.
)
) > 6) Charging more than $500 for a PC extension card is a blatant rip-off.
) Its
) > manufacturing cost is no doubt less than that of a comparable desktop
) > scanner. Unfortunately, Winradio Communications are not eager to pass
) these
) > savings to their customers.
)
) Sounds like a case of sour grapes. What about ICOM's and AOR's
) 2-kilobuck price tag on their high end rigs that can't do what WiNRADiO
) can do in some cases?
)
) Perhaps you should go to work for WiNRADiO and give them the benefit
) of your vast wisdom and experience in the radio business. They could
) lower prices and you could work for peanuts, a song, and a dance.... no?
)
) > Verdict:
)
) > Winradio is an overpriced toy supposedly targeted for computer buffs (not
) > professionals) who are unaware of possibility to loose their investment
) > within a couple of years.
)
) You are, of course, welcome to your opinion.
)
) > For those who don't mind paying premium price for mouse-controlled radio
) and
) > having to have your computer on every time you scan, Icom's PCR-1000
) looks
) > like a better choice. It's an external box with serial interface (RS-232)
) > and slightly higher sensitivity (priced a bit higher too, though). See
) > http://www.icomamerica.com/featured/ for details.
)
) Are you aware of the liabilities of serial port connections? Like SLOW for
) one,
) and higher overhead on the CPU? WiNRADiO connects to the ISA bus to
) operate at a minimum of 8 MHz.....as opposed to 115 KBPS. Big difference
) there, especially for people who appreciate the multitasking and
) multithreading
) capabilities of their computers.
)

) > ..... Believe me, it's easier to turn a VFO knob with your finger
) > then with your mouse.
)
) But you are not believable. WiNRADiO's VFO is definitely tuned by the
) mouse,
) all right, but there is no motion involved. Click and hold on the upper
) half of
) the VFO "knob" to tune down and click and hold on the lower half to tune
) upwards. What is so difficult about that, pray tell? Requires no energy
) at all.
)
) So you must be guessing, no?
)
) WiNRADiO Sales USA

Hi!!

I am looking for an ICOM R-10?? How is this scanner rated?? What do I have to do to get cellular restored? What is the price range I would be looking for if i wish to buy a used model. I had a PRO-2037 and I think it is a useless box really.

A reply to my mail account would be greatly appreciated.

Please save me from getting ripped off!!

Regards,

You know it's funny, Patrick calls tech pluses idiots, we can't win. Some of us try to upgrade and when we do we STILL get our horns busted. At least we learned the code and got to 5 wpm for Christ's(tm) sake. I'm up to 10wpm and trying to get my general. Just what the hell do we have to do?

Unfortunatelly, the Pro-60's triple conversion seems to discourage this
kind of reception. I can never seem to get any on mine.

It's pretty easy to make broad sweeping statements about Morse Code being obsolete and useless but is it true? Even if it is technically, is the declaration true for everyone?

For example, I consider anything below a Pentium 133 to be junk, but most people are quite happy to receive my junk when I give it to them. Same thing with radio in most parts of the world.

I do think we should make a codeless SW license as part of the incentive licensing plan though, and end the fighting. It could be a subset of the General portion of the band. I think the statistics would prove the following pretty quickly -

Problem with growth is not Morse but room for antennas and the restrictive covenents, building codes, and lack of native born kids these days (just ask anyone who owns a business) in general.

I've helped over 20 people get licensed in the last year and not a single one has been active on HF. About 30% have upgraded and learned Morse for fun, having no ability to get on the air. All are active on VHF/UHF.

If we put as much energy into removing the antenna restrictions as we put into this Morse argument we might actually do something positive for the hobby.

It can be done, using high-voltage capacitors rated for lightning overvoltages. It's quite common to send various signals over high-tension lines. Power companies do this. The equipment is bulky, though.

Ummm, you need to relax a little.
Not selling manuals will not stop people from using scanners.
I suspect scanners make up only a small portion of RS' sales.

: Good idea. NOT! How would you propose to couple into primary
: distribution lines which carry at minimum 4400 Volts, 3-phase?
: Nice "brainstorming" with little knowledge, Matt.

Dead easy, take several 10KV 1nf capacitors, hook these along
a nylon fishing line, with wire in between, cover with heatshrink,
now take a couple of weights, with a sharp u shaped edge between
them, attatch to the end, and drop over the line with a fishing rod,
a non-conductive rod is best, unless you use a non-favoured relative
for this step.
Now simply connect this to your transmitter.

I'm 100% sure this will be safe. However, the chance of anyone
persuading me to try this is about the same as the chances
of greenpeace sponsoring an orion mission to mars, taking off
from next to the statue of liberty.

(Orion is a cute design of spaceship, take a battleship sized
hull, weld on one mother of a thick hemisphic plate to the bottom,
then drop A or H bombs out the back. You only need several
hundred to get to orbit.)

LYD,

The point is TP-2 only. IC2 pin9 is the same as TP2!

Mount a 1/8" jack to the the rear of the radio - metal part (chasis gnd). Connect a wire between the TP-2 terminal and the center pin of the jack you just mounted. You may want to place a 10K Ohm resistor in series with the wire for added protection. Then use a patch cord between the newly mounted jack and the line in jack on your card. That should be it!

Does anyone have a good idea to make a good antenna for my scanner. I live in a apartment and putting a good base antenna on the roof is not allowed. I do have a small bellcony but it screened in so I can't clamp anything to the rails. I have rapped a length of wire around the telescopic antenna that came with the scanner and it really helped on the reception of the UHF frequencies but what I need help receiving is the VHF frequencies.
Oh, and before someone says that i should lengthen the amount of wire I have rapped to the antenna now, I've tried it and nothing changed.
Any help on this matter will be greatly appreciated and most likely tried if possible.
Thanks

Cross-posted to: alt.radio.scanner,rec.radio.amateur,rec.radio.cb,rec.radio.scanner,rec.radio.shortwave

I apologize for my previous posting here on rec.radio.shortwave, etc. It was immature.

I sent mail to the WinRADiO company this morning that I was offended at an earlier reply from WinRADiO at san.rr.com.

The company sent back an apology. I replied to accept and said that I was guilty of getting a little heated too.

They stood by their employee and said that he had professional integrity and several years of experience, but just was a guy who did not play around with words. I'm sure he wouldn't have used strong words if he didn't believe in the product. It appears as though he voluntarily responded to debate the critical posts on his own time. (Most companies do not even read newsgroups to defend and support their products.)

I felt that the company was nice to deal with and that they supported their experienced employee. I think that they have a lot of integrity and are well intentioned.

I've also been to the www.winradio.com web site several times now and they do have pretty good information there.

Sorry for being a jerk,
-Kevin

1964. "Illegal repair manuals"

Newsgroup: rec.radio.scanner
Date: 1997-10-21 00:00:00 UTC
From: andy <andyb@qni.com>
Message-ID: <344D111A.B4B@qni.com>
Source record: 182594

Right out of the chute I want to say that the following is simply a "Reader's Digest" version of the conversations I had with various entities.
I am not saying that I necessarily agree or disagree with any of them. FWIW, all of the persons I spoke with were very polite and helpful. No one was antagonistic.

Having heard about all the hoop-lah about "illegal" service manuals from Radio Shack, I went to the local RS store (where the manager knows me) and asked to purchase the manual for a PRO-2006. He said that the FCC had made it illegal to sell repair manuals for any scanner that receives 800 MHz or above. I told him I worked for a police department (which I do) and it was for our shop, not for personal use. He still said they were "illegal." I didn't argue with him because he is a good guy.

I went home and called the RS repair shop in our city, and spoke with the
tech that works on scanners. He said the same thing—that they were "illegal."
He claimed that even if THEY lose one, a new one must be hand carried to them by someone from Ft. Worth. Again, I didn't argue because he is just
relaying what he knows—he doesn't make policy.

Next call was to the FCC in Gettysburg. Spoke with a gentleman there who said in a nutshell, that it is perfectly legal to sell repair manuals.
The FCC guy did offer to send an e-mail with all the rules and regulations
concerning modifying/monitoring scanners for cell phones reception, etc.
I agreed and he did. Nothing new in what he sent to me.

Then I called the RS district manager's office. He was out, so I asked for
the phone number to merchandising in FT. Worth. Called that number and asked for the buyer in charge of communications equipment. A man named Wayne Wilson answered. He was indeed the buyer for scanners and related equipment for Radio Shack. I explained my reason for calling and about the previous calls I made in regards to the situation.
Mr. Wilson gave a sort of muffled laugh mixed with a slight groan when he found out what I wanted. He explained that he has fielded a number
of calls about this—most of them beating up Radio Shack for being an evil,

cold-hearted company that had no regards for its customers.
He did admit that the FCC had requested (not demanded) that they not sell repair manuals for scanners that receive 800 or above. The company, along with Uniden, agreed to keep the manuals away from the consumer. The reason they agreed is coming up soon, but he wanted to be sure I understood the next point. Mr. Wilson told me that Uniden, who agreed with the FCC, has never sold their repair manuals in the past. Radio Shack has always sold theirs before, and still does for anything other than the mentioned scanners. Uniden still doesn't. Why RS has become the sole target for such abuse is of concern to him, since Uniden has always had that policy and people don't seem to mind that fact.
Wayne explained that he is a ham, and enjoys listening to scanners, too. He was physically in Washington DC as a Tandy representative fighting the various "scanner banning" bills. Tandy is on our side, but they are a for-profit organization, and they must watch out for their interests, too.
Due to that fact, they caved in to pressure from the FCC and stopped making the manuals available. Here is why:

In a nutshell, the FCC (the government) can make things rough for people.
If you don't do what they say—you pay the price. We came up with a simple analogy to explain the phenomenon—if you are walking down the street, minding your own business, and a cop stops you and asks for your ID, you don't have to comply.
But you will have to suffer the consequences of your actions—right or wrong as they may be. The officer has many ways of "putting pressure" on you.
(I am not condoning those methods, legal or illegal—just a statement of fact.)
Same with the federal government.
Wayne said that he (Tandy) wants to continue to sell scanners. He doesn't want them to disappear from the market place, for personal and business reasons. If further regulations were put in place that restricted what a scanner could receive, eventually sales would drop to a point where it was no longer profitable to manufacture/sell them and they would cease to exist. If that

happened, he said, the only way to monitor would be to purchase a multi-thousand
dollar commercial radio and have someone program it with the transmit disabled—if
you could get someone to do that for you. Anyway, Tandy agreed to the restricted
sales to satiate the FCC and to perhaps keep them off our backs for a while.
It appears that Radio Shack was between the proverbial rock and a hard spot, and elected this option.

The following are my thoughts, not that of Tandy or Mr. Wilson:

We have here a classic example of a non-legislative body making laws. The FCC has no control over the sale of these manuals, but the pressure they
can bear on people makes it nearly impossible not to do what they want. So in
reality, they DO have control over the sale of the manuals. This kind of thing
is happening with startling regularity in other parts of our live, too. We have
courts that delcare that election out-comes on various social matters are wrong,
and throw out the will of the people and force the will of the court upon the
voters. They don't make laws in the sense that a legislature does, but they
still get their way.
I guess that in a round-about way, the FCC has made the manuals essentially "illegal."

Andy

A bad analogy.

Tandy decided that being in bed with big government is more important
than making a few dollars from their manuals.
Tandy doesn't care about free speech or their small scanner anthusiest
related business , they're out to make a dollar .
It's more profitable being in bed with big government than having any
freedom.

BTW, They have enough money to buy freedom if they wanted.

Merchants have no country. The mere spot on which they stand does not
constitute so strong an attachment as that from which they draw their
gains. ------ Thomas Jefferson

1966. Trade PRO-2006&OPTO BOARD 4

Newsgroup: rec.radio.scanner

Hello,

I am looking to trade my PRO-2006 (In GREAT condition) with OPTO board installed software included and cables.

Included software to control the unit - Scancat,ScanStar, and Radio Manager.

I would like to trade all this for another PRO-2006 + $140.00. This is a great
deal because the OPTO board alone sells for $300 and this isn't with software.
So, all your paying is $140.00 for the board and software!

Interested please let me know... Thanks Jeffrey - N9MXT

: TP4 (Test Point 4). TP4 is a lot more convenient than the chip itself
: but I don't seem to get a signal off of it. Is pin 9 really connected
: to TP4 or is it actually TP2 perhaps which is a lot closer physically?
: Anyone with a service manual that could check?
:
Hi Bill,
I don't have a diagram on the 2004, but the 10420 sounds like the generic
MC3359 or MC3357 chip by motorola. Or one close to it. You need to buffer
and isolate the demodulated output from the chip. This would include a dc
decoupling cap.
A generic op amp would work real well, I use an LM-358 for a buffer and
an amplifier.
Good Luck

> between radio and computer that would make the serial port too poky
> to be useful?

Issues there are not black and white. The amount of data on a serial
port is not what loads the CPU. The serial port runs at a constant
speed (DCE) about 115-kBps, regardless of the amount of data, . It's
the Interrupt Requests (IRQ) that play the leading role there. When
the computer has to do other things besides convey data to and
from the outside world, then all processes have to be periodically
interrupted to let something else happen. The more processes,
the more the CPU is loaded. Now if a serial port is running data,
it will generate more interrupt requests, but the computer can and
sometimes does overrule and therefore you get lost data...which
has to be resent. This is the slowdown - not the speed itself.

For whatever reason, the Icom PCR-1000 runs at 20 steps per second,
right? WiNRADiO runs at 50 steps per second. Furthermore, WiNRADiO
does not load the CPU nearly like the serial port operation.

> Perhaps if the CPU were involved in signal processing I could see
> a real need for speed.

It isn't that need for speed so much as it is to keep from loading
the CPU that will cause lost data and therefore, reduced speed.

> For either radio, does the computer do anything more significant than
> replace the knobs and switches of a traditional radio?

Well......in the hands of a novice, perhaps not. But give him
time and some essential computing savvy, and knobs, switches,
and dials will fall out of the picture. Computerized radio offers
so much more than knob-twisting. Call it data acquisition,
supervisory control, and data processing for starters....and it
only goes up from there.

> If not, I think a good case could be made for serial port interface
> over ISA bus. The potential of a serial port radio with a laptop seems
> great. And the possibility of hacking just about any computer, an
> old Atari, Apple II or Hypercard stack, to control a radio via serial
> port is too cool.

Granted that a serial port is about the only way to take a radio
mobile and retain computing power. In that avenue, the Icom
shines. It will go mobile, that's for sure.

> Maybe the ICOM actually demands more horsepower than I think. It's
> bundled software certainly does(486+, win95,nt). Anyone know for sure?

It would take some heavy duty bench testing to concoct the
numbers. Let's stay away from those, and stick to the up
front principles.....one of which is if you need mobile or
portable radio and computing power, then a laptop and
the Icom will shine. If you need radio and computing power
on the base, then WiNRADiO will clean the Icom's clock
in more ways than one.

Ferinstance, you could be running MS ACCESS database;
Excel spreadsheet; and a monstrous graphics program, and
WiNRADiO....all at the same time, and WiNRADiO will not
contribute to the CPU load.

>>>>Sorry Charlie - why should I tossup $200 to $300 over a
>>>>conventionalscanner just so I can use my mouse to tune it?
>>>> Talk about OVERPRICED!!

> OTOH, I can see this guy's point. The last thing I need is another
> reason to sit my sorry ass in front of a computer.

Well, that fellow is one of those neophytes who doesn't
understand that a radio is capable of more than knob-
twisting. So for him.....he's right. Why should he pay to
slide a mouse around? He shouldn't.

Neither should he pay $6000 for an Icom R-9000 either.
That kind of guy does best with a hundred dollar bottom
end shortwave receiver and a hundred dollar scanner.
And that's not a putdown. All radio hobbyists should get
in cheaply and easily so that they can easily extricate
themselves if radio doesn't offer what they want.

And even for those who have come in to stay and like what they see....computerized radio may not be for all of them, either. I can't say. It is an individual choice.

I can say that OLE automation and DDE dynamic data exchange powers of a modern computer, when interfaced to a DC-to-Daylight radio definitely offer some power a cut and a lick above the paradigm of knob twisting and dial watching. As a matter of fact, the very nature of radio is changing, and year by year, there is less to listen to.

But the RF spectrum is full of signals and the spectrum of 30 MHz to 1.3 GHz is NOT efficiently monitored with a plain old scanner. A computerized radio makes it a lot easier to cover and assimilate the activities in that spectrum.

A computerized radio opens doors to aspects of radio that the knob twister cannot fathom.

I'll conclude with the observation that if the grapes are too high to reach, they are not necessarily sour. it is just easier to assume they are.

Hello,
I am selling a practically new Mobile 100-channel scanner with 800MHz
and VHF-air Band

PRO-2046
Just touch buttons to explore preset
VHF Police,Weather,DOT,Highway,800 MHz Police/Fire frequencies.
Also provides band search in 12 preset frequency ranges and HyperSearch
direct search-up to 300 steps per minute.
20 programmable search skip frequencies help prevent lockups on
undesired signals.
Mounts under dash with included bracket.
Have original box and manual for the unit.

I am selling the unit for $120.00 + shipping

Interested please let me know... Thanks Jeffrey - N9MXT

Chris Smolinski <cps@access.digex.net> wrote in article
<cps-ya02408000R1910971600070001@news.digex.net>...

> So the radio gets put inside the PC, one of the worst RFI
> enviroments known?

Are you aware that this is an old wive's tale? Inside a PC is
a whole lot cleaner than around a monitor. And if the body
of the radio is adequately shielded and if the power supply
and data lines are properly bypassed, and if the antenna is
installed where it belongs (outdoors, high as possible) then
the PC will not contribute to the RF interference normally
detected by the receiver.

This old wive's tale goes way back to the days when
computers weren't designed with RFI/EMI in mind. The
story is a lot different in this day and age.

> With a serial interface, one has the option
> of getting the radio away from the PC.

Not really. The serial cable becomes a part of the PC, and
it it happens to be resonant, then look out, dude! Even if
it isn't resonant, the wires and shield in the cable can
conduct RFI to the interface and the radio. No more so
and no less so than WiNRADiO inside the PC.

> I'm curious, why should 115k be considered slow?

Slower than molasses in a winter blizzard....compared to
8 MHz of the ISA bus.

> How much information has to get passed back and forth?
> Just tuning commands I would think.

If that's all you do is tune back and forth, then yeah. But
you can use a regular radio for that. If you take your radioing
seriously and want to do a lot more of what CAN be done,
then it takes a radio designed for that purpose. Serial
connections are fine and dandy at the DCE speed, but
somehow, I doubt many RS-232 radio interfaces go that
fast. More likely it's 9600-bps so as to allow for IRQ time
without losing data. Well, 9600-bps is slow. Very slow.
Especially when you are sending and receiving data.

> Plus, with a serial interface, the possibility exists to connect
> the radio to machines other than peecees. Or laptops w/out
> an ISA bus.

True about the mobile or portability aspect. But not true about
other computers particularly. At best, MAYBE...depending if
someone chooses to write software for it. As I understand it,
the ICOM PCR-1000 run only on PC's under Windows..... and
at 20-ch/sec, too. If the API is open architecture, then someone
else can try to port it to a Mac, say. But don't hold your breath.

> (BTW, in a year or two, Micro$oft will supposedly
> refuse to allow machines with ISA slots to use the Windows logos.
> They are trying to kill of ISA as quickly as possible, as it has
> become such a configuration/compatability headache

Not true. There is so much legacy hardware around that it
will be well into the 21st century before ISA disappears, and
even when it does, there will be plenty of cheap ISA machines
still around, and by that time, WiNRADiO will be PCI, or USB
or otherwise up with the times.

> for them.) [note, I am not saying that ISA has to be a headache,
> only that Micro$oft apparently feels the way they've implemented it is]

Well....I have ties to Microsoft and there is no word of anything
like that other than just talk of the distant future. Intel will
have to get in on the bandwagon as will Cyrix, AMD and a
host of others.

I agree, ISA is on the way out. But not soon.

-> nature of an announcement. Other people are annoyed that the
-> price wasn't posted.

Some people are TOO easily offended.

My feeling about WINRadio is that unless it has something REALLY super about it, I'd pass. I occasionally have to move my radios, and my computer sometimes crashes, and I would NO be happy if a crash happened while something really hot was happening. If power goes out now, I can take 3 scanners to the car and plug them into an inverter, can't do THTA with the computer.

I see it as a product with a small market, probably to those that 'play' with scanners (and have $$ to spare) rather than use them seriously (like media people).

-> Now you begin to stray from pure candor. Most Pentium PCs have
-> four ISA slots,

Not true, over 70% of available Pentium-class MBs have only 3 ISA slots. A few have 5 ISA slots, but those are the most expensive boards available.

I ordered a BC3000XLT scanner from Communications Electronics Inc. in August. I received my scanner and found that the antenna was very loose and reception was lousy. The center conductor of the antenna has a pin which must not have been soldered up inside the antenna very well and is now lodged in the radio's BNC connector.

I called CCI and they said that Uniden would replace the antenna. I faxed in my scanners serial number and waited for over two weeks and no antenna. I called Uniden again and was informed that the yes they did have my order but the antennas are back ordered and will not be in until December 12. They did not have the courtesy to call or fax me to let me know! I asked them if they would send me a new scanner and they said no, the Bc3000XLTs are all on backorder - NONE in stock. Hmm I wonder if I call and pretend to order one if they would say that the BC3000XLT are out till > mid-December???

I asked to speak to someone in charge and left a message with someone. A person who was returning the managers calls told me to fax in a note enplaning my antenna problem and they would send me a new one when they arived in December. DUH! I already had done this two weeks ago. So I left another message with the manager telling her that I was very dissatisfied with the service from Uniden. Its been three days and I have not heard from them yet.

>the CPU less than devices purporting to do the same thing
>on a serial port.

Both WiNRADiO and the ICOM I find compelling. I'm curious, the ISA bus may indeed be faster, but how much data needs to be transferred between radio and computer that would make the serial port too poky to be useful? Perhaps if the CPU were involved in signal processing I could see a real need for speed. For either radio, does the computer do anything more significant than replace the knobs and switches of a traditional radio?

If not, I think a good case could be made for serial port interface over ISA bus. The potential of a serial port radio with a laptop seems great. And the possibility of hacking just about any computer, an old Atari, Apple II or Hypercard stack, to control a radio via serial port is too cool.

Maybe the ICOM actually demands more horsepower than I think. It's bundled software certainly does(486+, win95,nt). Anyone know for sure?

>>Sorry Charlie - why should I tossup $200 to $300 over a conventional
>>scanner just so I can use my mouse to tune it? Talk about OVERPRICED!!

OTOH, I can see this guy's point. The last thing I need is another reason to sit my sorry ass in front of a computer.

I don't understand the question. In a literal sense,
everything drifts. But the minimum resolution bandwidth of
6 kHz makes any "few hertz" drift kind of moot.

> Not a feature is it?

I don't know what you mean with that one. Perhaps you could
clarify the question.

> But is it really a spectrum analyzer as you claim?

I don't claim anything. I described it. Is it an S/A like
the $60,000 models? No. Like the $10,000 models? No.
Like the $5000 models? I don't think so. Like the current
hobby grade S/A's out and about? Better. Like the ICOM
R-9000's spectral display? I don't know, but I think it's
comparable in many ways.

Give me a frame of reference and perhaps I can zero in on
what you're looking for.

Source record: 182416

Went into RS to inquire about a replacement keypad for a pro-39 that had quit accepting input when you pushed the keypad or it would sporadically take it after numerous attempts. Was told the minumum charge was $69 for repair work plus parts which were quoted as 15-20 dollars also was told that more than likely the problem was with the circut board and not the keypad anyway..after several weks read on the internet where that model had a tendency to have the keyboard wear out and produce that problem..back to RS and asked another clerk about the keypads cost was told the same $69 repair charge ..asked how much the part was as I planned to install it myself..he said I don't know probbalt 15-20 dollars no offer or attempt to check the price even though I was the only one in the store..came home brought up the part number for the keypad from the internet called RS parts number and ordered the part total cost including shipping was $7.74...three days later the keypad arrived and 15 minutes after I had it installed in the radio..works good as new..
glad I did not listen to their advice..would of ended up paying over $75 and who knows how much time????

And if you had said so in the first place, those of us who know Bill Cheek could have applied the appropriate bullshit filters to the information you provided. But no, you had to resort to subterfuge. This speaks more to your credibility than anything I could possibly say.

>Credibility? You have got to be kidding?

Look who's talking.

>Besides, this forum is NOT the place to conduct business,

Then why are you doing it?

>conducive to resolving his problems. The WiNRADiO
>manufacturer isn't represented here. And I can't speak for

It's represented here by you, and poorly. If WinRadio wishes to regain any of MY trust, they should provide someone who DOES represent the company to answer questions here, and to specifically address your deliberate deceptions in regard to WinRadio.

>them. But he...and you....and a few others really thought
>you had a "live one" for a while, huh?

Are you actually PROUD of being a successful troll at the expense of the very company you are using as your identification? If I were running WinRadio, I would pull your dealership and possibly sue you for misrepresentation, fraud, and loss of Good Will resulting from your deliberate deception here.

>> I see Bill Cheek has posted, talking about the Spectrum analyser and VisiTune features - he's

>good or better than the one "Bill Cheek" started.

Heh. You knew that "Bill Cheek" has little credibility in this ng, so you deliberately used a misleading alias to deceive the readers here

into thinking that you were something you're not. This is probably
the lowest thing I've seen you do, Cheek.

>But "I" was the "new guy" on the block, see, which is sort
>of like an invitation for everyone to step up and extract
>some dues and taxes and penalties first. "Bill's" already
>paid up and they leave "him" the hell alone. Me..."I" just

You should have at least cross posted to Rec.Guns. They would have loved
a discuss that involved their hobby. Speaking of rec.guns, they have a
policy that all policy and political discussions be moved to Talk.Politics.Guns
We should do something simuliar. Why can't we move political or policy
discussions to Rec.Amateur.Policy or creat a new NG such as "Rec.radio.politics
or Alt.radio.politics"? What do you think?

And yet your only identification is the misleading "WiNRADiO Sales USA," and "winradio@san.rr.com.

>And I speak the truth, without mincing words or sucking up
>or pulling the wool over anyone's eyes.

It appears, upon closer inspection, that you may well be the infamous Bill Cheek in disguise. Those of us who know Bill Cheek also know Mr. Cheek's reputation regarding "the truth."

>There is a cost to those sorts of shennanigans. The lowest
>cost of all is the straight deal where everything's above
>the table.

So when are you going to lay YOUR cards on the table, Mr. "WiNRADiO Sales USA?" More to the point, why did you feel the need to deal from the bottom of the deck in the first place?

>Arrogance? Geezus, fella, I was called a liar. It's not
>arrogance. It's just telling it like it is.
>
>Call it what you want.

I call it deliberate deception, probably designed to increase your bottom line. There are several words for that in the context of UseNet newsgroups, none of them very complimentary.

Incidentally, I withdraw the favorable comments I made a day or two back about this "WiNRADiO Sales USA" person. I was evidently taken in by this wolf in sheep's clothing. Others who were mislead will no doubt reconsider any favorable thoughts they may have had toward WinRadio.

Speaking of dealing 'em face up, are you or are you not Bill Cheek?
If you are not Bill Cheek, who are you? And if you are Bill Cheek,
please explain to us in detail why you have attempted to conceal that
fact in these postings.

>But considering that you tried to hide your identity,
>perhaps you don't want any help.

That's pretty ironic, coming from one who identifies himself only as
"WiNRADiO Sales USA" with no other name or identification.
Particularly when that person then claims he's NOT speaking for
WinRadio, even after using this official-looking identification for
several days.

Well, that depends upon the vest doesn't it! If the threat level (grade
or class) of the vest is high enough almost nothing will get through.
But yes, the vests worn for regular duty can be defeated. Why does this
subject interest you so? OUCH!

> point and one point only:

Just one?

> There is a reasonably good chance that WinRadio has interference problems

As good of a chance that any $600 radio has "interference
problems"; not appreciably more or less. There are
"birdies" like there are in any PLL-controlled receiver.

And if the PC or monitor radiates anything into the pickup
field of the antenna, then it will receive those signals
same as any receiver worth its salt would. WiNRADiO's life
inside a PC is no more altered by that environment than any
other card or device that's designed to go inside a PC.

The way you guys talk....PC's ought to interfere with
themselves, fer Pete's Sake!

> and its representatives definitely have combatant attitudes.

Its representatives have not participated in this forum.
Your speculation is in error.

> A real businessperson would immediately diffuse the situation and not air such a
> dispute in a public forum such as this

The combatants aired it....as they were programmed or bid to
do. I responded, as was appropriate for me to do. After
all, we are in search of truth. To see what I mean, just
you TRY sending e-mail to some of these people. When that
e-mail comes bouncing back, RETURN TO SENDER - ADDRESSEE
UNKNOWN, you'll begin to understand. Send e-mail to me under
any of my addresses and watch me respond quick....

> - where the "real" customers lurk -those with computers and an interest
> in scanning.

If you are a "real customer", then stick it out and observe.
First we have to separate the wheat from the chaff. That
takes time. Secondly, this really isn't a business forum
and I am not pretending to make it one. I will, from time
to time...and I hope other commercial interests do the
same... post articles of wide interest to the group. Some

will have a commercial slant; some not. But ALL will be related to the subject of scanners and scanning, and none that I post will be overly blatant 'advertising'. Call it PR; call it what you want, but there is a difference between PR and sales ads. If it is a worthwhile deal, I will let folks know about it. And I won't always be the seller. I refer people far and wide...

Thirdly,I have my standards, one of which is that I am a hobbyist, too.... a person. If you don't like combativeness, don't initiate it with me and you can go to the bank that I will not initiate it with you. If you do open fire on me, you better duck and run because I will shoot back. You may not shoot for free. Comprende?

> I am a lawyer and radio hobbiest,

Really? Do tell! What say, then, you learn how to spell HOBBYIST. You voiced your opinion of how business people should act. Mine is that a lawyer should know how to spell what he claims to be. At least you spelled "lawyer" right. But one wonders about this'hobbiest' claim. At the very least, you should return your spell checker to where ever you got it. It's broke, pal.

See, you and I are on EQUAL terms, Mister Harrison, Esquire. Except.....I *am* a hobbyist first....FOR the hobbyist first; FOR the hobby first; and a businessman somewhere down the list a ways. I understand that *you* CAN, indeed, traipse into Radio Schloque or Rears & Sawbuck and throw your weight around and get all their sales people kneeling at your feet.

Sorry, Barrister, I don't kneel to any but my Maker. I do two-way deals, 50-50, with folks. If they don't want to deal with me, that's fine - it would be a bad deal. You know, do YOU want a client who doesn't want YOU? Of course not, Solicitor.

If folks want bugles, trumpets, and dancing girls, I refer them elsewhere. Those kinds of frills and fripperies only increase the cost of the product. I loathe artificial hidden costs and try very hard to not build them into my products. There are people in this world who appreciate that, and it is to them that my service and zeal are directed.

> but, honestly, would be turned off from buying a Winradio due to
> fear that if I had problems with the unit the company would fight me rather
> than help me.

Well, that is a legitimate concern. But obviously, you don't know me. So stick around until my name becomes

emblazed in your mind. I'm not going anywhere. I've been here a long time. I don't take any crap off jerks, nitwits, popinjays, head cheeses-in-charge, or even barristers. (Happen to have a fair foundation in law, myself.) But the bottom line is I don't dish it out....not first, anyway.

In any event, you will come to know me if you stick around, and one of the first things you will learn is that if you have a technical issue, I will stick with it (and you) until resolution. This is common knowledge. Not to you yet, I understand, but stick around and see.......

> If interference is really an issue, why not let PC magazine take a look at
> it in its "first looks" section.

Soooo, why not contact WiNRADiO Communications and offer them that fine piece of advice? I am NOT that person and I do not speak for the company. I can't contract or obligate for them. I can't even take under advisement any suggestions for them.

> That is all I have to say. No reply is necessary.

I hope that wasn't a command. I don't obey all that well.

And I deemed a reply absolutely necessary, because this newsgroup is a virtual place; not a store with me standing behind the counter. The same rules don't apply here.

Obviously.

Ferinstance, regardless of what you think of me, you wouldn't huff and puff and waddle up to me in "real life" like you did here for the first time. There'd be some civilities, a social amenity or two; some breaking of the ice; and then we'd deal....for better or for worse.

So lookee here, Solicitor, YOU changed the rules *first*. Don't run off sniveling and whining for your lawbooks to find grounds on which to sue me, just because I responded in some manner in which you are not accustomed. I'm not accustomed to being intimidated by lawyers upon first greeting.

Two-way street, Barrister. Take it or leave it.

Phil:
I don't know whether you are aware of the ICOM IC PCR1000, which is exactly as you describe below. I only wish my scanner was working for I would send you an article on it and a photo showing it attached to a laptop computer. Apparently, if you refer to ICOM's website, which the article only mentions but didn't provide, you will garner all the information you need. Hope this comes as a pleasant surprise for you. Regards.

Private conversation (on a telephone, 2-way, etc.) - no.
Not without the "someone's" prior knowledge and consent.
In other words, inform the individual of about what you
are planning to re-broadcast, then get his/her permission.

To abuse this precept is to hasten the day when the Fed's
outlaw even listening to someone's conversation. Then
only the Fed's will be able to listen to someone's
conversation.

Are you some kind of dumb-ass?
You can't scan digital signals because they are encrypted.
If you could pick them up - then what would be the point of going digital.

Reality really bites

I've written to this NG before on this subject but here goes again.
As an avid R/C'er I've come to find out that a good hobby store can
make any type/style of pack you need, and for a far better price than
most any other battery suppliers. A good store will have access to NiHH
as well as NiCd cells. Simply take your old pack to the them and see
what they can do...9 times out of 10 they'll be able to make you an
identical pack but with a much larger capacity at VERY reasonable
price.

Published: Saturday, October 18, 1997
Section: Broward News
Page: 1BR

DEALER
IN POLICE
RADIOS
ARRESTED

ANNE MARTINEZ Herald Staff Writer
The Miami businessman who tried to take Hollywood's police radio tower earlier this year was back in hot water Friday.

Metro-Dade Police arrested Alan Leonard Friday afternoon in his North Dade home and charged him with dealing stolen property, a second-degree felony that carries up to a 15-year jail sentence, police said.

``He programmed radios with Metro-Dade frequencies and sold them to people,'' said Detective Steve White, a member of Metro-Dade's Economic Crime Bureau and High-Tech Crimes Squad. ``We don't even know how he got hold of the program software to do this.''

Leonard, who already is on parole on a second-degree murder conviction for his role in an attempted robbery in 1978, was being held Friday at the Dade County Jail. Police notified the parole commission of Leonard's arrest and would likely revoke Leonard's parole and deny him bail, White said.

The FBI has been investigating Leonard, 39, for computer fraud and copyright infringement since December, when agents raided his home and business and seized a stash of Motorola radios, computer equipment and diskettes.

Metro-Dade jumped in several months ago when they took a statement from a man who said he bought two modified radios from Leonard for $1,300, according to an affidavit filed Thursday in the 11th Judicial Circuit Court in Dade County. The man turned over the two radios and was not charged with any crime.

``It's not like [radio] scanners where you can just listen to what's going on,'' Dade Assistant State Attorney Karen Gilbert said. ``They were able to transmit. That's what was dangerous.''

FBI spokeswoman Anne Figueiras said the agency is continuing its investigation and may file additional charges.

With access to Motorola software, Leonard was able to produce, use and sell radios that can access -- illegally -- the Motorola communication system

used by the FBI, Metro-Dade and other local law enforcement agencies.

Leonard made headlines in January for trying to seize Hollywood's communications tower, claiming it was part of a surplus of communications and radio equipment that he bought from Hollywood in December 1995 for $500.

The tower was included in a three-page equipment list attached to a contract signed in 1995 by Leonard and the city's purchasing director. City Manager Sam Finz said that list was never part of the original agreement.
The embarrassing episode was resolved when Leonard eventually signed an agreement releasing any claim to the police tower or any other towers owned by the city.

``It was ludicrous,'' said Finz, who added he was not surprised that Leonard was arrested. ``I'm pleased to say we have nothing to do with him anymore.''

Herald staff writer Amy Driscoll contributed to this report.

Well - can you honsestly say your replies have been informative? Maybe a lesson in mythology (grapes and such) - but you have yet to answer the origional question. Here, I'll quote it for you:

"Sorry Charlie - why should I tossup $200 to $300 over a conventional scanner just so I can use my mouse to tune it? Talk about OVERPRICED!!"

Any news on that front? Why should I pay up $200 to $300 over a conventional scanner? The question still stands. So far what Bill Cheek has said about WiNRADiO's ability as a Spectrum analyser and the VisiTune feature has been more informative than your references to classic liturature. Least ways Bill explained where the mouse came into play - a bit.

> I run my lab with most of the computer covers off....and
> some radios with the covers off. RFI is relative to the
> source, I guess.

Oh - so again, instead of dealing with the question you simply make an implication that something isn't right here with my system? Why - because you didn't build it? What's your point?

By the way - my PC is an Intel motherboard running an P5-166, 4 PCI slots and 3 ISA slots - no tweeks or 'golden screwdriver' work (in EE speak - it hasen't been modified after leaving the factory). Now, granted I'm only going by what was printed in the manual when I baught it. Similar to any of your 'non-radiating' PCs? Now, I'll admit - my scanners aren't what I'd call 'top of the line' - a BC200XLT and a Pro-2026 - but they do work and they DO pick up noise from my PC when the cover is off - SOMETHING is there. And you've yet to explain how, or even if, a reciever immersed in this 'apparently' noisey environment isn't going to have troubles. What have you done to make it work? How about some INFORMATION?

> > As far as saying serial interface is inadequate?
>
> Who said that? Where? When? I even complimented the ICOM
> for its capability to go mobile. Please don't distort and
> warp the truth.
>

That's why it was put as a question - see that mark at the end|? Again - looking for CLARIFICATION. You've made several comments about how "8Mhz" is better than "115k" for your purposes - while never mentioning just what those purposes are. Is that where

the extra cost goes for this thing? Filtering and shielding becuase you don't 'want' to make it an external device? Why isn't it an external device?

> > Get real - using even the most basic of hardware I can attaing
> > reliable speeds of 31.2k true data rates - with out compression and
> > all that crap.

> Okay, let's get real then. There is no recognized parameter
> of "true data rate". Nor of "crap".

Oh, excuse me - I was speaking as a consumer - you know, one of the types that origionaly asked WHY is it internal and not an external via serial port device? What we got back was some generalised EE speak about how the ISA bus is somehow 'better' than a serial port. And as far as 'data rate' (true or otherwise) - how about recognised (at least by the PC user community) data transmissions of 'bits per second' - you know - how many bits per second you can move from device A to device B (I even gave it a number!) - used to tell how much information (granted in it's rawest form) you can transfer - like via an RS-232 port or a modem? Or do you have some other way of looking at this that's too sophisticated for the 'public' user. And I appologise for going 'local' with "crap" - I was talking about compression, data formats, protocol differences and the like. Things that can camoflauge or shade rates of data transfer from device A to device B. Such as the often mistaken DTE and DCE rates. And again - still no idea why you want to transfer data even faster than 31.2k - least from what I'm reading from you - you need faster data transfer than that.

> > This WiNRADiO dude has lost ALL credibility - and as far as their product goes -
> > I'd give 'em aobut $50 for one - that's it.
>
> You never gave it any credibility in the first place, so
> there was none to lose. How about if I give you $50 to not
> buy one? It would be worth that much to keep you away.

Read what I said again - I said, "WiNRADiO dude" - not WiNRADiO. It's YOU that has lost credibiltiy - I'm still interested in some FACTS and INFORMATION about this product. You're the one thats blown it - not your radio, yet. Hey - save your money and buy a book on public relations - it would be better spent.

> <grin>
>
> How's about if I send you over to Uniden or Icom?

No need to send me to anywhere else - already there and much happier with their people and attitudes, thank you.

I'm not very knowledgable about scanning hardware. I've read a little about frequency counters, but haven't gotten any good info yet. I assume these are designed to give you the freq of the nearest transmitting source? Are they any good, is there great variation in performance between models? How about their range. I was thinking of look at the radio shack model, but also seen some from optoelectronics. Any suggestions or advice welcome.

R10s shipped since about mid July cannot be restored. Only early
versions can. The design was changed to prevent them from being
restored.

The mod to unblock the R10s we developed and offered on this newsgroup
for $1 does not work on recently manufactured R10s.

In the earlier part of September, a company called Ladyfinger or Ladybug (or something like that) had a Nickel Metal Hydride (NiMh) battery pack for the Uniden BC235XLT Trunk Tracker, for $18. It was all made up with shrink-wrap, & wired with the little connector to accomodate the battery connector inside the radio. I emailed them, but lost their email address. They said that the batteries would be ready in a month or so. Does anyone have their email address, or has anyone obtained these battery packs yet? Only comparable NiMh pack I've seen for the 235XLT is available from Metro-West for $45, plus shipping and applicable taxes.

Since there are so few digital system in use there are very few people interested in monitoring them - yet. Until there is a broad customer base no manufacturer can sell enough units to cover the research&development, plus tooling costs, to produce such a scanner.

Trunked systems have been in use for more than 10 years and we're only just now seeing the first generation of trunking scanners.

The sponsor of this bill is reacting to intense pressure from scanner buffs, manufacturers and others and is considering amending the legislation narrowing the prohibited frequencies.

However, I believe we should remain vigilant on this issue and address the appropriate representatives in Congress.

Mr. Nelson,

The Electronic Communications Privacy Act of 1986 made it illegal to simply listen to cellular telephones. The act was later amended to include cordless telephones as well. Since 1994 it has been illegal to produce or import a scanner into the U.S. that will directly tune the cellular telephone frequencies. A current proposal before Congress, HR2369, if passed, will extend that ban to all frequencies used by Commercial Mobile Radio Service licensees.

I see from one of Bill's latest posts this WiNRADiO will also perform as an RF spectrum scope, and has this new "VisiTune" feetchure. Bill makes it sound attractive and gives information as to comparable tools and prices. Sorta makes me wonder what else this 'gem' will do. Seems to me that for a communications based product - WiNRADiO's people can't communicate for beans.

I like the idea represented by WiNRADiO - was even interested in trying one out, but when this jerk started spouting - sheesh. They aughta get a new public relations rep. If he'd a been able to actually speak to the real features of this product and not get mouthy - he may have actually benefited his cooperate efforts. Explain WHY this thing really is worth close to $600 - instead of quoting mythical poetry and dropping little ego bombs. (you feel any better? I hope so)

Anyone else ever hear of any other companies that intentionally belittled potential customers - just cuz they didn't buy into their propaganda? If this is such a 'wonderful' product - how about let the rest of us in on WHY

Having been in retail sales for over 15 years - I'd a fired the jerk that's been posting here LONG ago. If this 'bloke' isn't a PR/Sales rep - he needs to get a the least a hand slap from the CEO and quit representing WiNRADiO in public. If he is - he needs to find a different job. Sounds like he's an engineer type - get out of PR work then.

Give 'em a bit o credit - at least they have confidence in their product to let one of their own give 'em a public black eye!

On Mon, 20 Oct 1997 18:36:51 -0500,
in the newsgroup rec.radio.scanner,
Charles J Herbst <chas111@accessus.net>
from accessU.S., Inc. thoughtfully posted:

> I have a Bearcat 300 that hasn't been turned on in approx 2 years. It
> won't hold a memory when you put in frequencies. could the power
> transformer be bad?

If it powers up, the transformer is okay.

You can still power it with 12VDC via the rear-panel DC jack if
the power transformer is bad (needs about 500mA).

Most likely C98 needs to be replaced. It is a electrolytic cap on
the bottom of the "RF" board, next to the small transformer near
the front of the PCB. It is clearly marked "C98". You can't miss
it!!

Replace it with a 47uF good-quality Electrolytic capacitor.

The circuit containing C98 generates various voltages for the
display *and* the memory programming voltages.

See the Bearcat Repair Tips:

ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner/Repair_Tips_for_Bearcat_Scanner_R
adios

The fix is less than $1!!!

In reguards to Dr Bellows, Yes... Ms Eden is Still a doll.... however, I still beleive that we are suppose to "advance the radio art" and my question is this, what advances the "radio art"? being able to build a decoder for morse? or decodeing morse by ear? I've heard all the arguements about it being the only mode that can get through etc, and personally, I thinks thats not true, there are digital modes that claim to be able to do that, and as for efficency, whats more effecient, tapping out 3 pages of words and thoughts at 20 WPM or at 28,8??? at 28.8 or even @ 1200 (which is what my TNC is) you are on and off quickly, besides, My Kam decodes Morse and encodes it too! so, other than tradition whats left? as for the code itself I feel that it is a fun "MODE" for those who want to use it, and No, I'm not for "Banning its use" but I do feel it has outlived its purpose as a testing function, I'm all for testing (technical) and (law) but thats about it, lets face the facts, what if you had to know Japaneese first to know morse code, or what if testing had to be done at every renewal? then would there be more people looking at the testing? to me, Morse is a phyco-motor skill which I know I have trouble with, I can send like a son of a gun, I've been clocked at 13 WPM with a staight key, but I just cannot understand it by ear, (sometimes frustration gives a person time to think) and other than tradition, I just don't understand it !

Could anyone give me a handle as to what these items are worth in their present condition in dollar value. I'm clueless.

So I'll have some idea of what I can swap them for if at all or use the cash to buy a tube tester . I was looking to obtain a military type tube tester (I-177, TV-2, TV-3, TV-7,etc.) or a Civilian Hickok model or maybe a B&K tube tester.

ELECTRONIC TEST EQUIPMENT (All need repair)

1. GE SWEEP GENERATOR Type ST-4A. This is a real oldie. Needs repair. Good forsomeone who's into old radios and wants to add flavor to his/her repair bench of with an old piece of equipment. This unit has no manual or accessories with it. It's in average condition for it's age I would guess.

2. HARRISON 6290A (HEWLETT PACKARD) DC POWER SUPPLY. 0-40 volts & 0-3 amps. Needs repair. No manual or leads, etc. just unit. Probably needs output transistor. Cond. is average.

3. HP 6207B DC POWER SUPPLY. 0-160 volts & 0-.2 amps. Needs repair. No manual or leads, etc. just unit. Probably needs output transistor. I sold the identical sister unit of this item to a tech and he said the repair it needs it relatively easy (with knowledge of the unit of course). Very nice condition.

Any thoughts on the above equipment is appreciated.

Thanks,
Lance

> > source, I guess.
>
> Oh - so again, instead of dealing with the question you simply make an implication
> that something isn't right here with my system? Why - because you didn't build it?
> What's your point?

My point is that I don't understand your point. You hung
the RFI issue up there as if it were fact and cosmic truth.
It isn't. But I didn't want to get personal and call you a
liar or insinuate that you didn't know what you were talking
about. So instead I relayed my experiences which are true.
I operate a shack and shop without covers on a lot of the
stuff. WiNRADiO doesn't suffer from RFI any more than your
radios would or if everything were buttoned up.

It's your point that was at issue. Not mine. I don't have
a point other than WiNRADiO is a pretty good market entry
and deserves a chance to make it on its own without
untruthful and inaccurate accusations made against it.

> By the way - my PC is an Intel motherboard running an P5-166, 4 PCI slots and 3 ISA

> my scanners aren't what I'd call 'top of the line' - a BC200XLT and a Pro-2026 - but
> they do work and they DO pick up noise from my PC when the cover is off - SOMETHING is
> there. And you've yet to explain how, or even if, a reciever immersed in this
> 'apparently' noisey environment isn't going to have troubles. What have you done to
> make it work? How about some INFORMATION?

I plugged it into the ISA slot; did the simple setup;
stuck an external antenna on the BNC jack and an external
speaker into the speaker jack....and went to town. No
problemo. WiNRADiO is exceptionally well shielded and the
signal lines in and out are well filtered. The computer
contributes less RFI than the monitor.

You have to remember, I am NOT the company and I do not
speak for the company and I did not manufacture, invent or
even contribute to the invention of WiNRADiO. I just use it
and am reasonably impressed with it overall. And I think it
deserves a place on the market. I like it enough to sell it
AND support it. I do not think WiNRADiO is a panacea, but I
think it's time has come. There is a place for shirt-pocket
transistor radios and then there are places for the old boat
anchor R-390 tube-type receivers. Computerized radio has
come of age, let's put it that way.

If you disagree, that's fine. But you don't have to get
nasty with it....and my name isn't "Charley" just like yours
ain't "Numbnuts".

> > > As far as saying serial interface is inadequate?

> > warp the truth.
>
> That's why it was put as a question - see that mark at the end|? Again - looking for
> CLARIFICATION. You've made several comments about how "8Mhz" is better than "115k"

Well? Isn't it? Besides, external devices do not
communicate via the serial port at 115-kbps with one
exception being LapLink and related technologies, and when
you use those, your computer comes to a virtual standstill
until that serial connection is relinquished. The ICOM
PCR-1000 is no doubt a very good radio....and unparalleled
for mobile computer applications.

But it still sneaks along at 20-ch/sec. WiNRADiO does 50.
WiNRADiO does not appreciably impact the CPU loading. A
serial port connection without an external microprocessor to
help things along will, most assuredly, load up the CPU.

Fifo buffers in the 16550 UART certainly help, but are not a
panacea. The ICOM radio communicates with the PC at about
9600-bps, I'd guess. WinRADiO communicates with the CPU at
the bus speed. It's a face value sort of thing.

Just like if you say you want to take your radio portable
and still compute, it is face value that you need the ICOM.

> for your purposes - while never mentioning just what those purposes are. Is that where
> the extra cost goes for this thing? Filtering and shielding becuase you don't 'want'
> to make it an external device? Why isn't it an external device?

How do you make a bus device external? I don't understand.

If you want an external computer controlled radio, you can
choose the ICOM, or any of several other computer-aided
radios; or any of several scanners that can be retrofitted
for computer connections. If you want a radio that does
more than twist knobs and the usual stuff, and still lets
the computer be free to multitask and multithread, then you
are going to have to look at WiNRADiO and the ISA bus where
there is vastly more computing power available than at the
serial port.

> > > Get real - using even the most basic of hardware I can attaing

> > > all that crap.
>
> > Okay, let's get real then. There is no recognized parameter
> > of "true data rate". Nor of "crap".
>
> Oh, excuse me - I was speaking as a consumer -

Well, in one breath you were coming off as a pro who knew
more of these things than me. Maybe you do, but I expect
you to show it, if you do....with truth and correct
terminologies.

> you know, one of the types that
> origionaly asked WHY is it internal and not an external

Why do trees grow in the ground and pigeons poop on
buildings? I don't know. External devices are fine for
certain applications. Internals take up where externals
leave off in terms of power, data rates, and leaving the
computer free to multitask and multithread.

> And as far as 'data rate' (true or otherwise) - how about
> recognised (at least by the PC user community) data transmissions of 'bits per second'
> - you know - how many bits per second you can move from device A to device B (I even
> gave it a number!)

Inside the computer, that's called DTE. Outside the
machine, it's DCE. And when the two are equal at the max,
the computer becomes very, very busy......

> still no idea why you want to transfer data even faster than 31.2k - least
> from what I'm reading from you - you need faster data transfer than that.

Be civil and decent with me, and I'll explain anything you
want to know or go find out if I don't know. As it is, I
have explained the above several times now. Fast data is
not always the goal. But WiNRADiO is capable of a LOT of
things, including spectral viewing and all those actions
would bring the CPU to a standstill from the serial port.
From the ISA bus, it's barely a ticker on the graph.

> Read what I said again - I said, "WiNRADiO dude" - not WiNRADiO. It's YOU that has
> lost credibiltiy - I'm still interested in some FACTS and INFORMATION about this
> product. You're the one thats blown it - not your radio, yet. Hey - save your money
> and buy a book on public relations - it would be better spent.

I don't do "PR" on the newsgroups. PR is usually a pack of
lies and bullshit, designed to enable someone to reach into
your wallet. I prefer truth and straightforwardness. If it
costs a little bit, that's fine. At least I still get to
live with myself and sleep good at nights.

I'm not here to sell WiNRADiOs. I'm just here. I've been
here for a long time. And I will continue to be here for a
longer time. I have decided to sell WiNRADiOs because I
think they have a place on the scene. But I won't sell my
soul to sell a radio.

If I have lost credibility with you, that's fine, but like I
said, from your FIRST post there wasn't any and therefore
none to lose in the first place. You came on with the
assertions and inaccuracies from the git-go. Talk about
"credibility", geez, dude, you don't have the common decency
to identify yourself, and worse, you use bogus "From" and
"Reply-To" addresses:

WiNRADiO is not present here. I speak for myself. I just
happen to sell and support WiNRADiOs.

And in that speaking, I will observe that this newsgroup
has shot it's own self in the foot.

I'll discuss that sometime under a separate thread.

Let me challenge you to a little project, please. Go back
to the start of this thread....and follow it with a slightly
open mind. Try to see....REALLY SEE....from the time line,
just how *impossible* a few others made this business of
communications !

It takes two to communicate, pal. If you don't want to
evaluate this entire thread, then how's about evaluating
your first post to this thread. Considering the way you came
on, what did you expect?

But look at other posts, if you dare. Look at firsts, and
then the replies. Ferinstance, look at a post where someone
was civil and decent to me and see if you can find where I
did anything but go the extra mile of civility and decency?

Ummmmmm....I *am* a master communicator, but you know what?
Without any other communicators, it absolutely doesn't
matter one whit.

What does matter is that this newsgroup and the radio hobby
as a whole, won't give a new guy on the block the remotest
semblance of a fair shot. He's tried, convicted, and
executed before he has a chance to open his mouth.

In a word, if it's not Icom, Yaesu, Kenwood, Uniden, Radio
Shack, or Optoelectronics, then it ain't squat.

This newsgroup advertises FOR these players, for pete's
sake! But god forbid a new player to come in and announce
his wares..... But how the hell are people going to talk
about things until they're established? They can't get
established...is what I've been finding out for many years.

There is something terribly wrong with this picture.

And you guys wonder why we're losing our liberties....???

Actually, if one were to construct one's own scanner, 47CFR15 is
pretty lenient. But what you're suggesting isn't quite a simple as it
may first appear.

If you're relatively handy, you could build a project such as the
mini-R2 (described in QST a couple years ago). If you get your hands
on some SRA-1H mixers, you should be able to run this radio up to 1
GHz or so. It has even been constructed with rat-race mixers for use
at 5 GHz...

Build a good LNA and filter set so that you can keep your coverage to
just one band, and then go to work on a synthesizer. There are some
high resolution DDS synthesizers out there for about $100 with about
16 MHz of coverage. I bet you could lock a VCO from Mini-Circuits to
one and use a prescaler to divide down...

The mini-R2 is a good start because it is a direct conversion phasing SSB receiver. It has I and Q channels which not only makes it useful for SSB but NBFM, AM, and even PSK or QAM digital signals. Of course, you'll need to know how they're modulated. But you have a good start for a digital signal demodulator there...

Already we're up to some impressive complexity. And you want to kit this together... I dunno. I can envision spending at least $500 on an endeavor like this, and I'm just thinking of keeping it on one band (800-1000 MHz), with no scanning features. I would use a PC for that. The final costs, especially for prototyping, could be far higher.

I figure that those who want to listen to lower band activity would up-convert to 800 MHz. By the time you're done, you've put a lot of effort and expense in to doing this. It's much easier to build up or down converters and install them ahead of a store bought scanner.

In any case, I don't think cell phone companies care if you really listen to conversations on the air or not. I think they just want to make things difficult for you and to make sure the climate is such that if you do listen, you won't be saying much about it.

Home built equipment isn't really what scares the cell phone companies. They probably figure that anyone with that kind of background is 1) unstoppable, 2) covert, 3) not likely to cause trouble. And in general, they're right.

I bet at least half of the folks who call themselves "scanner enthusiasts" have never built an electronic project of any kind. Not many scanner hobbyists are likely to have the technical background to build a down-converter, let alone a scanner.

And before anyone flames me for what I just wrote, keep in mind that I don't agree with what our legislators have done/are doing one bit. However, their attempts do make sense in their own perverted way. (I'm not going to repeat my previously posted objections to the ECPA or the proposed legislation that the likes of Billy Tauzin want to make along those lines...)

I am moving from my home in Staten Island, NY this week and must liquidate a lifetime collection of Amateur/SWL gear, scanners and hi-fi equip. List includes Hammerlund SP-600 receiver, Drake R4B, Kenwood R-1000, Hallicrafters S-180, RCA Marine direction finder (great for BCB), Universal M-7000, AEA PK-232, military Panadaptors, and more (many Bearcat scanners and tuneable VHF-UHF sets also).

Also Luxman Graphic EQ, Phillips Stereo TV, Allison speakers, Thorens turntable, Haffler amp.

Please e-mail me (with your Phone# if possible) if you are interested as gear is available by appointment only THIS WEEKEND (Oct. 25 and 26, and possibly Friday too!).

Everything MUST GO and most is in excellent cosmetic and working condition. If it is not working, make me an offer and chances are I will take it.

Looking forward to seeing you THIS WEEKEND.

Paul

This post and the 400 other posts relating to this thread lead me to one point and one point only:

There is a reasonably good chance that WinRadio has interference problems and its representatives definitely have combatant attitudes. A real businessperson would immediately diffuse the situation and not air such a dispute in a public forum such as this - where the "real" customers lurk - those with computers and an interest in scanning. I am a lawyer and radio hobbiest, but, honestly, would be turned off from buying a Winradio due to fear that if I had problems with the unit the company would fight me rather than help me.

If interference is really an issue, why not let PC magazine take a look at it in its "first looks" section.

That is all I have to say. No reply is necessary.

- Adam

I AM TIRED OF ALL THIS F.C.C. CRAP (Feds Creating Communisim)
I can't believe we can't even fix our own radios!!
I have a Service Manual for the PRO-2006 and the (UG) BC-2500XLT.
Anyone who wants a copy,e-mail me.
I am in desperate need of a copy of the manual for a Pro-43 and a Pro-2042
I just moved and my box containing those items didn't!
I have $ 3,000 worth of Radio Shack radios,and as a scanner nut,
I have defended these radios many times in the past.(mistake ??)
Mostly because they good dependable radios,the service manual was easily
available as were the parts to fix them among all the other great specs.
One idiot at the RS told me that the reason the RS has restricted the
sale of these is:
1- The FCC "ASKED" them to.
2- The mods to make them "CELLULAR CAPABLE" are included in the manual!!
WE all know thats BS.....
Please E-mail me at:
scanist@acmenet.net

>Norman Bowen Senior RadioShack manager that said I was missgiven my information. He wrote "RadioShack has the service manuals for sale at min of three (3) years.<

Mr. Bowen is mis-informed. The policy is so new it really hasn't filtered down to the store. If Mr. Bowen would try to order a manual for a customer he'll find that he cannot. However, that may soon change. Tandy has taken a heck of a beating on this one, and they've got their attorneys looking for a way out.

Help,

Trying to find the pd output on a Pro-46 but all the boards inside are made by uniden. Does anyone have a schematic or can anyone tell me which IC and pin number to use for posag etc output.

Any Help Would be great
Thanks

Yea, and I guess the dumb cop would never notice a cord coming from
your cassette deck and going directly under your seat. Oh I forgot
that's the most convienent place for your CD player...just tell him that
when he asks, he'll never know the difference.

I found the response quite reasoned and polite, given the vitriol
aimed his way. I also found it professional and informative. I
certainly wouldn't rule out buying the product based on his posts.
I'd like to see MORE information about this radio posted here by the
manufacturers or their representatives. We're all intelligent enough
to realize that a seller is going to emphasize the good points of his
product, and downplay the disadvantages. We do NOT always know how to
judge the biases of third party reports.

> Surround a receiver with a bunch of divided down square wave generators.
> What a brilliant Idea!

Be reasonable for a minute and think.

Why would you suppose a sharp, smart company would invest
mega-thousands of dollars into a receiver that was flooded
with interference?

Why not first sit back and meditate on the matter for a bit.

Truly, pal, the WiNRADiO receiver works pretty darned fine.
Why don't you go to a radio store and ask to see one demo'd.

After all....and think about THIS: all modern CPU-based
receivers....which is just about all receivers other than
the broadcast types.....have square-wave generators inside
them.

Think about that. You may determine there is more to it
than meets the eye or the old wives tales.

44.180 44.200 44.320 44.360 44.400 44.460 44.480 46.610

46.630 46.670 46.710 46.730 46.770 46.830 46.870 46.930

46.970

Be aware that the 43-44 MHz frequencies are shared with trucks and buses (motor carrier radio service), so don't be surprised if you hear other traffic covering up someone's cordless phone conversation. For best cordless reception try using a Rad Shack dipole mounted as high as possible, or Rad Shack's 6 foot scanner antenna with a TV preamp. Good Monitoring!

2086. WiNRADiO Spectrum Analyzer with VisiTune

Newsgroup: rec.radio.scanner
Date: 1997-10-22 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <344e63f0.100011898@news-server>
Source record: 182547

Copyright (c) 1997 <All rights reserved> Bill Cheek

Harken! Ye Publique Notice! Hear Ye!

Know how professional spectrum analyzers cost anywhere
from $10,000 on up to $60,000? And how hobbyist versions
from ICOM, etc, can cost an arm and a leg? Well, hold on
to your socks.....

Little may have anyone known, but a great spectrum analyzer
(albeit inexpensive) has been on the market for quite a while
now in the form of WINRADIO!

Yes, that's right, WinRadio has spectral display capability!

Now available is Version 2.12 of the standard control program
for WinRadio, that contains an RF SPECTRUM SCOPE with some
pretty awesome capabilities.....free upgrade, too!

For more information, including download of the upgrade software:

http://www.winradio.net.au (Australia)
http://www.winradio.com/home/download.htm (USA)

E-Mail: info@winradio.net.au (Australia)
E-Mail: winradio@san.rr.com (USA)

And now, a brief overview of the RF SPECTRUM SCOPE capabilities
in Version 2.12 of the WinRadio control software:

Version 2.12 contains some basic refinements of the main control
program and one whopper of a new feature to make the competition
eat their hearts out: an RF Spectrum Scope, basically a spectrum
analyzer feature previously found only on very expensive radios,
or as an expensive add-on! Zowie! It's too cool for words!

One of the slickest things about the new RF Spectrum Scope is the
ability to position the cursor on a "blip" and instantly, WinRadio
tunes to that frequency! Bzzzaaaap! That quick!

Imagine dragging your mouse across a scanned spectrum; click on a
peak and you are tuned - the Spectrum Scope takes care of that.

Then hold the right mouse button down and keep dragging the frequency
cursor - and that's the real Visitune trick: The receiver will tune
continuously, smoothly following your hand movements.

The scanned frequency spectrum will be visible in the backround, and you will hear the signals corresponding to the peaks on the spectrum, as you move past.

You can also select the "manual refresh" option, and the spectrum will update behind your cursor.

And if you were wondering why it was made possible to control more than one WiNRADiO with one PC, (up to eight!!) here is one of the reasons: If you install a second receiver, then you will be able to see the backround frequency spectrum updating continuously in real time, while you are exploring the frequencies with your second receiver!

Visitune has brought about a major shift in the way we tune a receiver. Instead of the old tuning knob and dial, we will increasingly be seeing a spectrum analyzer at the centre of a virtual control panel of a PC-based receiver.

Tuning a communications receiver will never be the same again!

Two simple points to remember when using the WiNRADiO Spectrum Scope:

* Click the left mouse button to tune.
* Hold down and drag to Visitune!

The RF Spectrum Scope has twelve selectable spectrum scan steps as follows: 1, 2, 2.5, 5, 9, 10, 12.5, 20, 25, 30, 50, and 100 kHz; two Resolution Bandwidths: 6 & 17 kHz; and a slew of setup and control options, including single and continuous sweeps; Max/Min/Previous/Current sweeps in different colors (especially slick for identifying 2-way systems that key and unkey all the time, in contrast to broadcast and continuous carrier signals that are always present.) WinRadio can be muted or unmuted during sweeps.

Sweeps can be set by either of two criteria: start-stop (lower-upper limits), or center freq and bandwidth. Wicked!

Utterly delightful is the ability to save the spectrum screen to a very small file and subsequently to reuse it as an active display, or later configure it as a photograph of a sweep. Hundreds of sweeps can be saved in a very small amount of disk space. A test sweep of the 88-108 MHz FM Broadcast Band required all of 1250-bytes.

The RF Spectrum Scope, has a Zoom-In / Zoom-Out feature to make the spectral display appear as detailed or not as you choose. V2.12 upgrades the main control program in a number of subtle ways, including an S-Meter that shows numeric values of 0-100 as well as the original bargraph display. The RF Spectrum Scope shows the relative S-meter numbers, too! (A new scanning Squelch was added to the main program, too.)

Spectrum sweeps can be set to pretty much any desired limits, though the narrower, the more efficient, of course. I'm not sure what the sweep speed is, but it would be measured in steps

per second, and therefore is probably sync'd to the Scan/Search
rate for the main radio at 50 per second. Given the twelve
sweep steps mentioned above, it is possible to sweep 20-MHz
of spectrum in a few seconds.

As a long-time user of WR I thought I would put in a comment or
two.......If I could have only one receiver, it would not be WR.
My first scanner HAS to be a portable.
There is internal interference. But It is a much smaller problem than
I have when I have my ICR7100 within six feet of my computer. And most
things I enjoy are in the same room as my computer.
Admittedly, WR is not as powerfull a receiver as the ICR7100 but it is
good.

As for controlling WR with the mouse.....beats remembering what all
the knobs on a dedicated set....especially with some having second
and third functions....are there for.
And price comparisons ? Depends on the comparison. The Icom would cost
me around $3000 (Australian) to replace....last time I looked, WR was
about $ 700 (Aus). Sure....you have to own a computer.....but I would
,anyway. I have recently upgraded from a 486 to a pentium....the radio
card swapped over without a problem.
Speaking of upgrades...the WR software has been improved several times
in the past year...I monitor their website and download the new
version for free. The WinRadio I own now is vastly superior to the
one I bought 18 or so months ago. (thought I had better put that in
...in case someone did a Dejanews and found one of my complaints
regarding the early version).
Biggest improvement? The Spectrum Scope which sweeps user defined

bands and shows active frequendcies on a graph.
Suggested improvements? Give me a realtime bandscope as well so I can see nearby active frequencies while monitoring a particular freq.

Brian....(satisfied customer with no other relationship with the company other than we share a continent)

I'm not a spokesman for the company. I speak for myself.
And I speak the truth, without mincing words or sucking up
or pulling the wool over anyone's eyes.

There is a cost to those sorts of shennanigans. The lowest
cost of all is the straight deal where everything's above
the table.

Arrogance? Geezus, fella, I was called a liar. It's not
arrogance. It's just telling it like it is.

Call it what you want.

2093. ****MUST SELL RADIO GEAR****

Newsgroup: rec.radio.scanner
Date: 1997-10-22 00:00:00 UTC
From: heatwole@clark.net
Message-ID: <62jgi4$l8e@clarknet.clark.net>
Source record: 182554

I have the following radio radio gear for sale. All are in very good cosmetic condition and are in perfect working condition (as far as I can tell). Buyer pays shipping.

Cobra 23 Plus Mobile CB-
40 AM Channels, LED signal strength meter, LED channel display, 3 NOAA Weather channels, handheld electric microphone, owners manual, TX/RX indicator, mounting bracket, volume, squelch, channel selector, schematics diagram, and built in speaker

Kraco CCB-4007C Mobile CB-
40 AM Channels, instant channel 9, mounting bracket, owners manual, optional PA feature, handheld microphone, volume, squelch, channel selector, schematics diagram, TX/RX indicator, LED channel display, and built in speaker

Radio Shack PRO 2026 Scanner-
100 memory channels, delay feature, scan and search, built in speaker, mounting bracket, home stand, priority feature, lock out feature, manual feature, 1 touch weather, marine, fire, air, and police bands, volume, squelch, owners manual, and original box

COVERS: 900 and 46 MHz cordless phones, NOAA weather, almost all law enforcement, 10, 2, and 6 meter HAM radio, AM aircraft, VHF lo-band, VHF government, government, VHF hi-band, UHF hi band, UHF lo band, 800 MHz stuff

Cobra Trapshooter 3 Radar Detector-
City feature, mute, built in speaker, owners manual, volume, dim feature, signal strength, cigarette outlet power cord, windshield mounting bracket, detects X, K, and Ka radar

I would like to sell all of the above as one. I'm asking $250 plus shipping for all. Please e-mail if interested. I will trade for a Uniden BC9000XLT with a Uniden pre amp and a GRE super converter. Thanks for reading and let me know if interested!

Whew! A golden gem of truth emerges!

> My feeling about WINRadio is that unless it has something REALLY super
> about it, I'd pass.

There are occasions when it is super. Times when it is not.
Depends on the use, the need, and the situation....and the
imagination and inventiveness of the operator.

> I occasionally have to move my radios, and my
> computer sometimes crashes, and I would NO be happy if a crash happened
> while something really hot was happening. If power goes out now, I can
> take 3 scanners to the car and plug them into an inverter, can't do THTA
> with the computer.

I run a computer on an inverter in the mobile service van.
Doesn't take a big one. But I get your point, and I agree
the serious radioist probably would not own JUST a WiNRADiO.
For one thing, he'd had a handful of other radios from the
years past. WiNRADiO is only a year old now...maybe a little
more. So WiNRADiO buyers usually have other radios anyway.
I sure do.

> I see it as a product with a small market, probably to those that 'play'
> with scanners (and have $$ to spare) rather than use them seriously
> (like media people).

Quite contrary, actually. WiNRADiO can serve as a data
acquisition system for one thing, and for another, it
comes with an awesome "RF Spectrum Scope", i.e., a
spectrum analyzer. If you're looking for signals
across a band or swath of spectrum, the RF Spectrum
Scope will detect and show them. Tell me that ain't
serious stuff! The scope also has a memory for
Min-Max and previous sweeps. Not only that, but you
can then save the sweep display to a file and display and

tune from it later. Tell me that ain't *serious* stuff!

Tune? Sure. WiNRADiO now has VisiTune(TM), a feature
where after you have a sweep on display, you use the cursor
to manually scan and stop across that sweep. The mouse,
of course, moves the cursor. It's utterly wicked, actually.
There's a lot more serious stuff associated with the
RF Spectrum Scope and VisiTune(TM), but you get the drift?

> -> Now you begin to stray from pure candor. Most Pentium PCs have
> -> four ISA slots,
>
> Not true, over 70% of available Pentium-class MBs have only 3 ISA slots.
> A few have 5 ISA slots, but those are the most expensive boards
> available.

I *build* computers - nice, big, fat, juicy ones that will
knock your socks off. Without even asking for them special,
every Pentium motherboard that I order in here has four ISA
slots and three or four PCI slots. I may have seen one or
two with three ISA slots but can't remember for sure. It
would be a low-rent board like that. Very low rent.

That's what I said. Do you have a comprehension problem? Or are you
just trying to stir the pot?

> Are you omniscient?

No. If I were, I wouldn't have been taken in by this deception.

> Your comments are childish.

Sez you. So are you one of Cheek's sycophants, or are you Cheek
himself posting under another pseudonym?

It's not so much about the radio as it is about the deliberate
deception by Bill Cheek in trying to pass himself off as a
representative of the WinRadio company.

You got that right. If I were WinRadio, I'd be on the phone canceling
Cheek's dealership, and then posting that fact in this newsgroup. No
legitimate company needs this kind of P.R.

I am interested in installing the discriminator output
for my Pro-2005. I am a novice

when it comes to electronics modification. Was wondering, how
hard the job is, and if it

would be wiser to have a PRO do it.

If anyone knows of a shop that does these mods,
please forward the info.

Thanks...

What's IDXC? The Internet DX Club is "free" to all Amateur
Radio Operators and Shortwave Listeners that had 100 or
more users from different countries visit there web page.

There are upgrades available for 200 and Honor Roll with 250
or more countries to had visited your web page. The awards
are displayed to the right and I hope you will display them on
your page to help us letting the world know about the IDXC
Award.

A monthly list of members and the number of countries
submited will be published for others to track your
progress.

In the old days of party lines, everyone learned very soon that there was
no such thing as a private conversation over the phone, if you were on a
party line.
Cell phones are today's version of the party line. Privacy laws are great
if there's actually privacy to protect. Transmitting your conversation in
the clear over an FM radio transmitter is not private. Many businesses
actually pay large amounts of money to help people listen to exactly such
broadcasts. An accident of placement in the spectrum does not confer
privacy, as some would think.

I had a similar problem with my 1500. I was able to pick up a few of the strongest broadcast stations, but that was about all.
The problem was the input amplifier (FET connected to the antenna I believe) was blown. So basicly there was not much signal getting through. Of course the problem could be other components blown in the chain, but odds are it is the input amp.
ACE Communications repaired mine promptly for about $50 as I recall. Thats a good price. I dont know if they still work on AOR stuff, but you can run them down.

Good luck
Jay

2111. Re: FM RADIO on a scanner?

Newsgroup: rec.radio.scanner
Date: 1997-10-23 00:00:00 UTC
From: Bill Crocker <billc@rust.net>
Message-ID: <344FD8EE.AADF82CC@rust.net>
Source record: 182324

Some scanners will cover standard FM broadcast band, 88-108MHz, "WFM" (Wide FM). I have an ICOM IC-R10 that will receive this band. Other examples are the AOR-8000, the ICOM IC-R1, and others that I'm sure the group can provide. Some scanners can cover the required frequency range, but operate only in "NFM" (Narrow FM) mode. This results in very poor audio quality, due to narrow RF frequency bandwidth, which clips the high and low audio frequency response. One radio with this problem is the Yaesu FT50R HAM HT.

Not sure why you brought me into this one dALe, however I have no need or want for Teflon coated bullets. I also have no wish or desire to ever shoot at a Law Enforcement Officer. Don't know how they do thing in Tecumseh Mi, but here we respect our LEO's. As far as someone such as yourself wearing a vest, then a head shot would be in order. Not difficult at all to do if you know your weapon.

2116. New AM/FM/SW cassette car radios here!

Newsgroup: rec.radio.scanner
Date: 1997-10-23 00:00:00 UTC
From: Manager <don't_reply@just.call>
Message-ID: <62ortq$lpd@mtinsc03.worldnet.att.net>
Source record: 182329
Cross-posted to: rec.radio.amateur.equipment,rec.radio.scanner,rec.radio.shortwave,rec.radio.swap

Have you been looking for a really good quality short-wave car radio with stereo cassette? I was too and I'm delighted to say I finally found one. Freedom Radio has made a special purchase of the *finest* quality AM/FM/SW cassette car radios, and they have them in stock now for only $349.00. This is a special purchase and manufacturer will not permit name to be mentioned here, so call now for more details. Order now because they won't last long at this great price.

Call 1-888-778-2181 for more information

If you are looking for an extremely high quality car short-wave radio, don't pass this up or you will be sorry.

Subject: RE: DISCRIMINATOR
Date: 27 May 1997 10:47:48 GMT
From: "KB8UAS John Feist" <bugg@newreach.net>
Organization: None
Newsgroups: alt.radio.scanner

THIS INFORMATION IS FOR THOSE OF YOU WHO HAVENT SEEN rec.radio.scanner THE
AMERICAN SCANNER NEWSGROUP. IT HAS BEEN DISPLAYED HERE FOR THOSE OF YOU
WHO NEED TO TAP INTO THE BASEBAND AUDIO (DISCRIMINATOR) OF YOUR SCANNER.
iT WAS WRITTEN BY BILL CHEEK, THE AUTHOR THE FAMOUS "SCANNER MODIFICATION
HAND BOOK" SERIES. HE HAS REQUESTED THAT IT BE FREELY DISTRIBUTED BUT NOT
TO BE DISTRIBUTED BY ANY MEANS FOR MONETARY GAIN.

NFM DISCRIMINATOR CHIPS - BASEBAND AUDIO - SQUELCH GATE DATA
==

There is a growing interest in tapping the baseband audio
out of various scanners for decoding of a variety of esoteric
signals, including CTCSS, SCA, FSK, RTTY, FAX, etc. By and
large, such signals cannot be taken from TAPE REC jacks,
headphone jacks, and EXT SPEAKER jacks because of the voice-band
filtering that is done between the volume control and these
output jacks.

Therefore, it is necessary to tap the "baseband audio" directly
at the output of the discriminator chip for your scanner. Table 1
shows a list of scanners, the discriminator chip(s) used in the
scanner, circuit symbols of those chips, and three pins of general
interest on the chips: RF-Input, Scan Control, and, of course,
the baseband audio (discriminator output) pin.

Even though your scanner may not be listed below, try to find
its discriminator chip, and chances are it will be listed with
one or more scanners below, the pins of which will be the same
for your unlisted scanner! Corrections and additions to this
list are requested. See my mail and other addresses at the end
of this file.

For hookup information, see just below Table 1.

HOOKUP PROCEDURE
==========

If you need the raw Discriminator baseband audio signal for
external purposes, the best way to access it is via a jack
installed in a convenient, unobtrusive location on the scanner.

1. Install an RCA or other jack in a desired place on the
scanner's external case, typically the rear panel.

2. Connect the shell or outer frame part of the jack to scanner
chassis ground.

3. Connect the (+) leg of a 2.2-uF tantalum capacitor to the
Discriminator output Pin. (Capacitor should be tantalum,
but can vary in value from 1.0-uF to 10-uF at a voltage
rating of 25-50vdc.)

4. Connect the center conductor of a shielded coax (RG-174, etc)
or shielded mic cable to the (-) leg of the capacitor.

5. Connect the shield of the cable at this end to a nearby PCB
ground trace or spot.

6. Connect the center conductor of the other end of this cable
to the center or hot lug of the jack.

7. Connect the shield of the cable at that end to the ground lug
of the jack.

8. Fabricate or buy a shielded patch cable with one end to mate
with the new jack on the rear of the scanner at that end....and
the other end to mate with whatever jack is on the tape recorder,
processor, decoder, or whatever device is to be connected at the
other end.

"SCAN CONTROL" AND SQUELCH PIN DATA FOR
UNIDEN SCANNERS and Realistics made by Uniden
==========

Uniden does their darndest to make it difficult to hack their scanners. You guys have some work to do. Here's the deal: Even though all NFM discriminator chips have a SCAN CONTROL pin, Uniden doesn't always use it! Some Uniden scanners have a separate Squelch circuit with the SCAN CONTROL pin on the discriminator unused! You have to find the real Squelch circuit, and then determine the Logic for that circuit. It's easy, but differs from one scanner to the next, and I can't cover them all.

Yes, you can do many things to improve reception.

You can add a mobile or base antenna. You will need an adaptor, probably Motorola-BNC for mobile, or PL-259-BNC for base antennas. There is also a pre-amp that will plug inline with the existing antenna. It works somewhere in the 100Mhz-1Ghz range, and runs about $80.00. Radio Shack has all of these items. You might also want to consider ordering the $20 leather case for it, clips conveniently on your belt. It is a RSU item only, not in stock in the stores.

BTW, out of curosity, how much did you pay for it?

Ummm, just because a couple of news servers were misconfigured doesn't
mean it is a valid newsgroup.

r.r.a is *not* a valid USENET newsgroup. You may have a server on your
network which accepts messages to r.r.a, but all that means is the news
admin at the site isn't doing his/her job properly.

Tell your news admin to download a valid list of USENET newsgroups from
ftp.uu.net and fix their active file.

I'm new at this scanning game, and I have a question about what I'm hearing. I scan the local fire and police bands at night, and every once in a while instead of a voice, I'll hear a noise that sounds like Morse code only very, very fast. Can someone give me a clue as to what I'm hearing? It shows it's on the same frequencies that I have programmed in.

Thanks, George Ann

Funny, I often prefer mine to be outside of the PC. I can properly
terminate and condition my signal, and convert it to digital format, before
it enters the the computer chassis. But then I often deal with fA currents,
so I probably have different requirements. Of course, when I'm dealing with
weak radio signals in the < 1 uV range, I would like to keep the PC
generated interference to a minimum. If the WinRadio is designed for the
casual listener who's interested in listening to the BBC/etc, then this
isn't an issue.

> > And I have the luxury of dealing with low bandwidth (<100 Hz) signals,
>
> It would take a lot of harmonics of 100 Hz to get to
> bothering a radio.....

My point (since you didn't understand it) was that it is much easier to
filter out high frequency interference when your area of interest is in
that region.

> > so I can heavily and intelligently filter them. Not true with an

But we're not talking about VHF/UHF scanners here, we're talking about an HF communications receiver. Unless you're saying that the WinRadio is only as good as a $199 scanner?

> > >This old wive's tale goes way back to the days when

> on your terminologies and refresh. Maybe defrag the ol'
> gourd. 'Er, do you still refer to "megahertz" as
> "megacycles"? Anyway, "baud" doesn't apply........

Funny, as I recall, a "baud" is bit transition per second. So it is quite correct to refer to 38,400 bits per second as 38,400 baud when dealing with RS232 signals, as each data bit requires one bit transition. We're not dealing with 1200+ "baud/bps" modems here, where the data rate exceeds the transition rate, due to the use of phase shifting also.

> > In fact, I regularly did 38400 on an XT)
>
> Bits per second, yes. Not "baud".

No, baud is acceptable. See above. You really have to keep up to date on *your* terminologies and refresh a little...

BTW, nice try to throw a little confusion in there to shift everything off topic.

> So what? I had an XT with a serial port that ran at
> 115-kbps DCE. Big deal. It's the DTE that counts. You
> never got 38.4-kbps DTE out of an XT....

I sure did. But it doesn't bother me if you don't believe that it's possible.

Does the WinRadio transmit raw sound to the PC over the serial port? Does it demodulate the data? Is this sent over the serial line? Again I ask, why does the WinRadio have to transfer huge amounts of data?

> > I'll whip up a Mac interface in a week. Give me the protocol (so I don't

> > would love to offer Mac support as well.
>
> Now you've said it all. Allow me to rest your case.

What is my case? I simply mentioned that because Icom uses a serial interface, it's possible to easily port it over to other computing platforms. No hardware modifications are necessary.

> <giggling, sniggling, & tittering>
>
> Been a pleasure, man. It's always nice when a McDuck

Although this is not a scanner question, I thought this would be the best place to ask this question.

I have a 900 Mhz Uniden EXP9200 cordless phone. If anyone has any experience with these, I need help. Are there any after market battery packs that are better than the factory battery packs. I have gone through three packs, and they suck!

If anyone has found a worthy replacement, please let me know.

Thanks

There were many discussions about the security of the (no longer)
secret A5 algorithm in GSM.

I want to evaluate the quality of the secret encryption algorithms
in DECT (Digital European Cordless Telephone Standard) and TETRAPOL
(digital standard of MATRA/AEG used by parts of the french police).
The fact that these algorithms are secret suggest the lack of crypto-
graphic security.

Has anybody here informations or source code for

- DSAA, DECT standard authentication algorithm,
ETSI-standard ETS 300175-7 Annex H

- DSC, DECT standard cipher, ETSI-standard ETS 300175-7 Annex I

- TETRAPOL Specification Part 16 Security, PAS 0001-16-1 (V1.0.3 RESTRICTED)

please post! Any clues are appreciated.

Thanks a lot
Dect Tester

My #1 toy this Christmas was supposed to be a scanner. However, after spending a full week of reading postings here and chatting with personnel, I=92m getting stuck with lots of unanswered questions:

The most important consideration is to get a unit that is capable of being programmed to receive local emergency transmissions (POLICE FIRE and WEATHER), wherever I happen to be located. But I also have to be realistic and consider quality, price and state of the art features! =

I=92m less certain about the importance of having 100 or more channels, 800 (or higher) Mhz, or have continuous band Turbo scanning. =

At this point, if you have any advice on any of these points or on any of the following 5 models, I would definitely like to hear from you!!!

Thanks!
Howard =

* * * * =

=

Uniden Bearcat 350A - 50 channels, 11 bands, mobile/base, LCD display. $120

Uniden Bearcat 178XLT - 100 channels, 11 bands, LCD, memory backup, Turbo scan. $140

Uniden Bearcat 120XLT (Handheld) - 100 channels, 11 bands, LCD, rechargeable NiCd pack. $170

Uniden Bearcat 700A - 50 channels, 12 bands (incl. 800 Mhz). =

$180

Uniden Bearcat BC860XLT - 100 channels, 12 bands (incl. 800 Mhz). Turbo search, LCD. $200.

Yes that's an easy one.
At night, the tropospheric layer is reduced, allowing sporadic transmissions to eminate from farther distances than in the daytime.
These beeps or "influx" as they are called, are produced by repeater towers usually beyond the horizon (line of sight).
Some can come from as far away as Topeka, Kansas because the flat plains run uninterrupted for many many miles.

Occasionally a diligent scannist can pick up a spurious signal which has not been encoded in the FM mode. These "bare" signals come in completely free of amplitude modulation, and can carry some very interesting information!

For instance a 25 db signal broadcast at 101 Mhz can skip over several sattelites and producing the "haunting" sound with which we are all familiar.
These signals, although rare, have been proven to sometimes eminate from deep space. Though rare - it is possible to underdemodulate intermodulated signals which can be interpreted with the proper disencoding devices (perfectly legal).

I pick up these signals all the time while riding on my "little train set" in my living room.

Hope this helps :)

->
-> What is the point of "ham radio"?
-> Is it more than a bunch of old geeks who haven't heard of cell
-> phones?

Well, despite being an obvious troll, I'll educate you on several (obvious) points that you're apparently too dense to recognize on your own.

A) No 'per minute' charge.

B) No need to know someone's phone number.

C) No need to be in 'cell range'.

D) A test JUST hard enough to keep out people like you.

And now back to our regular off-topic posts and flamefests.

Well I just bought one, so I can fill you in one the info:

Overall, this is one hell of a scanner. It has built-in trunking capability (which you probably knew), built in CTCSS capability, serial(? - more on this in a minute) port for remote PC control, automatic search and store,weather search and alert(!),triple conversion(so no more cellular images, if that matters to you), and military air in addition to the normal bands, all in a roomy 300 channels.

I do have a couple of gripes, however. First and foremost is the serial port. I was picturing a nice 9-pin serial jobbie that connected to your PC via a laplink or null modem cable. "BZZZT! Thank you for playing...." It looks nothing like any serial port I have ever seen (and I've seen plenty). Furthermore the special cable to connect it to a PC is $30 bucks! Ouch! After spending $350 on the unit, I didn't like the idea of spending $30 more. Complaint # 1.

The other gripe I have is the price of their special software (admittedly this strongly resembles complaint # 1). They want - sit down, if you're not already- $59.95 for the program! Judging by the fact that they didn't bundle a shareware sample and looking at the screen shot they show, it doesn't look that great. I will probably D/L RadioManager instead to use on it until I write my own (I'm a sick puppy like that). If you want their special trunking database get ready to spend another $70 (which I can and have duplicated with one Access query from my $40 Spectrum CD). Factor in complaint #1 and $5.95 for shipping and handling, and you've spent $165.80! (And since you live in CT you can tack on 6% sales tax, too!) Enough is enough already, folks - I've got bills to pay! Complaint # 2.

Complaint # 3 applies to the whole trunk tracker line, although it's fairly insignifigant. 30 channels per bank is, in my area anyway, wasted space.

All the public safety trunked systems I monitor fit in 15 channels or less. In a scanner that supports logical channels, why not have logical banks? I know, bitch, bitch, bitch, but it is an intriguing idea.

As I said, overall this scanner kicks butt and takes names. I would consider it the best base station for the money, hands down. I am quite happy with the scanner itself, but Uniden and Scanner Master (the maker of the software and cable) could've done better with the accessories.

You don't have a clue what you're talking about. Teflon coating has absolutely no bearing on a bullet's ability to penetrate ballistic armor. It was used on some early KTP bullets in order to keep them from glancing off inclined glass surfaces (like windshields). These bullets are no longer made and were never sold to the public. Probably no more than one or two thousand were ever made. Any rifle bullet larger than a .22 will penetrate almost any ballistic armor on the market. Some armor will stop 7.62X39 (AK) rounds (which are slow and low-powered) but most will not even do that. 00 buckshot or deer slugs from a shotgun will cut through front and back armor and whoever's between them like a hot knife through butter.

You must have been in the *vicinity* of the sting operation and
visible to the police involved. a *VERY* *VERY* *STUPID* thing to
do.

>After 2 weeks of motions by my lawyer, my radio was returned - broken.
>They said that that's the way it was when the took it away.
>Why did they take it if it was broken?

They probably saw an *IDIOT* (YOU) walking around the sting area (or
parked nearby in your car) with a scanner and latched onto it, I doubt
they spent the time to verify the functionality of the unit.

>I need to buy a new radio. Any Ideas?

Yes!!!!! buy a portable CD player or an AM/FM radio and stay away from
scanners.

> I want to monitor sting operations.

Lots of people probably do from their *HOMES* without compromising the
"sting" operation or waltzing around in the area with a scanner
blaring all of the police communications. It's because of a few
BOZOS like you that we get *MORE* restrictive legislation all of the
time.

Yes there's no doubt that a Spectrum Analyzer is a big boon. Now figure out how to tag it onto a receiver that actually works worth a damn and I might even get impressed.

Mmm - you wanna talk about bogus names and misrepresentatins Bill? If you're going to pretend to be a compay rep for a product - be willing to stand up for it. Take a look at the
heat RS is taking around here - even you have to admit, you trolled for it. 'Sides - you wanna email me, if you can't figgure it out from the Reply-To: address - you could have asked. It's not that hard.

> You hung
> the RFI issue up there as if it were fact and cosmic truth.
> It isn't. But I didn't want to get personal and call you a
> liar or insinuate that you didn't know what you were talking
> about. So instead I relayed my experiences which are true.

Just like I relayed my experiences which are just as true. And there's still no reply to the
one user who has a WiNRADiO and DID have problems. I'd say his experiences are just as close
the cosmic truth as your lack of problems. You have to admit - that placing a wideband reciever in one of the more EM intensive environments in the average household (short of a microwave oven) does beg the question. Especially when others who have this radio say they're having problems.

> I plugged it into the ISA slot; did the simple setup;

> speaker into the speaker jack....and went to town. No
> problemo. WiNRADiO is exceptionally well shielded and the
> signal lines in and out are well filtered. The computer
> contributes less RFI than the monitor.

You mean the Winradio picks up less RFI then an external scanner may from a monitor. That EM
energy is still in there as evidenced by an "exceptionally well shielded and signal lines in
and out are well filtered" - still dosen't answer the one user who had problems. Glad it works for you though - what are the assurances this is the usual experience?

> You have to remember, I am NOT the company and I do not
> speak for the company and I did not manufacture, invent or

> even contribute to the invention of WiNRADiO.

They why pretend to be them?

> > CLARIFICATION. You've made several comments about how "8Mhz" is better than "115k"
>
> Well? Isn't it?

It's different - it's faster, is it better? Is building a reciever with heavy shielding and line filtering worth the speed increase? Guess we'll see. You say it is - anyone else?

> Besides, external devices do not communicate via the serial port at 115-kbps with one
> exception being LapLink and related technologies, and when you use those, your computer
> comes to a virtual standstill until that serial connection is relinquished.

Mmm, wonder if Zoom, USR and Hayes would like to learn this. Since you didn't invent, engineer or contribute to this product.... Ah heck with it - the questin was directed at someone I thaught had contributed to the design - never mind.

> How do you make a bus device external? I don't understand.

I'm obviously not talking about making a bus device external. I'm talking about running a reciever externally via a serial port - if you need that much data transfer (computing power?) that a serial port would bog down the PC's CPU - then maybe an interface card internal and an external radio would be an idea. May get the engineers away from all that shielding and filtering (well, some of it maybe) that seems to work for some and not others.

> If you want an external computer controlled radio, you can

> there is vastly more computing power available than at the
> serial port.

Mmm - that almost sounded informative. Ok - it sorta was! Now - what else does this thing do
that's not 'twist knobs and the usual stuff'?

> Well, in one breath you were coming off as a pro who knew
> more of these things than me. Maybe you do, but I expect
> you to show it, if you do....with truth and correct
> terminologies.

And in 'one breath' you came off as a representative of WiNRADiO and not simply a happy user
that also sells them. I aksed questions to who I thaught was someone involved with this product and recieved some interesting coments on names and liturature. I'd be very interested to see a real engineer discuss this product with someone who actually represents it.

> > you know, one of the types that

> buildings? I don't know. External devices are fine for
> certain applications. Internals take up where externals
> leave off in terms of power, data rates, and leaving the
> computer free to multitask and multithread.

Ok - so this thing is internal so you can play Quake while you're scanning? Is that the bottom line? Really though - besides the specral scope deal - what else? You and the WiNRADiO site both say that with two radios the specral display can be real-time updated. If
this ISA power house is so strong - why two radios? You still haven't explained why installing it on the bus is so critical. I think we've finaly distilled this down to a couple points:

The inside of a PC is noisey
WiNRADiO is inside a PC - so it's shielded and filtered so as to be useable (and seems to not be for some)
Is it worth it? Is this why it costs what it does?

Implied function and features indicate it may be - what are they? Are they and their dependance on a bus connect to a PC worth the RFI problems?

> As it is, I have explained the above several times now. Fast data is
> not always the goal. But WiNRADiO is capable of a LOT of
> things, including spectral viewing and all those actions
> would bring the CPU to a standstill from the serial port.
> From the ISA bus, it's barely a ticker on the graph.

THANK YOU! Finally an answer that almost justified the apparent added expense and frustration of installing a wide band reciever inside an EM rich envirionment! But - if all we're looking at is sending a 'snap shot' of the spectrum to a graphic display and the a computer conroled scanner after that - still makes me wonder why stick it inside a PC. Even something like the ICOM should be able to send such a 'snap shot' via serial - ok, so it may
bog down the CPU for a bit - how long is a bit?

> I don't do "PR" on the newsgroups.

Excuse me? You want to go back and read the first post in this thread? If that isn't PR...

> PR is usually a pack of lies and bullshit, designed to enable someone to reach into
> your wallet.

Case in point. You come off as a PR spewer and you're suprised at the reaction?

> I'm not here to sell WiNRADiOs. I'm just here. I've been
> here for a long time. And I will continue to be here for a
> longer time. I have decided to sell WiNRADiOs because I

Again - you can say that after that first post? You may not have 'sold your soul' but it sure looks like you gave up your name.

> If I have lost credibility with you, that's fine, but like I
> said, from your FIRST post there wasn't any and therefore
> none to lose in the first place. You came on with the
> assertions and inaccuracies from the git-go. Talk about
> "credibility", geez, dude, you don't have the common decency
> to identify yourself, and worse, you use bogus "From" and
> "Reply-To" addresses:
>
> From:<Yea.right.spam.bot@cyberhighway.net>
> Reply-To: 127TateB721@cyberhighway.net

That From line should explain why the addresses are camoflauged and as for the reply-To: address - Bill, you really can't be that dense. It's almost as obvious as NOSPAM.COM. MANY others have figgured it out, even without a tag line helper. And it sure does keep the spambots at bay.

> For whatever it is worth.....I *am* "Bill Cheek", ya big dummy!

Huh? What? NO!!!

Sheesh

> Now lighten up. <grin>

Now that I KNOW I'm talking to the Cheek man and not a WiNRADiO company official - you bet. So light, you won't even notice me.

Too bad really, you almost made your case. Very close to making it. I AM interested in this radio - sounds like a great idea! Still not sold on the idea of it needing to be inside a PC
though.

For the relief of the rest of this NG - that's 'nuff from me on THIS subject.

>gourd. 'Er, do you still refer to "megahertz" as
>"megacycles"? Anyway, "baud" doesn't apply........
> [...]

"Baud" refers to the number of transitions per second the signal might experience. Each transition may encode more than one bit, (e.g., each transition may encode one, two, four, or more bits). People often say "baud" when they mean "bits per second," probably because it is a bit easier to say.

Note that the concept of "baud" is more relevant today than in the days of 300-2400 bps modems because the difference between baud and bps is increasing. I am not a EE, but I believe that most of the advances in modem speeds rely heavily upon encoding more bits per baud.

And, yes, the etymology of "baud" is "Baudot", as in "Jean Maurice Emile Baudot", the French engineer, not the five-level code.

Sorry for confusing the issues with the facts...

Bluntly, it is a piece of crap. Why do you think, after all that research and development expense, do you think they pulled it off the market in less than nine months?

Now, the radio they replaced it with, the 9000XLT, is a gem. I've had one for a couple of years and wouldn't be without it.

In the US of A, the FCC has pre-empted laws covering amateur gear that
covers public service freqs, *NOT SCANNERS*.

> #02 if you do not hild a amature radio lice then you must check
> your local and state laws as they tend to change from state
> to state

Pretty good, here.
>
> #03 in florida scanners are allowed with the exception of for mobil
> use however the law states that if you have a valid amature
> lice this law dose not apply

Close. Florida law forbids the use of scanners that are "installed" in
vehicles. Simply going mobile with your (for example) PRO-43 is
completely legal, unless you use the vehicle's power, an antenna fastened
tot he vehicle, or fasten the scanner to the vehicle (that last one is a
little tricky - does that mean stood up in a cup holder?).

I'm with you...this whole thread is a bit much. The bloody radio works
well, is chuck full of features and just sits here doing its' thing
while I type this. It's not noisy at all, I use a vertical antenna
placed well above me on the roof ('bout 25'). They've done a great job
on the software front end, it's a beeter scanner than my scanner(s) just
because it's so handy. The shortwave reception is more than adequate as
I'm NOT a DX'er, I'm a listener and it allows me to keep a list of the
stations I listen too in sequence. It works, and works well.

What version of the OPTO board is installed?
(I understand there are minor differences between revisions?)

I have an almost perfect 2006 (one of the flip-up legs is missing) with
box and manual. I just started playing with a few software packages
that let me take output from the discriminator (thanks to Joe Cardani)
and pipe it through the soundard to decode DTMF, FAX, POCSAG, SSTV, and
etc.
I'm definately hooked :) I was looking at purchasing a new OPTO
in the future, but the new cards apparently will not address the
cell. freqs. No great loss, but since the radio can receive them
it irrates me to know they're locked out from the computer interface.

Anyway, please let me know about the board version.

I would guess this thread has run it course by now,
and so I will discontinue my participation in it from
this point on. It was a nice experiment to see how many
names I would be called; how many attacks would be mounted;
and which flavor of a "crusade" would emerge. It was a very
interesting experiment, to say the least. I enjoyed it; the
good, the bad, and the ugly.

But anyway, I will start a new thread for those who want to
discuss the technology, features, benefits, and warts of
WiNRADiO. It has a solid place in radio and offers a lot
technology that's been missing until now.

I can't make up my mind whether you are just a typical newsgroup hatemonger, or an ICOM or AOR rep, or whether what you said is a true story.

I have had Winradio for some time and also had some dealings with the company (I contacted them for help with some custom software development I am doing for the Winradio). I always found them very prompt and courteous to deal with. I doubt that they would act the way you said they did. Why don't you let everyone know your full name and email address. Why don't you post the company's email response here. If you are really that unhappy with the product (I'd really like to know why), I for one would personally help to put pressure on the company to give you your money back. (I might even buy the unit from you - with a discount! I was thinking about getting a second one to get real-time Visitune.)

I have a Radio Shack PRO 2042 scanner for sale. The unit is in MINT
shape with very little use on it. It has the box, manual, and antenna
with it. I just have to many rigs and this one is not used. I would
like to get $325.00 plus shipping for the unit. Thanks, Jim.

Well, they did. I can say I doubt you got good service from them as well based on my experience. For all I know, you are another Winradio salesdroid. Either way, congratulations on being happy with your purchase.

>Why don't you let everyone know your full name and email address.

If that isn't the dumbest thing I've ever heard! Because I don't want to get junk mail all day long. I also don't feel like continuing these conversations outside of news. I'll decide when to read newsgroups and when to write to them. My mailbox is spam-free and will stay that way.

>Why don't you post the company's email response here.

Because I didn't e-mail them. Can't post what I don't have. You are beginning to annoy me. If you want to pick me to pieces, at least pay attention long enough to remember what you read 5 minutes ago.

>If you are really that unhappy with the product (I'd really like to
>know why),

Yes I am unhappy with it and I already said why. Scroll down to read my other post (for the 1st time, apparently).

>I for one would personally help to put pressure on the
>company to give you your money back. (I might even buy the unit from
>you - with a discount! I was thinking about getting a second one to

Where were you 2 months ago? I would have given it to you for the same price my friend paid if you asked first. $50.

I think the product would be adequate for someone who is just getting into scanning. If you are interested in any sensitivity at all, it's a piece of junk. Hardware wise, it's a $50 scanner. That's because it's half-assed adapted to work in a lousy RF environment and doesn't handle it all that well. The software, on the other hand, is quite nice and full of cool features. But it still doesn't help when you aren't getting a good signal......

Not all scanners have this band coverage.... I know the Pro-60 from Rat
Shack covers it, and while I'd never buy a scanner only for FM radio, it
is a nice feature that adds to the appeal of an already nice scanner.

Because everyone needs to tell time, most people desire to use a
computer, and nearly everyone is expected to be able to drive a car.

Not everyone wants to be a ham operator. If it were a necessity,
it wouldn't be ham radio.

Message-ID: <877635792.11276@dejanews.com>
Source record: 182400

PLEASE HELP! My AR1000xlt is not scanning. Everything works, but the problem is the speaker only picks up static on freq's that I know there should be something on. The SCAN button also doesn't work correctly, it only will move up one channel each time I press it. Right now, the scanner picks up nothing but static. If anyone has ANY ideas please E-Mail me or post a message here, I'd really appreciate it. THANKS! Patrick

Huh? (Sorry to seem to be picking on this one point.) What Radio and what Interface were/are you getting 38.4K with? With the exception of a couple "Black Project" boxes that I worked upon earlier this year that ran at the whopping speed of 14.4K everything I've had *my* hands upon has been running at 9.6K. Now if you are talking about `data' communications between computers... 115.5K is doable for limited distances and LANs are getting up there even further. But, for the control of radios/receivers, the WinRadio has probably got the `record' when it comes to *consumer* devices.

Even at it's `list' price it's one of the best deals around for the *serious* scannist. (Even better deal for those communites that need a record for frequency coordination/usage since the total cost of one is considerably less than that of a spectrum analyzer, assorted `recording receivers, and a lot of other `goodies' needed as `support' along with the wages that have to be paid.) Admittedly it *is* a `niche' product but, it does fill that `niche' a lot better than some of the stopgap methods that have been bandied about here.

>
> Mark

The "statistic" is NOT meaningless ... since "Morse is necessary
because it is the most universal mode." argument is one that is
raised by pro-coders so frequently ...

Being able to wave the ARRL's own statistic in their face to show that a large
majority of hams really don't USE Morse (but some till want to use it to keep
others out of "their" bands) illustrates the bogus nature of that argument
in one more way.)

Glen is correct though if he's trying to imply that "preference" and
"popularity" should NOT be and are not valid "reasons" for "justifying"
a pass/fail Morse test which blocks entry to totally unrelated HF privileges.

That's a real stretch. By that criterion, nothing is off-topic.

Postings about government actions affecting radio communications are
relevant to this newsgroup. Postings about gun control, religion,
antique cars, bicycles, Barbie dolls, Mickey Mouse Club, etc. are
off-topic if they have no radio content. People like David084 Abrams
exhibit their stupidity and immaturity when they deliberately post long
and irrelevant verbal rubbish just because it makes them feel good(mental
masturbation, which really should not be done in public).

I don't believe he's a dumb-ass.

If I owned a company that makes digital radio's ...
I'd sell them to the government and about 2 years later, I'd produce a
scanner that would pick up these digital signals.
And then in another 2 years I'd sell the govt. new and improved
digital encryptions.
And in 2 years I'd make a new and improved digital scanner.

Get my drift??

Be careful using a scanner in a casino. They may see you with it, and ask you to leave. It may ruin a perfectly good evening of action.

> sigh..... I hope I can get some converters or something...

You're not listening to what people are trying to tell you. Let me try ----

It is not a simple matter of procuring a "converter" which are typically (in an RF sense) straightforward local oscillator(s), mixer(s) and filter(s) to shift the incoming signal's frequency into your existing receiver's input frequency range. That alone will not allow you to listen to the transmitted signal.

The Clearnet system sounds like it is fundamentally different than a traditional analog (i.e., AM/FM/SSB/etc.) receiver with its envelope/product/ratio/discriminator/whatever demodulation of the IF 'directly' into baseband audio. Instead it seems like it is a *digital* system, using digitized samples of audio transmitted with a CDMA 'spreading' scheme. Two different animals entirely....any 'converter' would (at best) demodulate the incoming CDMA signals into audio only to remodulate it onto an FM (for example) carrier at 150 MHz for your existing receiver to knock back down to 10.7 MHz, 455 kHz. etc. before passing it through the FM detector and into the speaker. Rather a roundabout way to go, even if it were available 'off the shelf'.

Take a deep breath, and think about this stuff. It all makes sense if you understand the principles behind it.

> Get my drift??

Nice idea. However, since you ARE dealing with the government,
you're dealing with a body who could basically make it illegal for you to
make those scanners.

Failing that, the cycle might work for only a few years. By
then, your customers may catch on, and those people buying radio systems
may not want to exhaust millions of dollars every year for a new system.
Some local governments are (thankfully) not going digital for a long time
because they've pooled all their money on trunking, which was "the latest
thing" at the time.

Don't feel bad... I am with you on the IE 4.0 !! Had to strip 95 and reinstall the whole mess..... Not a hell of a big job, having done it many times since I've started with 95, but a bug somewhere must be swatted !! I do like 4.0 , but it is a memory pig !!! Had 427 meg on drive before install..... Did install and ran for a few hours... looked at the drive for some other reason and found 4.0 .... yes only 4 meg left !!!

A real memory pig.. 400 meg !!

WiNRADiO Spectrum Analyzer with VisiTune
==

Know how professional spectrum analyzers cost anywhere
from $10,000 on up to $60,000? And how hobbyist versions
from ICOM, etc, can cost an arm and a leg? Well, hold on
to your socks.....

Little may have anyone known, but a great spectrum analyzer
(albeit inexpensive) has been on the market for quite a while
now in the form of WINRADIO!

Yes, that's right, WinRadio has spectral display capability!

Now available is Version 2.12 of the standard control program
for WinRadio, that contains an RF SPECTRUM SCOPE with some
pretty awesome capabilities.....free upgrade, too!

For more information, including download of the upgrade software:

http://www.winradio.net.au (Australia)
http://www.winradio.com/home/download.htm (USA)

E-Mail: info@winradio.net.au (Australia)
E-Mail: winradio@san.rr.com (USA)

And now, a brief overview of the RF SPECTRUM SCOPE capabilities
in Version 2.12 of the WinRadio control software:

Version 2.12 contains some basic refinements of the main control
program and one whopper of a new feature to make the competition
eat their hearts out: an RF Spectrum Scope, basically a spectrum
analyzer feature previously found only on very expensive radios,
or as an expensive add-on! Zowie! It's too cool for words!

One of the slickest things about the new RF Spectrum Scope is the
ability to position the cursor on a "blip" and instantly, WinRadio
tunes to that frequency! Bzzzaaaap! That quick!

Imagine dragging your mouse across a scanned spectrum; click on a
peak and you are tuned - the Spectrum Scope takes care of that.

Then hold the right mouse button down and keep dragging the frequency
cursor - and that's the real Visitune trick: The receiver will tune
continuously, smoothly following your hand movements.

The scanned frequency spectrum will be visible in the backround, and you will hear the signals corresponding to the peaks on the spectrum, as you move past.

You can also select the "manual refresh" option, and the spectrum will update behind your cursor.

And if you were wondering why it was made possible to control more than one WiNRADiO with one PC, (up to eight!!) here is one of the reasons: If you install a second receiver, then you will be able to see the backround frequency spectrum updating continuously in real time, while you are exploring the frequencies with your second receiver!

Visitune has brought about a major shift in the way we tune a receiver. Instead of the old tuning knob and dial, we will increasingly be seeing a spectrum analyzer at the centre of a virtual control panel of a PC-based receiver.

Tuning a communications receiver will never be the same again!

Two simple points to remember when using the WiNRADiO Spectrum Scope:

* Click the left mouse button to tune.
* Hold down and drag to Visitune!

The RF Spectrum Scope has twelve selectable spectrum scan steps as follows: 1, 2, 2.5, 5, 9, 10, 12.5, 20, 25, 30, 50, and 100 kHz; two Resolution Bandwidths: 6 & 17 kHz; and a slew of setup and control options, including single and continuous sweeps; Max/Min/Previous/Current sweeps in different colors (especially slick for identifying 2-way systems that key and unkey all the time, in contrast to broadcast and continuous carrier signals that are always present.) WinRadio can be muted or unmuted during sweeps.

Sweeps can be set by either of two criteria: start-stop (lower-upper limits), or center freq and bandwidth. Wicked!

Utterly delightful is the ability to save the spectrum screen to a very small file and subsequently to reuse it as an active display, or later configure it as a photograph of a sweep. Hundreds of sweeps can be saved in a very small amount of disk space. A test sweep of the 88-108 MHz FM Broadcast Band required all of 1250-bytes.

The RF Spectrum Scope, has a Zoom-In / Zoom-Out feature to make the spectral display appear as detailed or not as you choose. V2.12 upgrades the main control program in a number of subtle ways, including an S-Meter that shows numeric values of 0-100 as well as the original bargraph display. The RF Spectrum Scope shows the relative S-meter numbers, too! (A new scanning Squelch was added to the main program, too.)

Spectrum sweeps can be set to pretty much any desired limits, though the narrower, the more efficient, of course. I'm not sure what the sweep speed is, but it would be measured in steps

per second, and therefore is probably sync'd to the Scan/Search
rate for the main radio at 50 per second. Given the twelve
sweep steps mentioned above, it is possible to sweep 20-MHz
of spectrum in a few seconds.

Source record: 182220

Does anybody know about the new frequency allocation called
"Family Radio Service" (FRS) ??

Radio Shack advertises a few hand-held radios that operate on this
band, but give only a few details.

They do state that 500mw is the maximum power
They state that there are 14 channels in this band.
They state that "channel 1" is at 462.5625 Mhz.

What they don't state, and what I want to know is:
What are the frequncies for ALL the channels,
or if you can tell me what the channel spacing is, I
can figure it out.

Thanks.

>Any suggestions or advice welcome.

I'd skip the frequency counter for finding "transmitting sources" ,
frequency counters are basically designed for troubleshooting
electroninc equipment. They're used to determine the frequency of
oscillators etc. in various electronic equipment. A freq counter is
usually connected to or closely coupled with the device that you want
to know the frequency of, simply connecting an antenna to a freq
counter will just (usually) show you random energy/noise. Your scanner
is the *BEST* tool for determining what the active frequencies are,
you can just scan from the low end to the high end on any particular
band(s) and the scanner will stop on every "transmitting source" that
has sufficient strength to break the squelch.

Most likely it's their call sign in morse code. FCC requires station
identification. Morse code is acceptable so it's automatically sent to
cover FCC requirements.

Marty:

Take your old pack to a hobby store. They can replicate your existing pack EXACTLY for probably half as much as buying a replacement pack from a scanner outlet. Not to mention they can use higher capacity nicads or nickel metal hydrides...whichever you prefer.

Happy Scanning....

What makes TrunkTracker scanning receivers special is that it provides the ability to monitor "trunked" radio systems. These systems were previously extremely difficult to monitor. Trunked systems, in layman's terms, frequency hop. A conversation between two deputy fire chiefs may occur on one frequency and then suddenly, during a pause in the transmission, the conversation will jump to an entirely different radio frequency. In the meantime, two sewer workers, in the same city or county as the fire chiefs, may suddenly occupy the first frequency. Thus, it becomes almost impossible to follow a complete train of thought.

Try looking up http://www.trunktracker.com for more info.

Happy Scanning....

Howard,

I seems you have set a price limit of $200.00. There are two great scanners available now for around $250.00.

1. PRO-26 - Wide coverage (25Mhz-1300Mhz Less Cellular). This scanner is great for Air Shows, auto races, etc. Picks up about everything. 200 Channels.

2. TrunkTracker - Follows Motorola trunking systems. This is a must for my area. City police, sheriff's department, state police, and local chemical companies all use these systems. Does not cover military air and a few other things. Also works as a conventional scanner. 300 Channels. 29-54Mhz, 108-174Mhz, 406-512Mhz, 806-956Mhz

The scanner you decide on depends on your area and what you want to listen to. Rich Wells has a web site with reviews of many scanners including those mentioned:

Howard R Kight wrote in message <34502B1B.44C4@acsu.buffalo.edu>...
My #1 toy this Christmas was supposed to be a scanner. However,
after spending a full week of reading postings here and chatting with
personnel, I'm getting stuck with lots of unanswered questions:

The most important consideration is to get a unit that is capable of being programmed to receive local emergency transmissions (POLICE FIRE and WEATHER), wherever I happen to be located. But I also have to be realistic and consider quality, price and state of the art features!

I'm less certain about the importance of having 100 or more
channels, 800 (or higher) Mhz, or have continuous band Turbo scanning.

At this point, if you have any advice on any of these points or on any of the following 5 models, I would definitely like to hear from you!!!

Thanks!
Howard
* * * *

Uniden Bearcat 350A - 50 channels, 11 bands, mobile/base, LCD display. $120

Uniden Bearcat 178XLT - 100 channels, 11 bands, LCD, memory backup, Turbo scan. $140

Uniden Bearcat 120XLT (Handheld) - 100 channels, 11 bands, LCD, rechargeable NiCd pack. $170

Uniden Bearcat 700A - 50 channels, 12 bands (incl. 800 Mhz). $180

Uniden Bearcat BC860XLT - 100 channels, 12 bands (incl. 800 Mhz). Turbo search, LCD. $200.

It probably is Morse Code you are hearing. Many radio systems use a
Morse Code identifier to automatically give their FCC callsign.

> it is a useless box really.

The R10 is a nice little radio. Has its own set of quirks...one of
which includes only scanning at about 6 chan/sec. For more details,
go to my home page below. Click on the radio monitoring link.
Near the middle of the page is a table of my receivers. Find the
R10 and the rest should follow.

I own a 2037 and it is a decent radio but has poor filtering. Makes
it VERY sensitive but therefore very prone to being overloaded by
strong signals which causes intermod. Does have its use if you
live outside a heavy RF urban/suburban locale. The R10 is nowhere
near as sensitive but gives much better protection from this sort
of overload which sounds to be a problem where you monitor.

Used prices for the R10 are in the $425-$450US range. Restoration
of the cellular band is accomplished via micro-surgery of some
surface mount resistors. Not for the faint of heart who don't have
the proper tools and experience. Best left alone.

Good luck!

Strong signals,

Hi. I would like to know the freqs of Motorola's "Clearnet" devices.

We are using Motorola's rigs for the school activity, and I am interested in knowing the operating freqs.

Last time when I had that rig in handy, I tried to check the freqs by using the freqs counter... but it didn't pick up any signals. The freqs counter was supposed to pick up anything between 1 - 1300 MHz... so I was thinking that the clearnet might be using the microwave band...

The rig looks like a cellular phone. The antenna is also similar to those of the cells.

Thanks for your help !!!!!!!!!!!!!!

2230. Service manual ban

Newsgroup: rec.radio.scanner
Date: 1997-10-24 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19971024135501.JAA21292@ladder01.news.aol.com>
Source record: 182281

All,
After several weeks of digging, I have uncovered the following information regarding the decision by RadioShack to stop selling service manuals and other scanner technical information to the general public. The following is my own opinion, and does not reflect the position of any business or publication with which I am affiliated.

In a move that has angered radio hobbyists nationwide, Tandy Corp. (dba nationwide as RadioShack) has stopped selling service manuals and schematics for scanners to the general public, citing a request from the Federal Communications Commission.
Customers attempting to order service manuals and schematics from Radio Shack were either told by the sales clerk that the material was "restricted," or if
they tried to mail order the information, they received the following message: "The FCC has requested that all vendors and scanner manufacturers not release schematics for scanner products that are offered. Radio Shack is complying with this request. We regret we are unable to assist you with your request. Thank you, TANDY PRODUCT SUPPORT CENTER."
This move is apparently an outgrowth of a new Uniden of America policy to submit all scanner certification applications to the FCC under various rules of confidentiality. Uniden, which builds and sells the Bearcat line of scanners under
the Uniden name, also manufactures many of the scanners sold at RadioShack stores.
Jim Haynes, Uniden's vice-president for engineering and legislative affairs, said
the FCC "suggested" in early 1997 that Uniden submit its scanner certification applications under confidentiality rules so that "hackers" would no longer be able
to obtain copies of the schematics and details of the operating software from FCC files.
The FCC hopes to slow down the illegal modification of scanners - primarily to
receive cellular telephone calls - by keeping schematics, block diagrams and details of the operating software secret, Haynes said.
The thing is, the FCC denies it made such a suggestion.
Julius Knapp, chief of the FCC's Policies and Plans Division of the Office of
Engineering & Technology, confirmed that Uniden has filed a petition with the FCC asking that all of its future scanner certification applications be treated with
confidentiality - a request that is routinely granted - but Knapp said the FCC had

not suggested such a move.
So far, neither Uniden or Tandy have produced a copy of any written request from the FCC, nor will they say who at the FCC made the alleged request or suggestion.
Larry Van Horn of Monitoring Times has confirmed from two sources that the suggestion did come from the manufacturers - not the FCC - following congressional hearings earlier this year.
The FCC has been under great pressure from Congress to crack down on the scanner industry to help safeguard the privacy of cellphone and PCS users. Maneuvering to restrict the flow of technical information to the scanning public
could be seen by some as a step in the right direction.
It's also possible this is a preparatory step to enforcing H.R. 2369, should it
become law. Briefly, H.R. 2369 will require the FCC to deny certification to scanners unless the frequencies used by Commercial Mobile Radio Service licensees are blocked, much like cellular frequencies are blocked in new scanners today. The CMRS includes hundreds of frequencies, scattered across the radio spectrum. Restrictions on service manuals and other technical information could be an attempt to prevent hobbyists from unlocking the prohibited CMRS frequencies in future scanners.

> you are exploring the frequencies with your second receiver!
>

Am I reading this correctly? Does this paragraph tell me that the WiNRADiO provides "real time" scope abilities. Lets pretend I wanted to scope the freq. range from 850 to 865. Lets also assume that I only want to "watch" for activity and that I don't care about listening for now. Can I watch in real time or is there a delay while the radio scans the band then draws the screen?

Thanks for your time,

junglejim@delta.com

This is an attempt to start a healthy, wholesome thread on
various and sundry technical aspects of WiNRADiO. Following
is the first of what I hope will be a beneficial series.

WINRADIO MODIFICATIONS
======================

Yes, WiNRADiO can be modified. After all, it is a radio, and
no radio ever fresh out of a factory is as good as it could be.
WiNRADiO is no exception.

I have prepared a series of five articles for my "Experimenter's
WorkShop" column in Monitoring Times, starting in the Oct-97
issue and ending in the Jan-98 issue. The series also appears
in the monthly WORLD SCANNER REPORT scanner modification
newsletter in approximately the same time frame. The mod
series is identified as follows:

Sep-97: How to disassemble WiNRADiO (for surgery)
Oct-97: WRMOD-1: Reducing Crossover Distortion
Includes a primer on working with SMT devices
Nov-97: WRMOD-2: Receiver sensitivity improvement
Dec-97: WRMOD-3: PLL Phase Noise Improvement
Jan-98: WRMOD-4: IF Selectivity Improvement

These mods are all relatively easy, involving in some cases,
the addition of parts to empty solder pads, and in other cases,
replacing components with different values. The parts are
relatively common, but for those who prefer simplicity and
expediency, I made up a bunch of kits that contain all the
needed parts. The price of the kit is basically cost at
$7.00, ppd, domestic USA. The parts required for the first
four mods are shown in Table 1.

TABLE 1: WINRADIO MODS PARTS LIST
==================================

MOD # ITEM VALUE TYPE/SPECS
----- --------- ------- ------------
1 Resistor 1.2-k SMT 1206 5%

2 Capacitor 0.1-uF SMT 0805 X7R
2 Resistor 12-k SMT 0805 5%
2 PIN Diode VHF/UHF MMBV3700-LT1
switch or HSMP-3830
or 1SS314

or MMBV3401-LT1
2 Wire, ins 4" 22-24 ga solid

3 Capacitor 100-pF SMT 0805 X7R
3 Capacitor 100-pF SMT 0805 X7R
3 Capacitor 0.1-uF SMT 0805 X7R
3 Capacitor 0.1-uF SMT 0805 X7R
3 Resistor 18-k SMT 0805 5%
3 Resistor 18-k SMT 0805 5%
3 Resistor 12-k SMT 0805 5%

4 IF Filter CFW455I Ceramic IF filter

Interestingly enough, the factory has incorporated these improvements in the latest production run of the WiNRADiO cards. You should know how to tell the difference so you'll know whether or not to perform the mods to your unit

HERE'S HOW TO TELL
==========

Newer WR cards that can't benefit from the first four mods have a bar code label with a six-digit number preceded by a prefix "W1CHx", for example W1CHR002027. These cards do not need a modification.

Earlier cards that can benefit from the first four mods have a different prefix or a five digit bar code number without a prefix, for example *05678*.

Detailed instructions and parts lists accompany each article.

Though I do not own a trunk tracker, this is what I know...for your
benefit. So far, the only system that can be accurately tracked is the
Motorola trunking system. So, if it is a GE or Johnson or other system in
your area...you can forget tracking it. However, the Uniden trunk tracking
scanner does an excellent job on Motorola. And, it's considerably less
expensive than Icom's. Our local P/D bought two or three of them and were
very annoyed at how well they worked in following the groups in their
Motorola trunking system. From what I've heard from a friend who works as a
fire dispatcher, the units have "never missed a beat" as he puts it.
Good Luck,

Roger Chao wrote:

Oh dear!

Yet more pointless awards...

Where's the challenge in this one? A marketing campaign? Spamming? Didn't someone once say the internet is replacing all that is interesting about amateur radio? This is very sad.

I think that this message should have been posted on 1st April...

WINRADIO'S DISCRIMINATOR and DETECTOR OUTPUTS
==========

Like all receivers, WiNRADiO has the capability to
detect digital and other non-voice signals such as pagers
(POCSAG), Morse Code, RTTY, FAX, AMTOR, ASCII, etc. Mere
detection of such signals isn't enough and it's usually
fruitless to tap these signals at the headphone or speaker
terminals for external processing due to internal voice band
filtering that lops off much of the data. (See my March-96
and May-97 Experimenter's WorkShop columns in Monitoring Times.)

Generally speaking, external signal processing is best
done on signals tapped from their sources or points of detection,
e.g., the detector for AM signals and the discriminator for FM
signals. The best source of unfiltered line level WFM and AM
audio signals in WiNRADiO is at TP-29 or U5, Pin 9 (TA7640AP).
For NFM signals, take the output from TP-20 or U2, Pin 9 (MC3372D).
Should you need to extract data from SSB signals, tap the output
of U6, Pin 1 (LM324M).

Signal taps should always be via a 1.0/25v to 2.2-uF/50v
tantalum capacitor, (+) to the tap point and (-) to a shielded
mini-coax to your output jack mounted on the back of the radio
somewhere. WiNRADiO's backplane screw-down bracket has enough
room to mount a mini phone jack or two for your line level outputs.
Use a shielded coaxial patch cable from any such jack to your
external processor device.

Refer to Monitoring Times "Experimenter's WorkShop",
September-1997 issue for complete disassembly instructions for
WiNRADiO. The monthly WORLD SCANNER REPORT, V7N4, also has the
disassembly instructions.

>three packs, and they suck!

The problem is in the design of the EXP9200.

I have one, and it literally took me 4 batteries to make it through a business day. I retired the thing because it does not get loud enough for this old deaf boy to hear.

The thing transmits at 100 milliwatts. That is an incredible amount of power for a cordless phone. It has unbelievable range. You probably noticed that the back gets quite warm when you are talking on it.

The spread spectrum module is a separate entity in the handset and as I recall from the service manual there may be some adjustment for power output level. Turning it down a good bit certainly would help with battery life.

It is a very very nice phone, secure, and the speaker phone part in the handset is wonderful. Just that battery life is too short and if your ears are shot you're out of luck. And I need a 2 line phone. Good human engineering; it was the most comfortable cordless phone I've ever used. And I liked the stubby antenna which is convenient and probably works as well as it does because of the outrageous transmit power.

My dad made me a few spare packs using high capacity nicads. A lot of work to get them to fit in the phone, and they're not pretty, but they last approx twice as long as the OEM nicad packs.

If you keep several battery packs around and rotate them you can get some good service out of the phone. But also you get no low battery warning to speak of. Once it goes into low battery you have about 15 seconds to grab another phone or you're history. You learn not to stray too far from a corded phone or you'll lose your call.

Mine's for sale on my website Used Equipment section. I replaced it with the newest Sony 2 line digital 900 megacycle phone, which is a very nice piece that has caller ID name and number on the handset. Very convenient. But still the earpiece doesn't get loud enough for some weak international calls.

Uniden was close.

It is illegal in the US, but they would not have to use a converted
scanner. I have a scanner that I bought in early 1986, and it gets cell
phones. The manual even tells you the proper way to get them, regarding
offset, etc.

Just more evidence that law makers do not know english. Why do they insist
on writing laws that people have to guess the exact meaning? Are they not
able to write with any "precision". The same is true regarding HR-2369.
There is all kinds of speculation on what that means. "Communictae"
lawmakers!!!!!!!

Why would they need attorneys? There are no laws involved, just decisions
that have nothing to do with any laws.

Are you talking about the "Clearnet" PCS mobile phone service in Canda?
Those mobile phones are 1900 Mhz CDMA, and you will not be able to hear
those at all.

2255. San Bernardino County Frequencies ??

Thank all of you for your answers. I think I need to find a simple book for beginners. The Radio Shack book explained birdies, but I still don't understand. Just like I don't understand why the fire/ambulance calls are preceeded with an woooo-WOOOO-woooo.

I bought the scanner in the first place since we live in a fire area in Northern California, but I'm getting hooked on listening to the police bands. I'm a lot more careful about locking the doors at night when my husband is gone. I thought our small town was pretty crime free until I started hearing all the calls for vandalism, break-ins and domestic violence. Too bad.

Thanks again. George Ann (who was half-way through being a sexagenarian before she realized it didn't mean what she thought it did.)

Only if it is a CDMA receiver equipped with the proper spreading codes.
A narrow IF band scanner will deliver nothing except perceived noise.

I would like to perform the AR8000 filter mod to solve the
squelch problem (this is my main concern, not the sound
quality) and have two questions:

1. What is the preferred filter to use CFWM455D (wider) or CFWM455E
(narrower).

2. Where can I get this filter in quantities of one (preferably in the
US) ?

Thanks for your help

The problem is the battery technology used. Ni-Cads. You may be able to
find a battery that has the same "contacts", and voltage, but a higher
"mAh" rating. But still, they woulkd be Ni-Cads.

> than making a few dollars from their manuals.

Really? So, by abiding with what a government agency "asks" you
to do, so that you don't risk being pressured by them with more forceful
means, is getting in bed with them? Wow, tough line to draw. I guess
I'd better start speeding on the roads when I drive, lest I be accused of
getting in bed with the state police for following their rules.

> Tandy doesn't care about free speech or their small scanner anthusiest
> related business , they're out to make a dollar .

Exactly. After all, that is business. Besides, if they can't
make dollars selling scanners, that means we can't buy and use them,
either.

Not to mention, you just said they were more interested in "being
in bed" with the government than making a dollar. So, which is it?

> It's more profitable being in bed with big government than having any
> freedom.

If I had a choice between not being able to repair my scanner if
it broke, and not having one at all, I think I'd choose the former. At
the very least, I can scrape up the cash to get a new one, though that
won't help me one bit if the gov't has a reason to be goaded into
prohibiting me from doing that at all.

2269. Naked Truth (listening to mobile phones)

Newsgroup: rec.radio.scanner
Date: 1997-10-24 00:00:00 UTC
From: Justin Alexander <justin@bbs.st.net.au>
Message-ID: <34501B20.7468@bbs.st.net.au>
Source record: 182361

I live in Australia and we get the tv show Naked Truth , but we are behind in episodes. I saw a episode of Naked Truth where they showed one of the photographers listening to a mobile phone converstation on a scanner.

Now isn't that illegal in your country and it would have to be a converted scanner.

The episode had Jon Lovitz in it as Nora's arch nememis. Jon turned up at the place before Nora did and bet her to the photograph.

He was using a scanner to listen in to her mobile phone converstations.

I want to know if it is illegal (I have seen all the messages about this)
why are they allowed to show it being done on television.

Justin Alexander

(Taken from the WiNRADiO HELP file)

FREQUENCY STEPPING
==========

In WiNRADiO, three methods of stepping among frequencies are provided: Fixed stepping, Auto-stepping and Memory stepping. To select a stepping method, press the Select button in the Stepping group until the desired stepping method is shown. You can also press the T key to the same effect.

To step through frequencies, press the Page Up or Page Down keys to step up and down respectively. The effect of these keys will depend on the stepping method selected and the setup for that method. You can also use the mouse and click on the up and down arrow buttons next to the frequency display.

Other methods of stepping through frequencies can be achieved by using the Fine tuning control and the Duplex Separation feature.

2275. WiNRADiO Memory Functions

Date: 1997-10-25 00:00:00 UTC
From: winradio@san.rr.com
Message-ID: <345203ac.4360536@news3.cts.com>
Source record: 182165
Cross-posted to: rec.radio.scanner,alt.radio.scanner,rec.radio.cb,rec.radio.amateur,rec.radio.shortwave

(Taken from the WiNRADiO HELP file)

WiNRADiO provides a 1000 frequency memory that can contain additional information such as the mode, a callsign, comment, group assignment and hotkey assignment. Each group of 1000 frequencies can be saved in a separate file allowing an almost infinite amount of memory space available (and also allows exchanging of WiNRADiO frequencies between users).

WiNRADiO memory functions include:

- Storing and Recalling a frequency
- Memory stepping
- Scanning memory

The other things that that can be done with the memory include:

- Editing and deleting memory entries
- Saving and loading memory files
- Clearing the memory

webmaster@radiotelephone.net.ham writes:
>sigh..... I hope I can get some converters or something...

Well, most people who use cellular phones don't *want* people listening to their conversations, so don't expect it to be easy. In the past it was, because the creators of the North American cellular system were lazy, and used plain analog FM modulation for phones. Since this is exactly the same as what was already in use for almost all VHF and UHF voice communication (except aircraft), all kinds of existing scanners could receive cell phones.

But European cell phones have always been digital. To receive digital transmissions, you need different hardware - but a modified cellphone is exactly the hardware you need. However, the European system is also encrypted, so even with the correct RF hardware you can't listen to other people's conversations because you don't have the encryption key. I don't know which of the new North American systems use encryption. If they do, you can just about forget about listening to the conversations.

Personally, I wish the NA systems had been encrypted digital from the beginning, like European. Then cellphone conversations would always have been secure. As a result, there wouldn't have been these stupid laws in the USA which try to make receiving cellular frequencies illegal and difficult, which in turn means that most ham and scanner equipment sold in Canada lacks coverage of a particular chunk of frequency range.

Dave

By the way, MASA, your email address above is unusable. There is no .ham domain according to my local name server.

Your message doesn't win any awards for intelligence, either. Digital
is not encryption. It is an emission mode, just like analog.

> maintain their control.

Kindly tell us, WHAT do we control? Do I or WE have any control over what you do? Do I or we control even the lower 25khz od any ham band? What I (and you) have control over is what we individually do with our selves, time, lives, attitudes, efforts, intellects etc. That is ALL. If I had had *control* I would not have learned code either. Who is trying to *gain* control?

' We walked six miles in snow uphill to school
> -both ways and so should you.'

No, it was only 1 mile each way, tho it did snow sometimes-many others still walk that far to school today, too. But where do you get the idea that I(we) are trying to force that, or anything else, on you? If you want the shingle all you have to do is meet the qualifications, just like everyone else does and has. Quitcherbitchin'.

The military has dropped code, the Coast
> Guard, the rest of the world..

So? Care to give us some examples of the similarities and differences between the military, coast guard, the rest of the world and ham radio? In case you haven't noticed, ham radio operates under a much different and very much broader charter and concept that any organization that needs purely and only communications. We are the *Amateur Radio Service*. We do, or should be ready to do, many things for a wide range of people and entities. "In the public interest, convenience and necessity" is the way it is stated in Part 97.

>Time for the amateurs who used to be first
> to catch up with the rest..

Sorry, our communications capabilities preceeded those of all those other users and their capabilities were predicated on ours. The fact that they have discarded everything that they don't presently need is certainly no indication that we should follow suit since their needs are NOT the same as ours. We don't have to pay attention to organizational budgets and funding, making certain that the taxpayers contributions are not needlessly wasted.(wish they would REALLY do that)

Our service, on the other hand is very diverse and spread all society and civilization, with needs that cannot be fully determined until such

time as sudden events decide our directions for us. Who has control of that?.

To say that the code will never again be needed bcause newer technologies are available is to say that your 10 year old car cannot take you from point A to point B. After all, it too is obsolete and outdated. When new cars are in the possesion of all drivers, all older cars and Morse code can be done away with.

More likely, he is referring to the Clearnet "Mike" system, which is the same or similar to Nextel in the USA. It is the Motorola "IDEN" system (Integrated Digital Enhanced Network??). The Mike service from Clearnet is basically an 800 Mhz trunked radio system but using all digital transmission. you can get the frequencies for this from several sources (Try the Quebec haruteq scanner guide?). But its pointless as you will only hear data on your scanner (not voice). On the other hand, if you are using Motorola portable radios on one of Clearnet's conventional trunked SMR (Specialized Mobile Radio) systems, you CAN monitor this. You will still need to program your scanner with the trunking system frequencies, and the conversations will hop from channel to channel as the system is shared with other users. You have to first find out which of the three systems your school is using (Clearnet PCS, Mike, or regular trunked "SMR" service)

n9mxt@aol.com (N9mxt) wrote:

> I just received a PRO-2006 with the back light burned out. How do I
> replace this part and where can I get this part?

Easy question. Easy answer. There is one and only one
source of the backlight panel for the PRO-2006. Tandy
National Parts at (800) 442-2425.

Specify the EL PANEL (Electroluminescent Panel), EL-501,
GE-88D-7738; for a PRO-2006, cat# 20-145. Cost is
uncertain, but expect a good $12-$15.

Not the easiest job, though. When you go to replace it, the
entire LCD/CPU board inside the front panel has to come out
first. Then you'll have to study the back side of the LCD
panel to see how the EL Panel slips in there. And it's held
there by a litte gob of white cement that has to be slit
with a razor or Xacto knife. Then after you unsolder the
orange and white wires, it will slip out of the grooves that
hold it.

You'll see how, more or less, by studying the replacement
and the LCD panel assembly before you ever lift a hand.

Be careful and don't let any dust or lint settle on the
glass LCD screen or the clear plastic window of the front
panel, else it will look awful after everything is
reassembled.

I have a Scout that has worked just fine until recently. All of a sudden it is deaf as a post. It will no longer hit on FM broadcast towers as I pass by them, or other strong signals.

If I transmit on my 2M or 440 rdio in my car, it will hit, and that is what I think my problem is. I think I may have overloaded it by having the Scout antenna only a few feet away from my 2M rig. On the chip side of the main board opposite where the antenna jack's center conducter is soldered is a small surface mount componant. It is marked as C1. Could this be an overload protection device, or is there something else similar in function to a fuse that may have popped that I could bypass to check?

I do not have the service manual for this unit, but I think I will be calling Opto on Monday...

TIA!

WiNRADiO Sales USA wrote:

More on WiNRADiO's Spectrum Scope
==========

Taken from the WiNRADiO HELP file:

A significant new feature in version 2.x of WiNRADiO is the
Spectrum Scope. It allows you to sweep a specified range of
frequencies and visually show the signal strength across the
range. This allows you to quickly find transmissions and
tune to them with a single click of the mouse.
The scope can show any combination of the current, maximum,
minimum and the difference of the maximum and minimum sweeps
on the display, and be able to zoom in to see details, and
zoom out to see the overall sweep.

The frequency range to sweep can be specified by entering
either the start and stop frequencies of the range, or the
centre frequency and the sweep width. The step size is also
adjustable for fine detail or a coarse and quick sweep.
There are also two selectable resolution bandwidths (6 and
17 kHz) and can even be changed while in the middle of a
sweep.

You are also able to save the spectrum and recall them at a
later date or distribute the spectrum file to other people.
Note that the scope will NOT prompt you to save the file
> (not even when you close it), you have to explicitly save
> the file when you want to keep the current sweep(s).

97.1 Basis and purpose.

:The rules and regulations in this part are designed to provide an amateur
radio :service having a fundamental purpose as expressed in the following
principles:

:(a) Recognition and enhancement of the value of the amateur service to the
public
:as a voluntary noncommercial communication service, particularly with respect
to :providing emergency communications.

:(b) Continuation and extension of the amateur's proven ability to contribute
to
:the advancement of the radio art.

:(c) Encouragement and improvement of the amateur service through rules which
:provide for advancing skills in both the communication and technical phases of
:the art.

:(d) Expansion of the existing reservoir within the amateur radio service of
:trained operators, technicians, and electronics experts.

:(e) Continuation and extension of the amateur's unique ability to enhance
:international goodwill.

Your first comment above, covered ONLY 97.1(a) ... you "conveniently leave out"
(b), (c), (d), and (e) ...

> In a worse-case situation, this may require using primitive or
> partially operating equipment and adverse operating conditions.

Only if one is so technically incompetent and lazy as to be unprepared and
not have sufficiently robust and redundant means to communicate.

The well-prepared ham who can provide meaningful, useful emergency services
communications (which is NOT Morse these days, it's tactical voice or text
based digital modes with better performance, accuracy, and reliability) is
FAR more useful than hordes of unprepared, technically incompetent beepers.

> Because CW
> (Morse code) it is a very "narrow" signal- requiring little bandwidth, it
> can get out with low power and through high noise better than any other mode.

Patently false. Simply another regurgitation of Morse Myth #1.

> It could be the diffence between being heard or not!

Fantasy-land wishful thinking a-la the flick "Independence Day" (Morse
saves the world from aliens who are technologically advanced enough
to come here, shrug off nukes like mosquitoes, and kick our asses ... but
Morse brings them to their knees ... right ... in someone's acid flashback,
maybe.)

> What I can't understand is why there is so much belly-aching about the code
> now? I didn't hear this when I got my license in the 1960s. We accepted
> learning the code as part of the process, and anyone who gave it any effort
> did!

First, by your own admission, people were more "compliant" then ... less
willing to stand out by asking "why?" ... less willing to challenge any
form of authority and question the justification for anything that "big
brother" said was so ...

There were also DRAMATIC differences in the available technology and the
pace at which our entire society moved and the rate at which the world
around us was changing. It was also 30-some years closer to the time
when Morse was *necessary* if one wanted to communicate at all.

> So what's wrong with people now a days? Are they dumber? Or just
> lazier?

Neither ... it's not that there is anything "wrong with people" in general,
it's just that more people are less accepting of seemingly senseless things
just because some rule made decades ago in a different time and world said so.
People are asking "awkward," sometimes unpopular questions like "Why?"

This is largely because today's society places tremendous drains on everyone's
discretionary time and busy, intelligent people tend to question the "Why?" of
ridiculous, archaic "requirements" like Morse that they *know* they will never
use and have no interest in using.

The "resistance" of Morse operators to allowing a "free market" approach to
learning and using Morse where everyone is free to choose to learn or not learn
and use or not use Morse is really pretty pathetic. In essence, their
insistence
on forcing everyone to learn Morse is an admission that it no longer has enough
value to draw people to voluntarily learn and use it ... and the Morse folks
are
afraid to death that soon there will be nobody to beep with.

I find that argument absurd and the fear (like most fears) to be irrational.
Like horseback riding and many other activities that *used* to be a part of
normal daily life for most people, Morse will continue to draw a
self-sustaining

group of people who do it "just because they like it" or "because it's fun." That not all people will feel that way is not bad, nor does it doom Morse to extinction.

I wish the beepers could "get" that part.

Be more specific. In what bands? And using what antenna? On HF none
of the multi band handhelds will do all that well; the little ducky
antenna is worse than a wet noodle as far as hearing HF is concerned...

2307. Handheld or Base?

Newsgroup: rec.radio.scanner
Date: 1997-10-25 00:00:00 UTC
From: Jason <johndc@erols.com>
Message-ID: <345284FA.416A@erols.com>
Source record: 182197

Which type is most useful, handheld or base unit?

I live in a valley which is very bad for radio reception, this is why I don't really think that I should get a base unit. I wouldn't recieve much around here. If I got a portable though, would I be able to just set it down and run it through a roof antenna when I am at home, and then put its regular antenna back on when I want to use it somewhere else. Would putting a stationary antenna on a portable unit, somehow reduce its abilitites?

Thanks,
Jason

2308. Transmission Freqency

I'm relatively new to this list (and Scanning in general).
I have an RS Pro 2035 and would like to know how one would go about linking this unit to a computer (i.e software (where available), Cables etc) and , If I were to get the two linked what performance benefits could I expect (if any)?

No, the reason that Morse Code was a requirement for a Ham License, was so that all Ham operators could understand urgent messages from the military, as early Ham operators were considered by the government to be a reserve of radio operators for the military if needed. (very scary, but that is not what Ham radio is today) Since ALL of the military have discontinued using morse code, the initial reason for it as a requirement, (which was NOT just to make it "harder" or "less easier" for one to get a license, or to "weed out" the "lazy people") is no longer valid.

Canada is using the above logic to ask the worldwide requirement be dropped as it is obsolete. Too bad the US or the ARRL can't use LOGIC, but rather cave in to the money paying members that want the requirement to stay!

This is wrong! How many people that receive the signal will UNDERSTAND
the morse code? On the other hand, anyone, even a NON-ham with a
scanner or SW radio, will understand the VOICE cry for help!!

The odds of being saved are thousands of times better if you use VOICE
over Morse code! A bunch of beeping tones that got through the noise
loud and clear are completely worthless to the majority of Humans who
would be able to help you, but can't understand morse code. And what is
all this crap about getting through noise in the first place? Are you
asking for help from someone on the otherside of the planet, or to
someone withing a few miles that can actually help you?
VOICE mode will get through JUST FINE!

I would not be able to rely on a 10 year old car as well as the new one. There are new cars, because no one wants to ride around in a model T Ford when we have the technology for so much better. Morse Code was invented because there were no microphones invented yet, once they WERE, telephones replaced telegraph. Using morse code today, is like washing clothes by hand, using an abacus instead of a calculator, writing on stone tablets instead of paper, using leaves instead of toilet paper.

Why must everyone go BACKWARDS in technology?! If you want the morse code requirement, then you ALSO want all radios to be made with TUBES instead of transistors or ICs! I am suprised that you are actually using a computer and are on a newsgroup! What's the matter, not enough people on the Ham bands to use morse code with?

No question about it, and here's a hint. If you have a HF receiver, Tune in WWV code practice sessions. They transmit daily at 4,7,and 10pm EST on frequencies of 3581,7047,14075, 18097 Khz, among others. The format is alternated for the three daily sessions,and beginning the session with slow code and ending with fast code, on the 4pm and 10pm sessions. On the 7pm session, they start with fast code and reduce to slowest as the session progresses.(This is the Sunday schedule. The fast and slow code times switch to the opposite time each succesive day) I believe you can find their schedule on the ARRL web page, tho I have not tried. It is published in QST.

I like to try the 7pm sessions where the code starts fast, much faster than you can copy, then comes down (they send several minutes of esch speed). Listen for characters in the fast code. Before long you will find that you are hearing letters, and soon short words. As the practice session progresses, and slower code is sent you will be surprised how slow 18wpm sounds. Do this for a few weeks, then go take your test. You may find yourself copying 20wpm. Results, if you will really practice like this daily for a few weeks, are guaranteed or your money cheerfully refunded in full.

Seriously, this is how I got to 20wpm for the extra test in 1970.

73 and gud luck, Dick W0EX FISTS #3939

Message-ID: <62ulqq$lj6@crl2.crl.com>
Source record: 182212

Well, PART of it involves actally learning about how the equipment
works, on a theoretical level how the waves propogate, and so on.
More knowedge, more privileges.
A minimum level of competence is established (you need to know more
than the controls), and some of the "old geeks" are in their teens,
many in the 20-40 range. Oh, and many hams serve the public in time
of disaster, when a lot of communications are either down or overloaded.
Then, again, you don't get a bill every month, and if you follow the RF
safety guidelines, getting a tumor upstairs isn't a risk, like some folks
say is a problem with having that cell phone antenna next to your head.

"Emilio Goldstein" <Egoldstein@somanet.com> writes:

>What is the point of "ham radio"?
>Is it more than a bunch of old geeks who haven't heard of cell phones?

2326. Service manuals - the facts.

Newsgroup: rec.radio.scanner
Date: 1997-10-25 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19971025020200.WAA17054@ladder01.news.aol.com>
Source record: 182230

All,
After several weeks of digging, I have uncovered the following information regarding the decision by RadioShack to stop selling service manuals and other scanner technical information to the general public. The following is my own opinion, and does not reflect the position of any business or publication with which I am affiliated.

In a move that has angered radio hobbyists nationwide, Tandy Corp. (dba nationwide as RadioShack) has stopped selling service manuals and schematics for scanners to the general public, citing a request from the Federal Communications Commission.
Customers attempting to order service manuals and schematics from Radio Shack were either told by the sales clerk that the material was "restricted," or if they tried to mail order the information, they received the following message:
"The FCC has requested that all vendors and scanner manufacturers not release schematics for scanner products that are offered. Radio Shack is complying with this request. We regret we are unable to assist you with your request. Thank you, TANDY PRODUCT SUPPORT CENTER."
This move is apparently an outgrowth of a new Uniden of America policy to submit all scanner certification applications to the FCC under various rules of confidentiality. Uniden, which builds and sells the Bearcat line of scanners under the Uniden name, also manufactures many of the scanners sold at RadioShack stores.
Jim Haynes, Uniden's vice-president for engineering and legislative affairs, said the FCC "suggested" in early 1997 that Uniden submit its scanner certification applications under confidentiality rules so that "hackers" would no longer be able to obtain copies of the schematics and details of the operating software from FCC files.
The FCC hopes to slow down the illegal modification of scanners - primarily to receive cellular telephone calls - by keeping schematics, block diagrams and details of the operating software secret, Haynes said.
But when Uniden submitted its first application under the confidentiality guidelines the FCC turned it down, saying it could not keep the application details secret if Uniden was going to sell the same information to the public in the form of service manuals, he said.
The thing is, the FCC denies it made such a suggestion.
Julius Knapp, chief of the FCC's Policies and Plans Division of the Office of Engineering & Technology, confirmed that Uniden has filed a petition with the FCC asking that all of its future scanner certification applications be treated with confidentiality - a request that is routinely granted - but Knapp said the FCC had not suggested such a move.
So far, neither Uniden or Tandy have produced a copy of any written request from the FCC, nor will they say who at the FCC made the alleged request or

suggestion.
Larry Van Horn of Monitoring Times has confirmed from two sources that the suggestion did come from the manufacturers - not the FCC - following congressional hearings earlier this year.
The FCC has been under great pressure from Congress to crack down on the scanner industry to help safeguard the privacy of cellphone and PCS users. Maneuvering to restrict the flow of technical information to the scanning public could be seen by some as a step in the right direction.
It's also possible this is a preparatory step to enforcing H.R. 2369, should it become law. Briefly, H.R. 2369 will require the FCC to deny certification to scanners unless the frequencies used by Commercial Mobile Radio Service licensees are blocked, much like cellular frequencies are blocked in new scanners today. The CMRS includes hundreds of frequencies, scattered across the radio spectrum. Restrictions on service manuals and other technical information could be an attempt to prevent hobbyists from unlocking the prohibited CMRS frequencies in future scanners.

Yes, some people do, but it is illegal.

Does the
> FCC really regulate this band?

When there is a complaint, or a safety issue.

QTH here is far away from any major body of
> water, so there is no activity on the marine channels.

Doesn't matter. Some areas have had licenses issued to police and other agencies on or near marine channels away from navigible waterways.

If I set my radio to
> "International" channels, will that prevent my signal from QRMing any licensed
> marine operators?

You won't interfere with marine ops, but ITL marine channels from 156.025 thru 156.25 are assigned to public safety operations nationwide in the US.

I have found that my local train yard uses international
> marine channel 4 for their operations, so that's why I'm asking.

Rail ops on 160.215 thru 161.565 are on freqs that in other parts of the world are assigned to marine ops, thus they are in the marine radio under the International channels.

Also, how
> much does a used VHF-Marine go for? Please respond to newsgroup and by
> e-mail (preferably). Thanks.
>
> 73s
>

I suggest that you get a couple of the new Family Radio Service radios from Radio Shack, K-Mart or other store. They are cheaper, legal, and should fit your needs without worrying about the FCC breathing down your neck.

From a government standpoint, the only way to justify the existence of the amateur radio and it's many frequencies is to provide communications in times of emergency. In a worse-case situation, this may require using primitive or partially operating equipment and adverse operating conditions. Because CW (Morse code) it is a very "narrow" signal- requiring little bandwidth, it can get out with low power and through high noise better than any other mode. It could be the diffence between being heard or not!

What I can't understand is why there is so much belly-aching about the code now? I didn't hear this when I got my license in the 1960s. We accepted learning the code as part of the process, and anyone who gave it any effort did! So what's wrong with people now a days? Are they dumber? Or just lazier?

The 381 line post by "James S. Carlson Esq." <Aqua@america.com>
of 18 USC Sec. 2511 was quite impressive, except that it's out of date.
It was apparently taken from the "US Code on CD-ROM" that was issued in
1990 by the GPO (S/N 052-001-004-00439-6). It fails to reflect the
amendments made by the 1994 Digital Telephony Act to subsections
(2)(a)(i), (4)(b), (4)(b)(i), and (4)(b)(ii).

These modifications added cordless to the cellular listening ban
and also banned interception of xmissions whose modulation parameters
have not been made public.

While this may seem like a minor quibble, it is precisely subsection
(4)(b) that affects scanners.

```
More on WiNRADiO's Spectrum Scope
=================================

Taken from the WiNRADiO HELP file:

A significant new feature in version 2.x of WiNRADiO is the
Spectrum Scope. It allows you to sweep a specified range of
frequencies and visually show the signal strength across the
range. This allows you to quickly find transmissions and
tune to them with a single click of the mouse.
The scope can show any combination of the current, maximum,
minimum and the difference of the maximum and minimum sweeps
on the display, and be able to zoom in to see details, and
zoom out to see the overall sweep.

The frequency range to sweep can be specified by entering
either the start and stop frequencies of the range, or the
centre frequency and the sweep width. The step size is also
adjustable for fine detail or a coarse and quick sweep.
There are also two selectable resolution bandwidths (6 and
17 kHz) and can even be changed while in the middle of a
sweep.

You are also able to save the spectrum and recall them at a
later date or distribute the spectrum file to other people.
Note that the scope will NOT prompt you to save the file
(not even when you close it), you have to explicitly save
the file when you want to keep the current sweep(s).

Finally, there are two ways to tune a frequency in, a single
click to tune in the frequency where the mouse is, or a
double-click to tune to the nearest peak which depends upon
the slope where you click. Click on the various parts of the
image to see what each control can do.

[lots of good info cut]

As I =
said, overall this scanner kicks butt and takes names. I would consider =
it the best base station for the money, hands down. I am quite happy =
with the scanner itself, but Uniden and Scanner Master (the maker of the =
software and cable) could've done better with the =
accessories.

Is the software actually available? I haven't seen it being offerred. Do you know if the scanner can be PC-controlled as well as autoprogrammed or is it just for control?

Someone else here suggested that there has been some foot dragging on the part of Uniden as well about coming out with the cable but I don't know why that would be so. Scanner Master publishes some terrrific reference guides at a reasonable price, but everything else they offer, such as freq databases, seem out of line to me.

Because in the 60's there weren't other modes that would perform just as well if not better (digital). Folks didn't "belly-ache" cuz there weren't really any options. Now there are. And it's also time to bring Ham/Amature operations fulling into the 20th century.

These days that argument holds about as much water as saying we should have to learn semiphore - in case the phones quit working.

Phil,

I agree with most of your statements about the Trunk Trackers, especially the goofy "serial" connector. However, in "Complaint three" you mention not liking the 30 channel banks. In your area everybody may be running 15 or fewer channels in a trunk system, but in many areas (Columbus, Seattle, Orlando), the Public Safety Trunk Systems run as many as 28 channels (the maximum for Motorola Smartnet). If Uniden didn't supply at least 28 channels, you would miss some of the conversations on these large systems.

Tom

Whatever antenna you finally decide to use, I strongly suggest the use
of a signal preamp such as the GRE Super Amplifier 3001 sold by Grove.
Using the Uniden BC8500XLT here with that preamp, I'm able to receive
all of the NJ State Police frequencies in both North & Central Jersey.
Without the preamp I can only receive local transmissions. My antenna is
a Discone about 35' high.

PRESS CONFERENCE A statement to the press on August 15, 1997 at the GAY AND LESBIAN PRIDE CENTER 125 N. PARKSIDE DRIVE Colorado Springs, CO Offices of Ground Zero Colorado Springs

A Public Apology and Appeal by Gil Alexander-Moegerle Co-Founder of Focus on the Family (909) 592-6660 mailto:GMoegerle@AOL.COM

CONTACT: FRANK WHITWORTH OR JULIE COOPER 719-635-6086
GARY BOETCHNER 719- 535-0320

Hello, ladies and gentlemen. I have a statement and then I am happy to take questions.

My name is Gil Alexander-Moegerle. I live in Los Angeles with my wife Carolyn and I'm the proud parent of three great young people and the grandfather of a fine little boy. Please ask to see pictures of my grandson when we're done.

I'm the author of the new book "James Dobson's War on America", the first book to critique James Dobson's character, style and political agenda from an insider's perspective.

I was one of the co-founders of Focus on the Family.

In 1977 seven people signed their names to the legal documents that started Focus on the Family. We were its first Board of Directors. You will find my signature among the seven, along with my former friends Jim and Shirley Dobson, Mike Roberts, Mac McQuiston, Peb Jackson and Bobb Biehl.

One of those seven founders was a ten year veteran in the fields of broadcasting and fund raising and therefore accepted responsibility for managing the day-to-day start-up activities of Focus on the Family. That person was me.

I personally set up the three core operating divisions of Focus on the Family:

* The Broadcast Division: I was the founding Executive Producer of Focus radio its on-air co-host, and the person responsible for the program's initial syndication and distribution.

* The Publications Division: I was the founding editor of the Focus magazine and oversaw its initial production and circulation.

* The Mail Processing Division: I established the organization's first post office box and bank account, oversaw the answering of its first listener letters and the receipting of its first donations, and set up its first computer-based mailing list.

I also started:

* The Film and Video Division: I was responsible for producing the very first Focus on the Family film, "Twice Pardoned," which was awarded best film of its type in 1987.

Speaking, then, as a co-founder of Focus on the Family, I have come to Colorado Springs to make two statements.

First:

I recently heard the Jewish philosopher Dennis Prager say, "Civility requires that responsible members of the various groups that make up a culture have the courage to apologize to the rest of society for bad people within their group."

I have come to issue just such an apology for certain actions and attitudes on the part of the Christian Right in general and James Dobson and Focus on the Family in particular:

First, I apologize to the women of America for the sexist attitudes all-too-often displayed by James Dobson and the organization I helped found.

I apologize to African Americans and other ethnic minorities who are concerned by the continuing vestiges of intolerance in the land and by the dangerous role James Dobson, a wealthy, powerful, white, heterosexual male, plays in promoting intolerance.

I apologize to lesbian and gay Americans who are demeaned and dehumanized on a regular basis by the false, irresponsible, and inflammatory rhetoric of James Dobson's anti-gay radio and print materials.

I apologize to Jewish Americans as well as Muslim, Hindu, Buddhist, and atheist Americans who are also victims of the dangerous words and divisive political actions of James Dobson, who claims quite falsely that this is a "Christian nation" that should be "ruled" by fundamentalist Christians and their doctrines.

I apologize to the American media, specifically to radio, television and print reporters, who have been ridiculed and demonized by Dobson and his staff and guests.

I am ashamed of my former colleagues for their attacks on you and for their pattern of slamming the doors of reasonable access in your face. And I encourage you to bang those doors down, to investigate, and to report the truth about the threat James Dobson and other religious extremists pose to the American tradition of tolerance, inclusivity and the separation of church and state.

And I apologize to my fellow Christian Americans, many of whom have been misled by a man I once loved and trusted. I hope you will not make the same mistake I made in letting my personal loyalty to an old friend blind me to the unchristian and un-American words and actions of James Dobson and so many of his Focus on the Family guests.

I apologize to any American who has felt the sting of James Dobson and the Christian Right wagging their holier-than-thou fingers in your face, shrieking that because your views differ from theirs, you are ungodly, evil and unworthy of the rights of full citizenship.

Please don't let these extremists confuse you about the life and teachings of Jesus. He spoke in love. I regret that Jim and Focus have not.

Second:

I have come to Colorado Springs to call on James Dobson to step down as a political activist and return Focus on the Family to its original mission.

When we began Focus, in 1977, the seven founders had only two objectives:

1. To help Americans raise their children and 2. to help us maintain our marriages.

Millions of Americans would say that James Dobson has made a tremendous contribution in those two areas. Unfortunately, the same cannot be said regarding his harmful foray into big-time politics.

I believe Dobson-style politics have been inept, simplistic, exclusionary, divisive and alarmingly sectarian. Mr. Dobson has shown little respect for our pluralistic system, for differing views or for the core skill of statecraft, of compromise and consensus building. That is un-American.

James Dobson's political style has been one of relentlessly demonizing his adversaries. And he has created the impression that the pathway to national moral reform leads through the legislative machinery of Washington. That is unchristian.

I ask Mr. Dobson:

* to cancel his political radio series "Family News in Focus" and his political magazine "Citizen"

* to get out of the business of organizing and training grassroots political organizations around the country

* to break off his powerful alliance with lobbyist Gary Bauer and the Family Research Council

* to discontinue meeting with politicians in an effort to leverage his influence, to shape public policy, and to pledge never again to devote a Focus on the Family radio broadcast to politics.

* I call on James Dobson to return to the kinder, gentler Focus on the Family we seven founded in 1977; to support America in those noble human endeavors of building strong marriages and raising strong children.

Thank you.

I have an excess service radio manuals for sale. it is a professional
photocopy complete with 11 X 17 glossy of schematics.
Shipping is extra. The manual should not cost more than a few bucks
to ship anywhere to the lower 48 States. Please e-mail if interested
and I will provide an estimate on shipping. Thank You!!!!!

I also have other manuals for sale!

"My fellow Americans....As you know, for over 200 years, Americans have been able to keep and bear arms. But today, guns are sometimes being misused by criminals. As your president, I have decided that we would all be much safer if all guns were removed from our society. Therefore, starting November 1, 1997, you will be given a check for each gun turned in at the post office.
We must do our part to stop crime and by removing guns, I feel you will be much safer. Also, many criminals have been using radio scanners to listen to the police and government officials who are doing all they can to keep your rights and liberties in place, but they are having a hard time doing this because they know there every move is being monitored by someone somewhere. Therefore, when you bring in your guns to recieve your check, please bring in all scanners with you. You will recieve another check for each scanner brought in to the local post office.
My fellow Americans, it was not easy for me to sign these two measures into law, but I believe that it is for the betterment of America, therefore, I willingly placed my signature on these two new federal laws.
With no guns, and no scanners, America will be a much safer place to live. And, those of us in government will be able to go about our business of protecting America without fear that someone is listening in and is aware of what we are doing.
Thank you."

These words were spoken by the US president Bill Clinton in 1997. Shortly after all guns were removed, many other rights and liberties were taken from the people. Riots broke out across the land, but because the government had all the guns, noone could defend themselves against the massive attacks against those involved in public protests. Prior to the implementation of Marshal law, hundreds of thousands of Americans were shot and killed in the streets by government officials.

Because all radio scanners were taken away from the people, they had no way of keeping tabs on their government. This made members of the government much more willing to spy on the people, and monitor them. Needless to say, when government owns all the weapons, and cannot be monitored by the people, tranny soon follows.

>

Is the 6 kHz minimum resolution small enough to be useful in the shortwave broadcast band where channels are typically seperated by 5 kHz? Also, what is the dwell time per channel, and is the plotted signal strength an instantaneous single measurement or an average of several measurements taken during the dwell time? Since the shorwave frequencies are relatively noisy, some kind of averaging would be necessary to make a spectrum display useful to detect low power transmissions. Has anyone tried this product in the tropical shortwave broadcast bands?

73,
Joe

Hey Doc--
But if your Lexus convertible (with top down) breaks down, with dead batery, and a downpour follows, you will gladly take a ride in the first Volkswagen Beetle that comes along.

Morse Code was
> invented because there were no microphones invented yet, once they WERE,
> telephones replaced telegraph.

Sorry, no. The telephone was invented in the 1870's (as I remember reading once) but I know personally that a nationwide radiotelegraph net in use by all major public safety agencies existed into the mid-1960's. Transistions take time, sometimes lots of it. One would not expect anything like such a lag today, but there *IS* going to be a transistion to the new modes and it will take some time, whatever No-Coders wish.

> Using morse code today, is like washing
> clothes by hand, using an abacus instead of a calculator, writing on
> stone tablets instead of paper, using leaves instead of toilet paper.

No, it's just like taking a ride in a Volkswagen when your Lexus breaks down. (I know, that doesn't happen often does it? Neither does the *demand* for Morse code these days.) Besides, many who did not really want to, but did bother to learn it, find it is much more utilitarian that they would have ever suspected, and besides they find it to be fun.

> Why must everyone go BACKWARDS in technology?! If you want the morse

I there is any info for building your own scanner (any Frequency Range)
floating
around please feel free to send it to me. You can remain unknown.
I want to learn the concept of recievers which can be a fairly big circuit.
With the Amp, Mixer, Osc, limiters, Demoduation, etc.
I find it difficult to design my own.
I notice the other messages mentioning Service Manuals.
If any one has an own service Manual it should be scanned and made
available as long as there are no legal issues (Yeah Right!)
I like to listen to frequencies like weather stations ect but do not want
to
buy a over priced radio. Radio's have been around a long time the plans for
one
can not be that much of a secret.
Please feel free to leave Comments and / or suggestions
Any info will be greatly appreicated
People should have the right to listen

>will benefit reception?

For the same money I'd suggest finding a standard cellular base antenna.
Or, you could try what I built...a triple folded dipole.
Figure out the folded dipole dimensions and build them out of 20 amp electrical wire or hobby brass. Make an E-shaped frame out of white PVC plumbing pipe, with the three horizontal lines of the 'E' exactly one wavelength apart. Cut three identical lengths of standard 300-ohm TV wire to feed the three dipoles. Connect the three lengths in parallel. Connect that to a quarter-wave length of 75-ohm coax (remember to adjust for velocity factor). And connect that to a *very* good grade of 50-ohm coax, like 9913 or at best RG-213.

>
>How would you compare the reception power of scanners when you shopping
>for a new one?

I would look at recieve sensitivity. This is measured in microvolts or
it may be abbreviated "uv". The lower the number, the better the
reciever. Example- A reciever that has a .2uv sensitivity is MUCH
better than a reciever with a 1.0uv sensitivity.

There are other factors I look at when buying a reciever, however I won't
get into them right now.

Andy

2382. *** THe NeWs: ICOM IC-T2A HT ***

Newsgroup: rec.radio.scanner

Welcome to "THe NeWs," the news for the hams and the scanner listeners.

This Week's Topic:

ICOM's IC-T2A/T2E

- I purchased a brand new IC-T2A at $219 CAN + TAX = ~ $250 CAN.

- 2m HT txvr

- transmits 140-150. no mod needed.

- receives 137-174, including WX weather channels (in memory).

- 8 AA batteries fit with this HT (no battery pack...)... comes with 8 AA batteries and charger.

- 1W low, 4.5W high power output

- 40 memory channels

- auto repeater offset

- DTMF transmit

- CTCSS transmit/receive

Conclusion: It is cheap. It's a good radio.

This information is for US version. For other versions, please consult your local ham stores. This is for your information only and I am not responsible for unsatisfaction for the product or any illegal actions arising from this "THe NeWs." (ie. transmit outside band).

As far as outside TX capability is concerned, I strongly recommend this radio for outside band users. No modification is needed to transmit outside TX. Open a box, it's ready. (Warning: Transmitting outside band is illegal if you are not authorized.)

Next week's topic: IC-706 & IC-706 MK II, HF + 6m + 2m mobile radio

Two weeks later: ADI's Territory - AT-600 Dual Band HT

If you are looking to obtain a mint (almost new) Diamond DJ-130 Discone antenna, here's your chance. The antenna was recently purchased new from an antenna company, installed this past week, and was taken down after about 36 hours of continuous installation time.

It was removed because it picked up a carrier -- from who knows where -- on a VHF AM aircraft channel. Efforts to track down the carrier failed. This has been a frustrating experience. Because the antenna was connected to a scanner which is used to monitor selected channels, the presence of the previously undetected carrier presented a problem. The carrier was present on 133.475 Mhz AM. Nothing appears to be wrong with the antenna, but the carrier on this frequency is unacceptable because it produces a "beat note" with the monitored radio activities on that channel ... not to mention that it stopped the scanning most of the time.

Although the antenna was purchased for amateur use, it is rated at 200W for amateur bands between 25 and 1300 Mhz.

The antenna has been returned to the factory packaging. It will be shipped U.S. Postal Service Priority Mail in a large antenna mailing tube (same one used by the antenna company who shipped it to us).

Price: $75 (includes pre-paid shipping). Payment by Cashier's Check or MO.

All replies will be answered.

Thank you.

[snippage]

Actually it is the correct coax for use with the venerable R-390 and R-390A
HF receivers -- connect the radio directly to a dipole, no balun needed.
The connectors are still available too.

Not real useful for a scanner I wouldnt imagine though.

You're right Dr. Blows, the law below no longer is enforceable in
Michigan due to a Florida circuit judge's decision on a Florida state
law.

Am I for real?? You're responses are very typical of someone who can't
make a valid argument and back it up with facts and logic. You simply
resort to personal attacks and cutdowns. You're pretty transparent.
This thread is DONE!

Boy, do you get wound up easy....take a pill and relax Dr.

You'd be a buffoon to think a Florida circuit court judge's
decision/opinion on a Florida law would alter this (or any) state's law
regarding having a scanner in a car. I can GUARANTEE if you get stopped
in this state and don't have your amateur radio license or proof of
being a law enforcement officer, you'll lose your scanner and have a
misdemeanor ticket in hand (or go to jail). Regardless of Florida's
decision. If one feels the state is going against federal law, so be
it, be prepared for a COSTLY battle.

Simply read the attatched .gif file:

Jason,
Not at all. Ever hear of the expression that a gardener should dig a $10 hole for a $2 plant? Same hold true for any radio (base or portable. The higher the antenna, the better it will hear what is out there. Of course, one must use an appropriate antenna and transmission line connected to the radio.
Best of Luck,

Just so you know, the Supreme Court, has "never" interpreted the 2nd
Amendment, as meaning that individuals have the right to have arms. It has
always been interpreted as referring to a national force, like todays
army, etc. Why do you think that is?

Not true. In fact, the Supreme Court has never really interpreted it
either way. 2nd amendment cases are quite rare. The last "real" 2nd
amendment case to go before the court was around 1931.

> > hehe (just kidding) I hope digital scanners come out soon...really soon, cuz
> > this sucks, now i dont know why the Hawks Helicopter is flying around!!
> > o(ahh well.

No doubt about it -- I saw a 6 District car go flying by today and my
first reaction was to reach to turn on the scanner - UGGGHHHH!!

The A Channel as a matter of fact could only afford to buy two of the
overpriced radios.

TAC Mobility - the company responsibile for the change over of all new
radios (CPS, EMS and FIRE) say the units cost less than $1,500 but CPS
sells it to the media for $4000 per unit! I guess robbery isn't illegal

when you're the police <wink>

Even if you could find/borrow/steal a police radio, as soon as they figured out which one was missing they could cut it out of the system from their end. Each radio is individual unlike analog. They simply say that today we don't want CFCN to listen to us and *poof* Barb and Darrel are in the dark.

Sorry for the bad news!

Sean

I thought is was a Copyright and Patent thing. For example,
Uniden would have to obtain "permission" from Motorola
to use the trunking software technology for the tracktraker.

Qualcom and GE/Ericson are not going to let Uniden have
"access" to the CDMA/TDMA technology. FM is in the public domain.
Is this why there are no MDT Decoders availible to the hobbyist?

Look in back issues of Pop'Comm and Monitoring Times
regarding a man who was arrested for modifiying radios
so that they could intercept Tulsa, OK. PD Comms,.

Remember back in the 1980's when HBO scrambled it's satellite
transmission, which created a black-market for "piracy" software.
It's the same situation, we now have a under-ground market
for cellular, encrypted, and digital software so that the "hackers"
can intercept the "forbidden" communications.
Is this the new "pirate Radio"?

Also, does the Spread-Spectrum technology used in some 900Mhz
phones and the PCS service render the ECPA '86 obsolete?

2403. FS Pro-51 handheld scanner

Most likely is a scrambling system in use. The Feds in my area use this kind of encryption on occasion. After the user unkeys his mic, I can hear the repeater still keyed in for another couple of seconds like during an unscrambled transmission. And even at times only one party will transmit using scrambling. So you hear nothing but static for one party then normal transmission when party2 responds. Does this sound familiar?

I have made and installed a few of these boards, you can find the
info at http://www.qsl.net/ka2pyj/. I do believe that it is supposed
to be featured in the November issue of Nuts & Volts magazine.

> How much?

I have built the parallel version for about $15 for a point-to-point
wire-up job and about $20 making my own PCBs. You can order PCBs for
the project for round $5. I like using a DB9 though instead of a
DB25 which the PCB is designed for.

> Where can I get it?

You make it yourself and order the parts from Digi-Key. You also
need to download the software that goes with it. It is currently
free during the R&D process.

> How good does it work?

It does a very good job programming many types of scanners. It is a
fairly easy hookup to a Pro-2035/2042 scanner. I can program 1,000
channels complete with L/O, Delay, etc. in just over 16 minutes. I use
it in conjunction with a OS535 interface.

> ect...
> Thanks

That website is fairly new. I haven't had much time to look through
it, but if you have any questions you might e-mail John Montalbano,
myself, or join the mailing list and post questions to the group.

Hope it helps,

Wiggie

2407. Antenna problems?

Newsgroup: rec.radio.scanner
Date: 1997-10-26 00:00:00 UTC
From: J Roder <pda101@net-link.net>
Message-ID: <3454030C.2B24@net-link.net>
Source record: 182108

I'm having problems picking up the EMS agency I work for on my scanner. I just purchased an external antenna from RS, but find that the rubber duck antenna it came with gets better reception. When I first set it all up I got all the traffic, but don't get shit now, and with the duck I get only very infrequent traffic.
The frequency I'm trying to monitor is 453.175, and the antenna I bought covers all the ranges. I ran RG 58 and even bought one of RS power boosters for scanners. Any idea's?
Thanks for any help you could give. I really like to listen to my friends.

2408. antenna problems

Message-ID: <34540739.6BEF@net-link.net>
Source record: 182109
Cross-posted to: rec.radio.scanner,rec.radio.amateur.antenna

Please help me with my antenna problems. Last spring I bought a RS antenna and some RG-58. It is supposed to get all the freq. ranges, and at first did a good job. The freq I was trying to hear is 453.175, which the ambulance service I work for operates on. I was recieving it pretty clear at first, but now don't get shit on it, and I haven't for some time. I actually recieve better with the rubber duck my PRO-51 came with, except I rarely hear my service.
I did also hook up a RS antenna power booster which said it would increase what my antenna would get, but still don't get my service. The antenna worked fine for all the other stuff I listened to, but not the UHF band I want.
I would appreciate any input! Thanks!
Jay

TRY buying older scanners that dont have
800 blocked out if you mess with the chip
you may lose entire info encoded and whipe
itself out if you dont know what your doing
I know tthe AOR 8000 CAN BE MODIFIED AND SOME BEARCATS can be modified
as long as it has some part of 800 band insatlled on board i know the
mobil base 100 channel scanner BC SEVEN is modifable.......hope this is
of some use tou you

ARG THERE WATCHING MY EVERY MOVE........its such a nice day in the
neighborhood.watch out for little green men
WHO WANTS TO BE MY COURT JESTER

I'm new at the scanning bussiness.
I'd like to buy a used/new scanner of this type, but i don't know if
its worthy in Israel.
Can someone tell me of his/her experience with this kind of scanner on
police/ambulance/fire department/airplanes etc, in Israel?
Also, if it does work properly, i would like to buy one, know someone
who's selling?

>
> Thanks,
> Jason
Depends on your portable.....a good one should give few problems.
Possibly some overload from nearer stations.... especially broadcast
stuff .....Maybe some intermod from adjacent frequencies.
A base unit would ,IMO, be less subject to these problems.
Personally, if I could only have one scanner, it would be a quality
portable with as wide a coverage as possible....Yupiteru, Icom, AOR
etc. I have tried them all..except AOR but my favorite ,at the moment,
is the Welz 1000....maybe not as many features as some but small and
very portable. Might be a little confusing to operate for a beginner,
though.
Whatever you decide....don't be too cheap. You will only want to
upgrade when you get the hang of it.
But, then, owning only one scanner is my personal nightmare.
Brian

>schematic with the diode to clip marked.

Bill,

Tandy has made a corporate decision not to sell service manuals and schematics for scanners to the general public. The word has not yet filtered down to all the stores. Immediately after the new policy was confirmed to me by Tandy headquarters I called my local store and asked, and they'd never heard of it. Given time, I'm sure that they will.

I believe www.policescanner.com rebroadcasts the Los Angeles Police Department with permission of the police department. Indeed, the LA PD has their own web site and on it they list all their radio frequencies and basically say that they encourage people to listen in to their communications as part of their "community policing" efforts. They want the citizens to be informed about what is going on.

Doc:

There was a cellular mod for earlier models, but it won't work on later models. It involved the installation of two surface mount resistors, I've been told. I own a later model that can't be modified. Other than that, the only other thing I'm aware of is computer controlled software. Currently, I'm using the low-end DOS type software, sold by ICOM for Uploading, Downloading, and Cloning frequencies. There is some neat Windows software coming out soon.

It is also best to only use channels 1-7, if you are near a GMRS repeater.
Channels 8-14 are near the input frequencies for the GMRS repeaters. See
the July, 1997 issue of "Popular Communications" article on the FRS.

Just bought a Trident TR2400. Have no manual, can't figger out
how to run the memories? Can anyone supply a copy of the user manual?
I'm near Portland, Oregon.
TIA,
miker

Ever hear of the term "penis envy"? {BSE GRIN!} They've made it their
life's task to clutter up the newsgroups by posting all the drivel they can
about Bill. If you have a newsreader that'll allow you to set up filtres then
you can almost totally eliminate them from your `mail'. If you cannot set up
filtres then there are always the "(N)ext" and the "(D)elete" keys. With the
`fact' that the InterNet is `basically' an Anarchy you will always have mental
midgets like this babbling away.

> Did Bill Cheek forget to remove his signature file when posting this as
> a WiNRADiO representative? Tell such deception isn't so.....

No. There was never any deception. If there were, I sure
wouldn't have used my same old ISP. That's not real bright
for deception purposes. I did set up a separate instance of
a newsreader to handle just the WiNRADiO issues so as to be
more efficient and focused. As you may be aware, software
setups can be complicated and lengthy and it took a while to
get it the way I wanted it. I use Agent 1.5, the commercial
version, and there are at least 22 menu tabbed screens of
setups, some of which have multiple setups per. It takes a
while.....like even a few days.

The crux came when some guy asked who I was. I had to
wonder where the heck he was coming from for a minute until
I rechecked the setups. Didn't have a signature box filled
in. So now I do.

No sense in repeating the one you quoted above. It's valid.

/Bill

try also CCRANE or perhapes SCANNERS UNLIMETED in SAN MATEO
CA or the city of BELLMONT CA im not sure if the second one has a web
site???
OR try looking up HAM RADIO OUTLET
there in OAKLAND CA i hopes this
is of use.THE best price wise i found is
scanners unlimeted.I bought the AOR 8000 for 589 on sale.THEY still have
a few in stock ,you cant get legally any more/???so price may be higher
now.

ARG THERE WATCHING MY EVERY MOVE........its such a nice day in the
neighborhood.watch out for little green men

My reading of the thread does not indicate that Mr Cheek represented himself as a WinRadio person....it was clear that he was a reseller to anyone who reads English.
I think it is amusing that those who claim to be most irritated by his posts are the ones who continue to keep the threads alive.
I am not a fan of Bill's style but I do find his posts informative when he is not responding to pathetic , self-righteous criticisms.
He loves this shit......and, apparently, so do many of his "detractors". You don't bite...he'll stop casting the bait.
If it keeps you blokes happy, no problems. I'll keep deleting the posts I do not want to read.

Brian (not a Cheek sycophant....just a seeker of information)

Positive reply:

If you don't know what you are doing (meaning ANYONE)... don't even
get anywhere NEAR the power lines!!!

Also, if you want to send low power RF into the power lines or the
telephone lines, it CAN be done with GREAT CAUTION and some
restrictions.

There have been some articles written about it years ago, and you
should consult THEM before trying anything experimental.

While I do not recommend this, you can couple RF into the power lines
through a wallsocket or by other means. You should use a series
capacitor of about 50 to 500 pF and it must be rated for about 1000
Working Volts or MORE. Start out with a silvered mica transmitting
capacitor, or a doorknob capacitor. Use a LOWER capacitance first,
since that is better and will block more of the AC power line
energy from being coupled into your trasmitter.

There are MANY CAUTIONS that need to be considered before embarking on
such a "current carrier" system. I would suggest surfing the Web and
looking for the words "current carrier" to get some kind of
instructional information - OR talk to someone who has done this
safely before (and lived to tell about it - grin!!)

>avoiding the facts of the matter.

Neither one is true. I been watching this ng ever since before Mr. Cheek ever first posted about 2 or 3 yrs ago. I lurk and hardly ever post. I watched even before Mr. Moss and you was here. Mr. Moss started a big flamewar and you helped out. I saw it.

>> body but if they act like jerks. He posts a lot of good subjects and then
>>guys
>> put him down. Its hard to understand. I meant he hasnt said any thing to
>>you
>> and you just put him down?

>I didn't put him down, I just stated a simple fact. He's said plenty
>to me in the past, but this is not about that.

Where and when did he say things to you? He ignores you and always has. At least that is what the recorded history of the ng shows. Is it wrong?

> It's about his deliberate deception regarding his relationship with WinRadio, and his
>insults of anyone who disagrees with his exaggerations, distortions,
>and his commercial spamming.

I dont see that like you do then. You are very emotional about it. Almost like you are a netcop or some thing. and you dont ever post on topic much. You seem to like fights and disagreements more than scanners. Do you have a scanner atall?

>>but, I been using Winradio for 3 months and its every thing he said it is.
>It
>> doent get interferance from the pc and I have no problem with it at all.
>jt
>
>I'm not knocking the radio.

Well thats good then. Do you have one too? .jt

VHF and UHF transmission is limited to "line of sight", if your in the
middle of a big city you wont pickup more than a few miles radius worth
of signals, RF dosen't travel well through steel reinforced concrete
buildings. Now, you go to the TOP of one of those structures and you'll
pick up 20 or 30 miles worth of signals, "Line of sight" remember?
If your out in the sub's, put a discone up on your house, it's a broad
band antanna and with it up on your roof, you'll do ok. but again, VHF
and UHF signals don't follow the curvature of the earth like signals
less than 30 Mhz do, They can be skipped, but thats not the point here.
Good luck.

>No. There was never any deception.

Don't lie. There most certainly was. You are trying to back your way out of it
now.

>If there were, I sure wouldn't have used my same old ISP.
>That's not real bright for deception purposes.

Don't give yourself so much credit. The fact is, you never even thought of
that.

>I did set up a separate instance of a newsreader to handle just the WiNRADiO issues so as
to be
>more efficient and focused.

Sounds like changing news readers was your only attempt at deception.

>As you may be aware, software setups can be complicated and lengthy and it took a while to
>get it the way I wanted it.

They're complicated if you don't know what the hell you're doing !

>I use Agent 1.5, the commercial version, and there are at least 22 menu tabbed screens of
>setups, some of which have multiple setups per. It takes a
>while.....like even a few days.

Then the problem is the user not the product. I am using the same product and it is NOT that complicated.

Stop making excuses, Bill. You are only fooling yourself.
It's pretty comical.

Remember....don't waste your time with cancel messages....they don't work on 95% of all the news servers out there.

AND, if I DO see one float across, I'll use it to get you booted.

What are you talking about? If you would research the law instead jacking off and smoking pot you'd find that no permit is needed in California. In fact the, the only law governing scanner use prohibits using a scanner to further the commission of a crime (i.e. avoid capture, know police positions, etc.). So, if you're not committing a crime and using a scanner to not get caught, you have nothing to worry about. Educate yourself instead of living in your haze you call consciousness.

I amazed that WiNRADiO would allow Mr. Cheek to continue to represent them. Certainly you don't see a company like ICOM presenting themselves in such an arrogant manner. It really makes you wonder what kind of service one can expect from WiNRADiO.

In rec.radio.cb Mike Curtis <mc847-87@mindspring.com> wrote:
: This thread is killing me. First let me tell my story and then the
: reasons why. About 2 months ago I decided to buy a computer
: controlled radio. I work at IBM as a network consultant so buying a
: computer controlled radio was a natural. I was going to feed the
: audio into a Real Audio server, and then write remote control software
: that would run over the net so I could listen to things even when on
: road trips.
: I was going to buy a WinRadio, in fact I had sent and received
: numerous emails from the company. I had also subscribed to Monitoring
: Times so that I could read the articles about enhancing the WinRadio
: which were written by Mr. Bill Cheek (the irony is killing me).
: I had to put my plans on hold because I became involved in a large
: project at work that took all of my free time away. Now fast forward
: to about a week ago... I fire up DejaNews to check out what is going
: on, and low and behold BOOM. A full scale war about WinRadio! I
: decide to sit back and watch what happens. As the posts continue to
: fly it soon becomes obvious that the person know as
: WiNRADiO@san.rr.com or WiNRADiO Sales USA is not the kind of person I
: want to deal with. The posts are filled with half-truths and personal
: attacks. Some things that really made me mad.
: First WiNRADio says that (this is directly from DejaNews):
: > As for the Icom PCR1000, it must be a very fine radio. Just
: > be forewarned that it runs from a computer's serial port. That
: > means two very important things:>
: >
: > 1. Slow. Very, very slow. Serial thruput is 115 kBps, tops.>
: >
: > 2. CPU load. The interrupts (IRQ) of a serial port will load down
: > the CPU ..... an issue very relevant to modern multitasking
: > and multithreading.
: >

: This is crap...
: 1. What do you think is sent between the radio and the computer.
: Even to build the spectrum scope you need very little information.
: All that is needed is a protocol that passes currnet frequency and
: signal strength. That is it. Even at 100 steps a second that amount
: of data seen at the interface is negligable.

: Lets build a our protocol. First we will use 2 bytes to signify the
: interger part of the frequency. Next use 2 bytes to signify the
: decimal part. Then use 1 byte for signal strength. Lastly use 1 byte
: for framing and error checking and we have a total of 6 bytes per
: packet (and this is a very inefficent protocol I might add). Even at
: 100 steps per second we end up with a total thruput of 600 bytes per
: second or 4800 bits per second. This is nothing for any computer
: built in the last 5 years.
: Haven't you ever used a modem and downloaded a highly compressable
: text file. A speed of 80-90 kbps is common. Under any modern
: computer/operating system the effect is about 6-8% CPU load. Barely
: noticeable.
: 2. The CPU load should be about 6%-8% for a download running in the
: 80-90 kbps range. This is of course dependent on CPU type/speed, but
: this is what I have seen on an Intel Pentium 120 (which is slow by
: modern standards).
: Next I see a post that says:
: > The ICOM PCR-1000 is no doubt a very good radio....and unparalleled
: > for mobile computer applications.
: >
: > But it still sneaks along at 20-ch/sec. WiNRADiO does 50.
: > WiNRADiO does not appreciably impact the CPU loading. A
: > serial port connection without an external microprocessor to
: > help things along will, most assuredly, load up the CPU.

: You know that the step rate has nothing to do with the interface.
: This is determined by the hardware.
: I won't event get in to the post on 10/21/97....

: To top the whole thing off I finally learn that WiNRADiO is none other
: than Bill Cheek.
: I now have second thoughts about buying a WinRadio and an looking into
: buying an ICOM PCR1000. I can hook up my HP Serial Interface Analyzer
: and hack the protocol when I get a chance. We will see that
: happens...
: Buy the way, I suggest everyone go to www.dejanews.com and do a search
: on winradio for a good laugh and a lesson in how not to sell or
: represent a product.
: Let the flanes begin......

I'm a London-based journalist and researcher working on a study of new communications technologies for a book to be published next year, and I'd like your help in analyzing the market for new kinds of cellular phones.

If you could answer a dozen multiple-choice questions, I'll make a donation to charity from my own pocket. The end of this email gives you a chance to choose a good cause you'd prefer the money to go to, and find out how much money was raised and where it went.

The research is based on the fact that several satellite consortiums are launching systems that will let you make calls from around the world with a hand-held satellite cellphone. I'm trying to gather on-the-ground, independent evidence on the preferences of technology-savvy consumers. (Don't worry, I'm not trying to sell you anything.)

To respond to the survey and raise some money for your preferred good cause, please reply to this email making sure you include the ENTIRE TEXT of this message (including the response keys, which are really important). Then go down to the dotted lines where the questions start, and answer the questions in the spaces provided. If you choose to add comments, you can should start typing inside the square parentheses and keep going until you have finished.

Important note: the response keys allow the software package to identify this survey. They are not used to associate your responses with your email address or to violate your privacy in any other way.

Thank you! Sorry to have bothered you if you prefer not to respond.

.....

The following line must be included in your response.
{####1.DRAFT SATELLITE SURVEY.0.0.1.0.0.2172####}

First, if you were able to buy a hand-held cellphone tomorrow that you could use all over the world to make calls via satellite, what might you pay for it?
[ ] No more than my current cellphone
[ ] Up to $100 more than my current cellphone
[ ] Up to $200 more
[ ] Up to $500 more
[ ] Up to $1,000 more than my current cellphone
You may add a comment inside the square brackets:
[ ]

Providers may charge a premium on top of standard international call rates for the convenience of being able to pull out a satellite cellphone instead of having to borrow someone else's phone or use a calling card. What would you be willing to pay for this 'convenience premium'?
[ ]No more than standard international direct-dial rates
[ ]Up to 20% more than standard international direct-dial (IDD) rates
[ ]Up to 50% more than IDD rates
[ ]Double the price of IDD rates
[ ]Three times the price of IDD rates
[ ]More than three times the price of IDD rates
You may add a comment inside the square brackets:
[ ]

As cellular networks spread over more of the world and phone companies do deal
s with each other, you may be able to take your standard cellphone to more places. Given the pricing preferences you've just expressed, how often you would have to use a satellite cellphone to feel you got good use out of it?
[ ]Once a week
[ ]Once a month
[ ]Once a quarter
[ ]Once a year
You may add a comment inside the square brackets:
[ ]

During the past year, how many times have you been away on a trip when you wanted to use your own cellphone, but could not because your cellphone provider didn't offer a roaming service there?
[ ] Never in the past year
[ ] Once or twice in the past year
[ ] Three or four times in the past year
[ ] More than four times in the past year
You may add a comment inside the square brackets:
[ ]

If you were travelling somewhere you couldn't use your own cellphone, what would offer you the best mix of price and convenience?
[ ] Using a calling card
[ ] Using a public, hotel or office phone
[ ] Renting a cellphone (with airport pickup and dropoff)
[ ] A satellite cellphone you brought with you
[ ] Your normal cellphone, equipped with a special card or chip
You may add a comment inside the square brackets:
[ ]

Because they can communicate over longer distances, satellite cellphones may offer lower performance than other cellular phones. One effect could be on handset size and weight. If a satellite cellphone was noticeably bigger and heavier than your current cellphone - say the equivalent of going back one generation to an older phone - how would that influence you?
[ ] Definitely would not buy it
[ ] Much less likely to buy it

[ ] A bit less likely to buy it
[ ] Would not influence my buying decision
You may add a comment inside the square brackets:
[ ]

Another effect is on battery life and sound quality. If the talk time and sound of a new satellite phone were both a bit worse than your current cellphone, how would that influence you?
[ ] Definitely would not buy it
[ ] Much less likely to buy it
[ ] A bit less likely to buy it
[ ] Would not influence buying decision
You may add a comment inside the square brackets:
[ ]

If a satellite phone was not reliable in cars, how would that influence you?
[ ] Definitely would not buy it
[ ] Much less likely to buy it
[ ] A bit less likely to buy it
[ ] Would not influence buying decision
You may add a comment inside the square brackets:
[ ]

If a satellite cellphone was not reliable inside metal and glass office buildings, how would that influence you?
[ ] Definitely would not buy it
[ ] Much less likely to buy it
[ ] A bit less likely to buy it
[ ] Would not influence buying decision
You may add a comment inside the square brackets:
[ ]

If a satellite cellphone was unreliable out of doors in built-up urban areas, how would that influence you?
[ ] Definitely would not buy it
[ ] Much less likely to buy it
[ ] A bit less likely to buy it
[ ] Would not influence buying decision
You may add a comment inside the square brackets:
[ ]

A growing number of people use cellphones to download email and browse the Web. Please check all of the following statements that apply to you.
[ ] I check email daily
[ ] I sometimes download email using a cellphone
[ ] When I next buy a cellphone, it will have to offer Internet access
[ ] A year from now, I expect to get more than 50 emails a day
[ ] Two years from now I expect to use my cellphone and PC to browse the web or a corporate intranet
You may add a comment inside the square brackets:
[ ]

Which of the following do you currently have or use regularly?
[ ] Cellphone
[ ] Notebook PC
[ ] Cellphone with GSM standard
[ ] Cellphone that fits shirt pocket (eg StarTac)
[ ] Nokia 9000 Communicator or similar
[ ] Palmtop PC with Internet access
You may add a comment inside the square brackets:
[ ]

What share of your cellphone costs do you pay from your own pocket?
[ ] None
[ ] Under 50%
[ ] 50% or over
[ ] All

Where do you live?
[ ] North America
[ ] Europe
[ ] Japan
[ ] Asia
[ ] South America
[ ] Africa
[ ] Other

I intend to donate $1 from my own pocket for every complete survey response received, up to a limit of $600. Which one of the following good causes would you like the $1 for your response to go to?
[ ] Terrence Higgins Trust: Helping people with AIDS and HIV
[ ] Shelter: Helping homeless people
[ ] Oxfam: Helping famine victims
[ ] Mencap: Helping handicapped children

Would you like to receive confirmation of the sums of money raised and the names and addresses of the treasurers of the organizations that acknowledged receipt? If so, please enter your email address here.
[ ]

Thank you very much for your response. This information will not be used for any other purpose, unless you choose to be notified when the research is published in book form. Would you like to be notified?
[ ] Yes
[ ] No

How so?
Is there a requirement that someone using the Internet use UNIX and/or
TCP/IP? I don't think so.
What was given was an excellent reason for not *banning* Morse code for
HAM use. But then, I don't see anyone trying to do that.

Larry, Here is a post I got when I was fixing mine, I never tryed it
but it may help.
Paul

Just read your post on the scanner newsgroup. I used to have one of
those
scanners when they were new. I had a book which the frequency to
binary
conversion. An actual chart if you will, of all the freqs the scanner
would receive. I live about 8 miles from TennElec which is in Oak
Ridge,
Tennessee (the Atomic City). They are now TennElec/Nucleus Inc. I
think
they are in the technical instrument field now but MAYBE since they
have
so many old employees still working there, there might be someone who
could get you a copy of the old manual from their archives or
something.
It's worth a try anyway. If you want to give them a call here's their
number: (423) 483-8405. You may need to explain that you're looking
for
info on an old item they made before they combined with Nucleus.
hopefully
they can direct you to the right person. I certainly hope this helps
you.
Let me know if you had any luck. By the way, they are probably open
from 9
to 5 EST. Best wishes,

Eddie Stair

Vertically mounted UHF TV antenna and THE VERY BEST COAX YOU CAN GET.

At 800/900mhz signal losses from coax will really eat up the signal.

The problem with this posting is that it publicly exposes the extremely poor
judgement of kb8poq(as well as the previous poster). The stupidity has
nothing to do with his political or legal beliefs. He simply is not
intelligent enough to recognize that his "contribution" has absolutely no
radio-related content. Or else he is so full of himself that he thinks
it appropriate to share his wisdom, no matter how irrelevant.

With a Pro 2046 I've been getting a 20 to 30 mile radius out of mine for local police and fire. Also have been picking up National Weather Service stations within a 100 mile radius.

The only problem I've had is mine fell off the car the first day I installed it. I reinstalled it and caulked around the base with silicone and haven't had a problem since. I don't think Radio Shack sells an adhesive reinstall kit for them, but most cellular service centers do for that type of antenna.

If you don't want a ring to form in your paint from a magnetic antenna installation, then the glass mount is a good way to go...

Greetings.

I have an AOR AR-2800 Wide Range Monitor I am offering for sale.

I have the original box, manual, antenna, power supply, mobile mounting bracket, receipt.

Unit is in excellent condition, used only briefly a couple of years ago and in storage ever since.

Covers 500KHz to 600MHz and 800Mhz to 1.3GHz (Continuous coverage except 600-799.995 MHz, UHF TV dead zone!)

Stores frequencies in 1000 channels, non-volatile memory
Ultra fast scanning
AM, Narrow FM, Wide FM, SSB.
Backlit display
$350 or best offer. I will ship it anywhere in the contiguous 48 states for free, elsewhere for nominal extra.

I find kids can learn pretty much anything. My 3.5 year old son constantly amazes me what he can do with the computer I gave him a year and a half ago. He started out with no knowledge -- today, he can turn on the computer, boot Windows 95, insert the games he wants to play into the CDROM drive, clicks on the desktop icon, plays the game, and finally clicks on Start -> Shutdown -> Yes to turn the computer off.

All this, mind you, with little to no input from me. Occasionally he runs into a problem he can't solve, but eventually finds his way around it (for instance, he figured out how to clear a CDROM error message from the screen all by himself.)

>The only people who want morse code are the
>"old men who hate children".

Oh yes, absolutely. Now that its getting close to Halloween, there must be a run on razor blades. I'm sure all these old men are sticking them in poison apples.

>Where would the computer industry be today if
>we had to learn binary code to obtain a "license" to
>operate a computer.

Probably a lot better off. For instance, give someone a computer and a modem, and they instantly become an "expert" on the Internet. Not.

CARMA November 1997 Newsletter, Part 2 of 4

Lincoln Home National Historic Site:
(Kevin O'Rourke)
While visiting the Lincoln Home National Historic Site in Springfield (operated by the National Park Service), I found 169.650 to be their primary operations frequency. Sounds like either simplex or repeater input. If this is an input, I did not find a repeater. The callsign sounded something like KO9313. "VC" is the Visitor Center. They probably have access to other frequencies (local public safety?), as the rangers carry either 16- or 99-channel VHF MT1000 radios. I did not hear reference to any other channels while there, and all traffic I heard coming from their radios was indeed on 169.650.

Tri-Com Ch.5?
(Jerry Smith)

There was some activity in St. Charles today. Dispatch took place on Ch 1, which is 470.9375. To keep Ch 1 available for normal dispatch, St. Charles switched to Ch 3, which is 470.6125. During the incident, one of the officers asked another unit to switch to Ch 5. Is anyone aware of a new freq for Tri-Com which would be designated Ch 5?

CPD Portable Data Terminals:
(Ted Moran)

Here is an updated listing of the Chicago Police Depts portable data terminal radio frequencies. These are the system outputs, inputs are 45 Mhz lower. There are thought to be at least two other system frequencies in addition to what is shown below. These transmitters are not heard very well outside of the city. Its thought that the popular MDT software will not read this data, though hope remains for the future. Chicago is utilizing a dual-dispatch (voice on 460 Mhz / data on 800 Mhz) format, so you can keep listening to 'da zone-

856.9375, 856.9625, 866.1875, 866.2125, 866.3375, 866.5625, 866.5875,
866.6750, 866.8125, 867.1000, 867.1750, 867.5375, 867.6375, 867.6500,
867.7375, 867.7625, 868.1000, 868.2250, 868.3000, 868.3250, 868.3500,
868.5750, 868.6750, 868.7250,
868.8000, 868.8250,

Chicago has divorced 9-1-1 operations from the Police Dpartment. 9-1-1 is now a seperate agency from the Police Department. Also at Chicago 9-1-1, a license for 155.055, the IREACH channel has been requested.

CARMA November 1997 Newsletter, Part 3 of 4

New Toys:
(Ted Moran)

ICOM's much touted PCR-1000 computer controlled black box radio has yet to be shipped to customers. ICOM has stated that they will not release the signalling protocols used by the unit, so until the format is hacked don't count on any availability of after market software to run the unit. ICOM will ship software with the unit and while very jazzy looking on the screen, it doesn't appear to do anything that can't already be done with other computer control systems, or even with higher end base and handheld scanners. The unit employs an RS-232 connection to your computer, so it's operating speed will be limited to those specs and speeds, as opposed to internal, bus connected devices like the Winradio card. (Radio guru Bill Cheek has been publishing an excellent series of support articles for the Winradio unit in MT). This could be ICOM's biggest marketing fumble since the image plagued R-1 handheld scanner.

Watch for Regency to introduce a base version of their excellent handheld scanner. It should incorporate the same CTCSS/DPL receive features and excellent selectivity displayed by the handheld unit. No date has been set for commercial release of the radio.

The 1998 Police Call should be available at your local Radio Shack on or about December 1, if it isn't banned by then...

The 4th Quarter 1997 Regional CD's are now available from Percon. Call (716) 386-6015 or E-Mail: orders@perconcorp.com for more info. These CD's include the complete record for each licensee in the area.

Icom R10 Modifications
(Via Mark J. Thompson)

You can find great info, mods, and links for the Icom R10 at:
http://www.flash.net/~baptpdc/r10.htm.

Please note that the more recent R10's can not be modified due to a printed circuit board revision to prevent the cell phone frequencies to be restored. I do not know what serial numbers the change started with.

For those that I have heard complain about the R10 for its shortwave performance, the answer is simple. A rubber duck was never meant for shortwave. You must use a extendable whip antenna that is NOT coil loaded. The longer the better. Manufactures for handhelds have two choice's. Make the hand held hot with a short antenna but suffer intermod and overload problems on a longer antenna, give reasonable performance for a short

antenna that gives cleaner reception AND works well on a longer antenna
with out overload. I for one prefer the cleaner option.......

Loggings:
154.190 107.2 Muskegon, MI Fire repeater
153.590 107.2 radio test: TSC, Control Room, Suitcase Radio 2, Morrison EOF

Your item about RED Center (in the September 1997 CARMA Newsletter) was interesting. We were somewhat surprised to hear that Dodge County is causing them problems. Just to clarify, Dodge County does not have a

repeater on 154.445. This freq is used only by simplex bases for paging. There are no mobile operations here. Tone is 141.3. Perhaps they are hearing the Elkhorn FD repeater (154.445/154.070 107.2, 2600 series units).

Milwaukee County TRS update
(Gary R. Hahn)

Here's the latest update for Milwaukee County. The Sheriff has been slowly migrating on to the system. The airport deputies are no longer heard on the old 154.785 freq. There are still some vehicles which have not been converted yet, as evidenced by a single unit ID showing up on trunker.exe for multiple cars. Some of the TGs showing up are still a bit confusing there with odd numbered TGs showing up.

Chicago O'Hare Airport (ORD)Notes:
(Ted Moran)

The new tower channel of 127.925 remains active. 126.900 may eventually return so don't count it out yet. Another trunked system is operating for airline services at the field: 856-860.1125. Add 859.7125 and 860.7125 to the 856-860.7625 City Trunked System at the terminal, as earlier reported. A data system with a format very similar to ACARS was heard on the mobile input frequency 811.8625. (Its output is on 856.8625 - who / what is this???).

There are many, many users of 800 Mhz systems, both trunked and conventional at the field. A useful technique to employ when visiting the airport is to search the mobile inputs from 806.0125 -to- 820.9875, 25 Khz steps on the "odd" channels. Below is a listing of recently confirmed mobile input frequencies, add 45 Mhz to each to get the system output channel. This is by no means complete, just a sample:

810.9375, 810.0875, 814.0875, 815.5375, 814.7625, 811.0375, 812.0375,
806.5875, 808.4875, 806.4875, 807.3125, 815.6125,
810.3625, 814.7125, 818.6625, 818.2125, 818.2125 (data)
It may be helpful to remember that one finds mostly conventional repeaters between 851.0125-855.9875 Mhz, a mix of conventional and trunked between 856.0125-860.9875 Mhz, and primarily only trunked system between 861.0125-865.9875 Mhz. Most trunked systems at Ohare are Motorola systems and they respond well to Trunk Tracking.

End Part 3

2507. Family Radio Service

Newsgroup: rec.radio.scanner
Date: 1997-10-27 00:00:00 UTC
From: In Phase <in_phase@NOSPAMjuno.com>
Message-ID: <34555FC5.2A05@NOSPAMjuno.com>
Source record: 182008
Cross-posted to: alt.radio.scanner,rec.radio.scanner

Finally!! An answer to a question I posted a few days ago,
and a few other people too.

From the 3rd Quarter/October 1997 issue of "Blacklisted! 411" magazine.
(thanks guys!!)

Frequencies for the Family Radio Service (FRS).
Channel 1: 462.5626 Mhz
Channel 2: 462.5875
Channel 3: 462.6125
Channel 4: 462.6375
Channel 5: 462.6625
Channel 6: 462.6875
Channel 7: 462.7125
Channel 8: 467.5625 Mhz
Channel 9: 467.5875
Channel 10: 467.6125
Channel 11: 467.6375
Channel 12: 467.6625
Channel 13: 467.6875
Channel 14: 467.7125

FRS uses FM with a peak deviation of +/- 2.5 khz.
Maximum power is 500mw. Channels 1-7 are shared with
General Mobile Radio Service (GMRS).

CARMA November 1997 Newsletter, Part 1 of 4

CARMA
The Chicago Area Radio Monitoring Association
November 1997 Newsletter

CARMA Web Page:
http://www.theramp.net/shabec/carma.htm

BBS: (630) 852-1292

Editor:
Rich Carlson, N9JIG (N9JIG@TheRamp.Net)
PO Box 514
Winnetka IL 60093

Associate Editors:

Roy Bond (Roypb@AOL.Com)
PO Box 73
River Grove IL 60171

Fred Shabec (Shabec@TheRamp.Net)
1753 W. Irving Park Rd., #D-121
Itasca IL 60143

Internet E-Mail subscriptions to CARMA's Newsletter are free. Send an E-Mail message to: N9JIG@TheRamp.Net

Printed/mailed versions are $15.00 per year (6 issues) mailed first class. Send checks made payable to "Kim Moran" to:

CARMA
PO Box 514
Winnetka IL 60093

Meetings:

The next CARMA Meeting will be at Phillies Restaurant, 63rd & Kingery Hwy (just west of Dominicks) in Willowbrook on

December 6th, 1997.

Arrive between 11:00 AM and Noon, and finish your meal by 1:00 PM, so we can have the least disruptions during the actual meeting. Remember that you will need to purchase your meal so we can get the room for free. 1998 meeting dates are:

Febuary 7
April 4
June 6
August 1
October 3
December 5

Picnic:
July 12

Editor's Job Open!

Can you write complete sentences?
Can you spell reasonably well, or use a good spell checker?
Do you have a computer and Internet access?
Can you devote a couple hours a month to gather useful information from varied sources?
Are you well versed in scanner topics?

If you answered Yes to these questions, then you may be the next editor of the CARMA Newsletter. You would be expected to deliver 9 written pages, (the tenth is the mailing cover). I will spend as much time as needed to get your first few issues out successfully. The new Editor needs to be approved by the CARMA Board, and would also become a full member of the Board if not already.

Ted Moran and myself have written the CARMA Newsletter since 1988, and it is time for a change. Ted and I have been responsible for a majority of the content when membership contributions have been thin, and have subsidized the Newsletter out of our pockets as needed. It is time for a change.

The new editor will have an easier time than we had. the new format is easy to prepare and distribute. You would have to provide a single printed version and we will see that it gets copied and mailed to the few remaining mail subscribers. I will assist you in setting up the E-Mail system, and forward any new subscriptions requests.

If you are interested, send me or any other Board Member an E-Mail or letter outlining your qualifications, and we will make our decision as soon as possible.

Special Report:

SCANNER WARS, Part 3
(Restriction of the Repair Manual)

As I write this in late October, the newest debate is about the Service Manuals for our radios. I will allow Andy Barber, (andyb@QNI.COM) who writes the Kansas Column on Scan-L and rec.radio.scanner to explain. He has been monitoring since 1969 (before true scanners were around) and is a dispatcher for the Lenexa Kansas Police Dept. Lenexa is the cultural center of North America :-)

Right out of the chute I want to say that the following is simply a "Reader's Digest" version of the conversations I had with various entities. I am not saying that I necessarily agree or disagree with any of them. FWIW, all of the persons I spoke with were very polite and helpful. No one was antagonistic.

Having heard about all the hoop-lah about "illegal" service manuals from Radio Shack, I went to the local RS store (where the manager knows me) and asked to purchase the manual for a PRO-2006. He said that the FCC had made it illegal to sell repair manuals for any scanner that receives 800 MHz or above. I told him I worked for a police department (which I do) and it was for our shop, not for personal use. He still said they were "illegal." I didn't argue with him because he is a good guy.

I went home and called the RS repair shop in our city, and spoke with the tech that works on scanners. He said the same thing, that they were "illegal." He claimed that even if THEY lose one, a new one must be hand carried to them by someone from Ft. Worth. Again, I didn't argue because he is just relaying what he knows he doesn't make policy.

Next call was to the FCC in Gettysburg. Spoke with a gentleman there who said in a nutshell, that it is perfectly legal to sell repair manuals.The FCC guy did offer to send an e-mail with all the rules and regulations concerning modifying/monitoring scanners for cell phones reception, etc.I agreed and he did. Nothing new in what he sent to me.

Then I called the RS district manager's office. He was out, so I asked for the phone number to merchandising in FT. Worth. Called that number and asked for the buyer in charge of communications equipment. A man named Wayne Wilson answered. He was indeed the buyer for scanners and related equipment for Radio Shack. I explained my reason for calling and about the previous calls I made in regards to the situation.

Mr. Wilson gave a sort of muffled laugh mixed with a slight groan when he found out what I wanted. He explained that he has fielded a number of calls about this, most of them beating up Radio Shack for being an evil, cold-hearted company that had no regards for its customers.

He did admit that the FCC had requested (not demanded) that they not sell repair manuals for scanners that receive 800 or above. The company,along with Uniden, agreed to keep the manuals away from the consumer. The reason they agreed is coming up soon, but he wanted to be sure I understood the next point. Mr. Wilson told me that Uniden, who agreed with the FCC, has never sold their repair manuals in the past. Radio Shack has always sold theirs before, and still does for anything other than the mentioned scanners. Uniden still doesn't. Why RS has become the sole target forsuch abuse is of concern to him, since Uniden has always had that policy and people don't seem to mind that fact.

(Other reports indicat that Uniden does indeed sell service manuals for scanners. ed.)

Wayne explained that he is a ham, and enjoys listening to scanners, too. He was physically in Washington DC as a Tandy representative

fightingthe various "scanner banning" bills. Tandy is on our side, but they area for-profit organization, and they must watch out for their interests, too. Due to that fact, they caved in to pressure from the FCC and stopped making the manuals available. Here is why:

In a nutshell, the FCC (the government) can make things rough for people.If you don't do what they say you pay the price. We came up with a simple analogy to explain the phenomenon: if you are walking down the street, minding your own business, and a cop stops you and asks for your ID, you don't have to comply. But you will have to suffer the consequences of your actions, right or wrong as they may be. The officer has many ways of "putting pressure" on you. (I am not condoning those methods, legal or illegal, just a statement of fact.) Same with the federal government.

Wayne said that he (Tandy) wants to continue to sell scanners. He doesn't want them to disappear from the market place, for personal and business reasons. If further regulations were put in place that restricted what a scanner could receive, eventually sales would drop to a point where it was no longer profitable to manufacture/sell them and they would cease to exist.

If that happened, he said, the only way to monitor would be to purchase a multi-thousand dollar commercial radio and have someone program it with the transmit disabled, if you could get someone to do that for you. Anyway, Tandy agreed to the restricted sales to satiate the FCC and to perhaps keep them off our backs for a while. It appears that Radio Shack was between the proverbial rock and a hard spot, and elected this option.

The following are my thoughts, not that of Tandy or Mr. Wilson: We have here a classic example of a non-legislative body making laws. The FCC has no control over the sale of these manuals, but the pressure they can bear on people makes it nearly impossible not to do what they want. So in reality, they DO have control over the sale of the manuals. This kind of thing is happening with startling regularity in other parts of our live, too. We have courts that delcare that election out-comes on various social matters are wrong, and throw out the will of the people and force the will of the court upon the voters. They don't make laws in the sense that a legislature does, but they still get their way. I guess that in a round-about way, the FCC has made the manuals essentially "illegal."

See Larry Van Horn's December 1997 "Communications" Column in Monitoring Times for more information on this important issue.

J.T. Ward, of Popular Communications has also been active on this matter, and I am sure he will have plenty to say in Pop-Com.

Also, check the various scanner newsgroups and SCAN-L for the latest rumors, news and gossip.

Public Safety News:

Yikes! It's been a while since I ordered any...maybe a year
or two. They were $10 plus shipping at that time. Gawd,
they must be proud of them now. What a rip!

I am still looking for a replacement. I kind of think a
thin frosted glass or acetate slide with LEDs or tiny
incandescents behind it would work pretty good.

I have the following equipment for sale...

(2) RCI-1000 VHF HANDHELD TRANSCEIVERS $100.00 (for set)
Made by Ranger Communications, Inc.
2 channel operation (154.600 & 154.570 Mhz)
Range is approx. 2 miles (depending on area)
Units are in good operating condition
Cosmetics are in good shape
Units come complete with stand up chargers
Sorry, no owner/operator manuals

UNIDEN PC 66 (75 Channels) $80.00
Freq. range 26.965--27.795MHz with freq. chart for easy channel location
Roger beep on PA/CB switch
Female having orgasm (Noice toy)
Tuned & peaked for max peformance++Power--4 modulating to 17 watts
Unit works and sounds great
Cosmetics are in good shape
Complete with new microphone, new power cord,
and new after market mounting bracket
Sorry, no owner/operator manual

Fluke 8600A digital multimeter $45.00
Test-- AC, DC, Ohms, up to 1200 volts
5 digit L.E.D. readout.
Pushbutton function controls.
Supplied with:
New power cord
Test leads
Owner/operator manual
Cosmetics (case) is in fair condition.
Good operating condition
Note: DC volt reading, reads approx. 1 volt higher
than actual received voltage.

All prices are firm and units will be shipped at my expense
in the USA only. I will ship COD at your expense.

Interested?? Contact PANTH18251@aol.com
Thank you...

Go out and get you a Diamond CR-627B tri-band amateur antenna. It's designed to cover 50 mHz, 144 mHz, and 440 mHz and does a super job as a good all around scanner antenna. The downside is it won't be cheap, costing around $160 or so including a suitable mount.

From: jng2000@aol.com
Message-ID: <19971027014500.UAA28966@ladder02.news.aol.com>
Source record: 182025

I know they display frequencys. Do they only work if you are right next to the trasmitting source. Say I was in a gym and there were 3 handhelds being used on 1 frq. If I had a handhel frq counter would it tell me there frq when one of the transmitted. Could it tell me there PL. Thanks for helping me.

2521. Freq's needed

2522. Wierdness on new LAPD Freq...

Newsgroup: rec.radio.scanner
Date: 1997-10-27 00:00:00 UTC
From: corbin@physics.ucla.edu
Message-ID: <630s54$1rvs@uni.library.ucla.edu>
Source record: 182027

Was listening this evening when my scanner stopped on 507.0125 -
and what should I hear, but stations ID'ing as "Brother Mark",
"Brother Gilbert", etc and a lot of conversation in what I'm
guessing is Tagaglog (I probably butchered the spelling 8*( )
It sounds like these may be church vans --- what the #$#% are
they doing here?!?

For what it's worth, they seem to be using a different PL
than LAPD and digital bursts rather than modat tones...
I heard a couple scrambled transmissions at the start of all
this that I now suspect may have been an officer in the field
wondering what the hell was happening (didn't get to check the PL
on the scrambled TX).

I understand that in just the last week or so the FCC pulled
the protection for public-safety liscensee's in the T-Band,
and that at least one company is going around trying to use some
loophole to obtain liscenses for many public-safety freqs in
the greater LA, with plans to put KW repeaters and 200W mobiles
on 'em... Am I witnessing the evil consequences of that
endeavor?

If this is a hint of what's in store, we're in big trouble...
My understanding is that applications have gone out for frequencies
that are the primary PD freqs, primary FD freqs and even public
works freqs in many of the smaller towns around LA ---- and just
in time for El Nino... 8*(

I went search for ScanFan books on Sat 10/25/97.

I Saw two at Gateway Electronics, Inc., 9222 Chesapeake Drive, San Diego, CA, 92123, PH 619.279.6802.

Western Radio Electronics, 4797 Ruffner Street, San Diego, CA 92111, PH 800-777-4WRE, was not open.

The Mud Shack on El Cajon blvd, has zero in stock, and says ScanFan Publications should be publishing in about 3 months--in paper vice CD-ROM.

Grove Enterprises, POBox 98, 7540 Hwy 64 WestBrasstown, NC 28902-0098, PH 800,438.8155, Has FCC-96 on High Density disc or CD-rom by state available for $50+$4s&h.

I hope this helps.

Source record: 182031

Jack:

Coax cable has loss, and especially RG58 cable! Your higher frequencies will suffer the most. And the longer the cable, the greater the loss. As you go to greater heights to increase your reception, you start losing what you've gained, in signal loss due to cable lengths.

Try using a good quality RG6 cable, it has less loss at the higher frequencies than RG58. Some will tell you that RG6 does not match the 50 ohm impedance that your scanner is designed for, (RG6 is 75 ohm), but on receivers, this is not as important as when transmitting. If you want to go all out, Belden makes a low loss RG8 style coax, but it's expensive, about 1/2" dia., and harder to work with, because it somewhat more rigid.

Bill Crocker

This thread is killing me. First let me tell my story and then the reasons why. About 2 months ago I decided to buy a computer controlled radio. I work at IBM as a network consultant so buying a computer controlled radio was a natural. I was going to feed the audio into a Real Audio server, and then write remote control software that would run over the net so I could listen to things even when on road trips.
I was going to buy a WinRadio, in fact I had sent and received numerous emails from the company. I had also subscribed to Monitoring Times so that I could read the articles about enhancing the WinRadio which were written by Mr. Bill Cheek (the irony is killing me).
I had to put my plans on hold because I became involved in a large project at work that took all of my free time away. Now fast forward to about a week ago... I fire up DejaNews to check out what is going on, and low and behold BOOM. A full scale war about WinRadio! I decide to sit back and watch what happens. As the posts continue to fly it soon becomes obvious that the person know as WiNRADiO@san.rr.com or WiNRADiO Sales USA is not the kind of person I want to deal with. The posts are filled with half-truths and personal attacks. Some things that really made me mad.
First WiNRADio says that (this is directly from DejaNews):
> As for the Icom PCR1000, it must be a very fine radio. Just
> be forewarned that it runs from a computer's serial port. That
> means two very important things:>
>
> 1. Slow. Very, very slow. Serial thruput is 115 kBps, tops.>
>
> 2. CPU load. The interrupts (IRQ) of a serial port will load down
> the CPU ..... an issue very relevant to modern multitasking
> and multithreading.
>

This is crap...
1. What do you think is sent between the radio and the computer. Even to build the spectrum scope you need very little information. All that is needed is a protocol that passes currnet frequency and signal strength. That is it. Even at 100 steps a second that amount of data seen at the interface is negligable.
Lets build a our protocol. First we will use 2 bytes to signify the interger part of the frequency. Next use 2 bytes to signify the decimal part. Then use 1 byte for signal strength. Lastly use 1 byte for framing and error checking and we have a total of 6 bytes per packet (and this is a very inefficent protocol I might add). Even at

100 steps per second we end up with a total thruput of 600 bytes per second or 4800 bits per second. This is nothing for any computer built in the last 5 years.
Haven't you ever used a modem and downloaded a highly compressable text file. A speed of 80-90 kbps is common. Under any modern computer/operating system the effect is about 6-8% CPU load. Barely noticeable.
2. The CPU load should be about 6%-8% for a download running in the 80-90 kbps range. This is of course dependent on CPU type/speed, but this is what I have seen on an Intel Pentium 120 (which is slow by modern standards).
Next I see a post that says:
> The ICOM PCR-1000 is no doubt a very good radio....and unparalleled
> for mobile computer applications.
>
> But it still sneaks along at 20-ch/sec. WiNRADiO does 50.
> WiNRADiO does not appreciably impact the CPU loading. A
> serial port connection without an external microprocessor to
> help things along will, most assuredly, load up the CPU.

You know that the step rate has nothing to do with the interface. This is determined by the hardware.
I won't event get in to the post on 10/21/97....

To top the whole thing off I finally learn that WiNRADiO is none other than Bill Cheek.
I now have second thoughts about buying a WinRadio and an looking into buying an ICOM PCR1000. I can hook up my HP Serial Interface Analyzer and hack the protocol when I get a chance. We will see that happens...
Buy the way, I suggest everyone go to www.dejanews.com and do a search on winradio for a good laugh and a lesson in how not to sell or represent a product.
Let the flanes begin......

William,

I believe Bill signed the promotion post(s) "WiNRADiO Sales U.S.A. To the best of my knowledge, all he is doing is selling them. He does not make them, they are manufactured by an Australian firm. I believe Bill also offers some modifications for them but he is not a WiNRADiO representative nor did it appear to me that he tried to pass himself off as one. Nowhere have I seen WiNRADiO endorsing Bill or his "tactics." If you have a personal problem with Bill, why don't you take it up with him and quit slamming the product and the manufacturer. Bill has broad shoulders and a thick skin and I think he made it quite clear that he was speaking for himself. You have directly implied that WiNRADiO is not a reputable company and they may choose to differ with you. I would choose my words more carefully if I were you.

If you havent done so already now is the time to stop bitching and moaning about the Feds and start writing your congressman and the local papers about HR 2369 which will be in commitee this week.

In one fell swoop HR 2369 will turn scanning on it's ear if we allow this thing to pass. No new scanners will be sold because no manufacture is going to risk the $500,000 fine for selling any scanner in the U.S. that was used to pickup and of the new frequencies that are about to be banned.

That means no more listening to the Cops and no more listening to the NASCAR teams. For just one hour put aside your complaining about Bill Cheek and all the other petty flame wars that go on here and write your local paper and your U.S. house Rep.

Every single day I run into folks that have police scanners and are unaware of the pending legislation that will make them all illegal. We can make a difference if we get the press involved because all the papers also need scanners to run down the hot stories. Spread the word we must act fast.

You can find out more info at

I have an ICOM R10....
To get the full potential I would llike to take the audio directly from
the discriminator...
Can anyone provide me with directions on doing this...
Would like to be able to decode POCSAG, DTMF etc.... And I need the
Discriminator audio.

Thanks,

jg@izap.com

Ok, I have a Pro-60 in excellent condition with box and manual. For those of you who do not know, this is a triple conversion 200 channel hand-held from RS which sold for $379.95 in last years catalog.

Covers the following freqs:

30-512 MHz
760-824 MHz
849-869 MHz
894-999.9875 MHz

I am buying a trunk-traker and do not need 2 hand-helds. E-mail me an offer. Thanks.

Message-ID: <19971027112001.GAA00940@ladder02.news.aol.com>
Source record: 182051

AOR 8000
less than a month old; excellent condition
includes original box and packaging
has full 800 MHz coverage
asking price $450 (cannot go any lower!)
Please contact me by e-mail. I will accept postal money orders or bank cashier's cheques. I will include shipping to anywhere in U.S. If you are from any other country, I might charge for additional postage. The scanner works great, it's just that I am upgrading to a Yupiteru MVT-9000.

>Anyone have any thoughts contrasting Csp-Tech's ScanerBase vs Percon's
>Spectrum database? They seem to contain the same database of frequencies
>and pricing is virtually identical.

This question came up about a month ago and what the general consensus was, I don't know for sure. You can try a demo on the ScannerBase product (www.csp-tech.com, I think) as well as get info at www.perconcorp.com. The ScannerBase product has a nice database engine--far better than the Percon product. The main problem is that you cannot export the result of your searches to a file that can then be used by Probe or some other scanner program. Without that capability, the product is useless to anyone who runs their scanner by computer.

Marc, for your situation, you need to find an antenna that is "Ground Independant" which by the name means it does not require any gounding. They are fairly common so it shouldn't be too hard to find.

If you are over 18 years old, Male, and (legally required to) have filed with the Selective Service (DRAFT) Board, then you :) are a member of the United States of America's unregulated militia (small 'm' intentional) and as such are given under the Second Amendment the right to bear arms. This principle of an unregulated militia dates back to the colonial days when men were called to arms to defend their rights against the British (who were against colonist owning weapons). If you are interested in where this is in your laws, check out the U.S. Civil Code.

Dear Jay,

Replace the coax - it's probably become defective in some subtle way.
It doesn't take much of a problem at that frequency. Could have been
struch by lightning - that would do it. While you're at it, use RG-8
or RG-213 instead of RG-58.

You realize what ELF is, don't you? No scanner I know of can pick it
up. In fact, ELF is below the power line frequency of 60 Hz. It is
possible to receive such things. However, the information is
digitally coded and compressed for very narrow band transmission.
Only intelligence services which have knowledge of the codes could
possibly be interested.

Would you have any idea of the value of a Pro 2026 scanner, unblocked, in good shape, with the manual, box, and cigarette lighter cable?

Thanx, Bob

2563. Service Manuals Available Again !!

Newsgroup: rec.radio.scanner

In early October, I set certain wheels into motion that
today apparently resulted in Radio Shack rescinding their
policy of no sales of VHF-UHF scanner service manuals.

I look for Radio Shack to either make this announcement
publicly this week, or otherwise to just quietly resume
sales of scanner service manuals as if nothing had happened.
Either way, we don't care.

Therefore, if you have trouble getting a service manual
after a day or two, please contact me personally by e-mail
and I will try to help smooth the issue.

One small victory.....one small step.....

I think the price is around about 20-bucks now......$$$$$
If your Pro2006 is an early one with the DIM function only,
you can modify it to turn off like the later ones with the LIGHT
button. Just remove surface-mt resistor R-505, 47ohm.
You need to remove the shield from the logic board to get at it.
It will then only light when you push the button in, the
DIM position just like the Later model.

I called my Congress-person's office yesterday. Her aide told me that the congressperson did not have a position on HR 2369, and if the congressperson did have a position, she would certainly NOT make it publicly known.

Your government at work.

I talked to one of my Senator's aids, and he was stunned that I was told such a statement.

Has anyone else had a similar experience?

Hi... just a quick question (hopefully)

with the uniden ubc3000xlt... is it ok to leave the power plugged in
when you're not using it? or, should you really... charge for 16 hours,
use until flat, charge for 16... use until flat?

Is it designed so you can just leave it plugged in permanently?

Jamie

2579. ICOM R-8500 CI-V/232 protocol docs?

Newsgroup: rec.radio.scanner
Date: 1997-10-28 00:00:00 UTC
From: bokonon@cad.gatech.edu
Message-ID: <635m54$h6n$1@gypsy.cad.gatech.edu>
Source record: 181885

Does anyone know where I could find decent documentation on the CI-V protocol used with the ICOM R-8500? The documentation in the R-8500 manual is amazingly brief and almost, but not quite, useful .....

Specific information that would be useful is how to pinout an RS-232 cable to talk with an ICOM R-8500 through a standard PC serial connection, first off ..... any help with the actual protocol would also help, since I see messages, responses, ACKs, NAKs, and glibly uninformative blurbs about data content in the one page of documentation I do have from the rear of the manual.

Thanks in advance to anyone who can help .....

As of yesterday, it hadn't filtered down to the store level
droid yet. I ventured into a local shack to purchase a LM317
regulator (and a few other items totaling $6.00) and while
the droid was scanning up the items for mr "No Name", I asked
him if RS had reversed their decision on selling scanner service
manuals "yet". He didn't know, and suggested that the other clerk
(possibly the manager) might know... but since he was involved in
a chat with someone else and I was in a hurry, I didn't bother to
ask him too. (I didn't have the time to search for the part number
and have the clerk try to enter it.)

> Does anyone know if the Pro-2004 squelch circuit is similar to the
> Pro-2006 do thay both revolove around IC 2 TK10420 ?

They are nearly identical and yes, the TK10420 is common to
both. The PRO-2006 employs a revolutionary idea to
customize the squelch hysteresis that I've not seen
elsewhere.

The squelch circuit is identical to that of the PRO-2005 and
PRO-2004 as well as that of many other Radio Shack scanners,
except that a single CMOS Bilateral switch triggered by the
receiver MUTE function is in series with the squelch
hysteresis resistor between pins 12 & 14 of the TK10420. In
effect, the switch closes as soon as a signal is present.

This puts a low impedance in the hysteresis circuit, making
the squelch very loose, When the signal goes away and
squelch sets, then the switch opens, raising the hysteresis
impedance to make the squelch extremely tight.

This idea eliminates squelch "motorboating" by keeping the
squelch open, even when weak signals fluctuate, and yet lets
the squelch be closed when it is supposed to and still open
at the slightest provocation.

Oh gee, I guess she expects to retire from office soon? =)

> I talked to one of my Senator's aids, and he was stunned that I was told
> such a statement.

What did your senator have to say on the matter? And also, which
state is this?

> Has anyone else had a similar experience?

These experiences tend to be common for me whenever I ask
legislators about bills involving technology. A lot of them just have no
idea what the hell these bills are all about. The same with the
Communications Decency Act. From what I understand, the bill's sponsor
hadn't ever logged into an internet account before he chose to label it
as a smut-filled wasteland.

Get any lobbyist, radio manufacturer, or member of an
organization that will remain nameless (CTIA *ahem*) to feed these people
a few "facts," and they'll believe whatever they say.

Depends. It could be a handshake channel for a trunked system.
Or, if your local department hasn't gone trunked, it could either be a
Motorola SecureNet transmission, or MDT (Mobile Data Terminal) packets.

A frequency counter could tell you this, but you would have to be
rather close to one of them when they're transmitting to get an accurate
reading.

> Could it tell me there PL.

It probably won't be able to tell you their PL.

I guess you my be right. I got caught again. This time I was monitoring a sting operation from my car. I saw the guy they were following, and thought it would be a real haha to warn the guy. So I pulled around the corner and walked back to talk to him. As I passed by I said "the police are following you". He stopped and said "I am the police".
I guess I got the wrong guy. I guess he was one of the guys doing the following.

He recognized my from a photo I guess they have of me in their department and wrote me a ticket so I have to appear in court again.

I am so glad he couldn't take my radio away again, because I left it in the car.

Any way I'm going to rethink this sting operation thing.
Anyone got any good Ideas?

If you have to use bare bones equipment, you've broken the number one rule:
you weren't prepared. I have a 5w HT, a TNC and an Radio Shack model 100
that I keep charged up just in case. The whole station fits in a bag, and
gives me reasonable ability to communicate in case of power outtages. I
would much rather have a decent HT with batteries than rely on some
cobbled-together spark gap CW rig.

Feeling above me does not make it so. I don't feel "above" anyone.
We're all pretty much equals in the anarchy known as UseNet. Our
writing speaks for itself.

> feel. It doesnt seem possible to discuss anything with you if there is a
> difference of opinion. Youre always right and the other guy is always wrong.

That is incorrect. I have supported Cheek on some occasions when I
felt he was right. Of course, I do generally shy away from "me too"
type comments. They're boring. Disagreement is what fuels thought
and interesting discussion. You seldom learn anything from a
conversation where everybody agrees on everything.

> Ive watched you that way for a long time. and you almost never talk on topic.
> and when youdo youre always right then too. even when you are wrong which is a
> lot of the time. .jt

Make up your mind. Incidentally, you've pretty much indulged yourself
here in most of the things you accuse me of doing.

Hi. I started to operate 2m and 6m CW + SSB.

I would like to know the "regular" distance that you can communicate
by using SSB + CW.

I've heard that your 2m SSB signals can be heard 6 times away (usually
?) compared to that of FM.

Thanks for your help !!!!!

I don't lie. There most certainly was not a deception; and
there is no backing out. You.....who can't post your real
identity nor a valid e-mail address are a fine example of
"deception", however.

> >If there were, I sure wouldn't have used my same old ISP.
> >That's not real bright for deception purposes.

> Don't give yourself so much credit. The fact is, you never
> even thought of that.

No, I didn't "think" of it because there was no deception.
It wasn't even an issue. For that matter, I forwarded a lot
of e-mail from my winradio@san.rr.com address to my
bcheek@san.rr.com address and replied to it from there. Now
why would I do that if deception were the intent?

> >I did set up a separate instance of a newsreader to handle just
> >the WiNRADiO issues so as to be more efficient and focused.

> Sounds like changing news readers was your only attempt at deception.

I didn't change newsreaders. I set up a separate instance of
the same one.

> >As you may be aware, software setups can be complicated and lengthy and it took a while
to
> >get it the way I wanted it.

> They're complicated if you don't know what the hell you're doing !

And.....if you don't have the hour or so it takes to fully
set one up in one sitting. I did mine spaced out over
several days.

> >I use Agent 1.5, the commercial version, and there are at least 22 menu tabbed screens
of
> >setups, some of which have multiple setups per. It takes a
> >while.....like even a few days.
>

> Then the problem is the user not the product. I am using the same product and
> it is NOT that complicated.

It is lengthy, shall we say. Setup of Agent 1.5 is not a
five minute job unless you accept the defaults.

> Stop making excuses, Bill. You are only fooling yourself.
> It's pretty comical.

You who can't post your identity and real e-mail address are
the comical one to be slinging such epithets from the safety
of your mama's skirts.

> Remember....don't waste your time with cancel messages....they
> don't work on 95% of all the news servers out there.

I don't do cancels.

> AND, if I DO see one float across, I'll use it to get you booted.

So "get me booted" anyway. Do it. Do what you think you
have to do. Don't threaten me.

I've had the AR1000XLT for several years now. Very reliable,
sensative to distant signals, and of high workmanship.

If you can get used to the odd programming and operational commands,
you will enjoy the unit. If you can't, then sell it and get a
Uniden.

BTW, with a long wire it is a very good shortwave receiver as well...

From: mulligan@ACM.ORG
Message-ID: <633prg$eue@hopper.acm.ORG>
Source record: 181937

"Tim Smith" <tsmith@nbase.com> asked for:
> ... a file containing the itinerant freqs for VHF/UHF (blue dot, red dot,
> etc.) business use. I'm also looking for a complete listing of GMRS and
> FRS freqs.

From the FAF - Frequently Asked Frequencies
on ftp://oak.oakland.edu
as /pub/hamradio/docs/misc/scanner.faf

Dot Frequencies

Dot color Other
Red 151.625 itinerant "J" Dot 467.7625
Purple 151.955 "K" Dot 467.8125
Blue 154.570 Silver Star 467.850
Green 154.600 Gold Star 467.875
White 462.575 GMRS Red Star 467.900
Black 462.625 GMRS Blue Star 467.925
Orange 462.675 GMRS
Brown 464.500 itinerant
Yellow 464.550 itinerant

"Dot" stickers are used by the manufacturer or distributer to
indicate the frequency of otherwise identical transceivers. They
are often found in rental inventories and on construction sites.
Additional itinerant frequencies include 27.49, 35.04, 43.04,
151.505, 158.400, 451.800, 456.800, 469.500 and 469.550 MHz.

FRS - Family Radio Service [95.627]

Ch Freq Ch Freq

1 462.5625 8 467.5625
2 462.5875 9 467.5875
3 462.6125 10 467.6125
4 462.6375 11 467.6375
5 462.6625 12 467.6625
6 462.6875 13 467.6875
7 462.7125 14 467.7125

The FRS was authorized on 06 June 96. It uses FM with a peak
deviation of +/- 2.5 kHz. Maximum power is 0.5w ERP.
Channels 1 - 7 are shared with GMRS.

GMRS - General Mobile Radio Service [95.29]
[95.621]
Base/mobile repeater I/P

462.5500 467.5500
462.5625
462.5750 467.5750
462.5875
462.6000 467.6000
462.6125
462.6250 467.6250
462.6375
462.6500 467.6500
462.6625
462.6750 467.6750
462.6875
462.7000 467.7000
462.7125
462.7250 467.7250

In addition to the station's licensed channel, 462.675 may be used for emergency and traveler's aid by all stations. Interstitial channels (462.xxx5) may be used only in simplex mode with voice transmissions of no more than 5 watts. They are shared with the Family Radio Service.

: I do not speak for them nor am I employed by them.

I wonder why they would continue to employ you as a representative...?

: I speak for myself and myself only, and I am self-employed.

Notice how Bill Cheek drops his WiNRADiO moniker when denying he tried to
pass himself off as a WiNRADiO representative?

: Is there ANY part of the above that you still fail to
: comprehend? Let's dissect it, if there is.

Why have you dropped your WiNRADiO moniker and added a detailed .sig to
your postings... now that your identity has been made known to all here?
I would have expected you to identify yourself when you were previously
flaming somebody for speaking badly of the radio you represent.

Also, I'd like to point out that one certainly has an expectation that a
reputable company like ICOM would not resort to using such subterfuge.
They do make a competative pc-based radio.

>>do you got a guilt complex or some thing? {smile}

>Do you?

No.

> You just jumped into a conversation that didn't concern you.

How did this thread concern you Mr.Q? You jumped in this one and a whole bunch of others that didnt concern you, sir. It doesnt matter because this thread concerns me in ways that are not able to be understood to you.

>Who's "cluttering up the newsgroup with drivel" here, if not you?
You?

You are not contributing to any thing just Mr. Cheeks public relations is all. It looks a little like you are a groupie of his and dont want to be noticed so you act high and mighty and do stuff to distract from the fact that you follow him around like a puppy.

> Theleast you could do is learn to compose a follow-up so that the quotes
>are properly attributed.

See how you are distracting from even the conversation you started. You do that a lot when some body tightens the screws on you. and gives you an enema.

>>>I have never sent any mail derogatory of Cheek to anyone.

>>And then you cant tell the truth your self. .jt

>You have just called me a liar.

You lie worse than a rug.

> Please show evidence of your statements, or withdraw them.

This and many other public threads are evidence enough that you send derogatory messages about Cheek. It is obvious for any body to see. You have a fixation on him. Is it sexual or just basic groupie stuff? Im sorry you dont like what I say but that is your problem because you dont like any thing that goes against your opinions. But it is a fact that you follow Cheek around like he got pork chop hung around his neck and youre a hungry puppy.

You should read your own posts and play like you are some bodu else what doesnt know what is going on. .jt

NO NO NO, the Audio from the LNA (Low Noise Amplifier) is transmitted
via infra-red to the remote and is decoded by the ASIC's (Application
Specific Integrated Circuit's) in the remote and then re-transmitted
back to the converter and recombined (heterodyned) with the video,
this keeps the video *MUCH* cleaner, but it also allows the scanner
hobbyist to listen in to this "audio" so that he can tell what
channel/program his neighbor is watching, whether it's the evening
news with Peter Jennings or hot kinky sex from Denmark ;)

I have been a little concerned with the tendency for posters to call
Winradio'sSpectrum Scope a "Spectrum Analyser".
It simply gives a graphic representation of activity on the band
being examined with relative signal strengths.......I could be wrong
(often am) but I would expect more from an analyser.
Winradio, I believe, doesn't call it an analyser.
It is a superb piece of gear, anyway and is a great way to find
frequencies.
Just a thought.

All of you Bill bashers are jealuous of his success and business smarts.
He WORKED his ass off in the early days when he was an undergrad student nerd/geek.
His company is a result of his leadership and the ability to accurately market
a product that people want.

If you don't want Wintel platforms then get a Sun RISC/UNIX workstation !
(which are incredibly powerful machines used in engineering/scientific
applications).

Seems we tell our youth mixed messages. Grow up, think ahead of the other
guy, and become rich and successful - oh, but don't be too rich or successful
or those of us who aren't as smart or savvy as you will be jealous of you...

At least Gates and company provides products that have changed the world
forever... your own trunk/mdt decoding software is possible because of him.
What else would you run it on ? UNIX ? ... if so great, I prefer UNIX anyway..
or VMS !!... but fact of the matter is, Windows is the predominant operating
system because it's inexpensive to the masses, and a reasonably good value.

Gates worked hard for his money, it wasn't just handed to him, he didn't
inherit it, and he still works hard for it....

More than I can say for the pathetic lazy whiners jealous of his wealth.

> people prefer?

Be advised that the PRO-90 is nothing more than a repackaged Uniden
BC235XLT. Unless you get the PRO-90 on sale or go mail order, you
will probably be better off getting with the 235XLT.

Do some research and find out if your area uses a lot of 800MHz
trunked communications that you would want to listen to. If not,
go with the PRO-64.

The 64 does have a tad wider frequency range coverage and a few
more features than the 90/235. But the 90/235 will be more
sensitive overall.

So, it would not be wrong for WinRadio to sue you for unconsenting use of their name? Is this what you are saying?

Are you saying you didn't get permission at all from WinRadio to pretend to be a representative of their company?

Perhaps you should rethink your position. Or rethink another lie. Whichever suits you today.

It ain't a threat, boy. Don't try me. You're a typical sales scumbag who
provides no value to anyone but Bill Cheek.

2643. F.S. Bearcat 8500 XLT OR

Newsgroup: rec.radio.scanner
Date: 1997-10-28 00:00:00 UTC
From: msgsports@aol.com
Message-ID: <19971028140101.JAA14723@ladder01.news.aol.com>
Source record: 181959

Hi

I have a Bearcat 8500 XLT scanner in nice shape. I am asking $275.00 for it.
Here are is the radios info:

25.000 to 25.995 Mhz Mode AM
26.000 to 28.995 MHz Mode AM
29.000 to 53.995 MHz Mode NFM
54.000 to 71.995 MHz Mode WFM
72.000 to 75.995 MHz Mode NFM
76.000 to 107.995 MHz Mode WFM
108.000 to 136.995 MHz Mode AM
137.000 to 173.995 MHz Mode NFM
174.000 to 215.995 MHz Mode WFM
216.000 to 224.995 MHz Mode NFM
225.000 to 399.995 MHz Mode AM
400.000 to 511.995 MHz Mode NFM
512.000 to 549.995 MHz Mode WFM
760.000 to 1300.000 MHz Mode NFM

Frequencies Steps on all are 5.0/12.5/25/50 KHz
Scans at 100 channels per second.(Turbo Mode)
Scans at 20 channels per second. (Normal Mode)
Looks just like the BC 9000 XLT.

Thanks

That was a good deal indeed. I am sorry I lost on it. Do you think
your friend would accept $200? Is it still under warranty?

>I think the product would be adequate for someone who is just getting into
>scanning. If you are interested in any sensitivity at all, it's a piece of
>junk. Hardware wise, it's a $50 scanner. That's because it's half-assed
>adapted to work in a lousy RF environment and doesn't handle it all that well.
>The software, on the other hand, is quite nice and full of cool features. But
>it still doesn't help when you aren't getting a good signal......

Well, I told you I have one. And I differ with you regarding your
assessment. And I have actually measured the sensitivity (I work as an
EE). On VHF/UHF it was between 0.35uV and 0.5uV. The official specs
are "nominal 1uV" - and I expected something around that, so I was
suprised to find figures that would be respectable even for more
expensive products.

Michael

Well, I don't know what he was trying to say either, but SCANNERS are legal here in the United States -- UNLESS a rare state or local law specifically regulates them. But it is up to you to find out if your state or city has a local law on the matter. On rare occasion, some cities do try to regulate scanners, too; yes. So you need to watch out for that catch, too.

Now.....certain specific things on the radio frequency spectrum ARE regulated by federal law and are illegal to listen to, such as the cellular and cordless phone _conversations_.
...However, it is _not_ illegal to listen to your son, or neighbor's kid, talking on the Space Patrol walkie talkie, which has been around far longer than the cordless phone, and which uses the _same frequency band_ as the cordless phone. (Don't ask me what the Senators were thinking when they wrote the laws, I have no idea except to say that they have absolutely _no_ complete understanding of what is going on. This is what Lobbyists cause them to do uneducatedly.)
As well, it is not illegal to listen to the cordless microphones, many of which also use the same frequency band.

Anyway. as far as states regulating actual possession of scanners (and radar detectors, too) in vehicles, I have a site which lists all the _texts_ of the laws, where a state has an actual law. You can find it at --

http://www.afn.org/~afn09444/scanlaws/.

For FEDERAL LAWS regarding scanning, I recommend Dave Stark's site, at http://www.ggw.org/nf2g/. He has a great site.

2646. ? about AR5000+3/SDU5000 combo

Newsgroup: rec.radio.scanner
Date: 1997-10-28 00:00:00 UTC
From: rick1959@juno.com
Message-ID: <878048907.27422@dejanews.com>
Source record: 181962

I'm writing in the faint hope that someone else has tried this combo and gotten some experience with it. Previously, I had an AR5000/SDU5000 combination which exhibited a fault where there was a "spike" on the SDU's screen at about the 8-9MHz position when using the 10MHz spread. This I found out was a known glitch by AOR. I'm wondering whether this will occur on the new +3 version. Since I haven't gotten the new setup up and running, I'm curious as to anyone elses experience. I should have my setup running next week. I'll let anyone who is interested know what I find. Thanks in advance.

Not if the method used to recover the data is different than what Motorola's patents say. That's why there is a Trunk Tracker on the market.

>Qualcom and GE/Ericson are not going to let Uniden have
>"access" to the CDMA/TDMA technology. FM is in the public domain.
>Is this why there are no MDT Decoders availible to the hobbyist?

Digital is just a different modulation scheme. Someone someone skilled in the art of digital modulation techniques can easily build a data decoder for this. And the modulation techniques are in the public domain, there are many engineering books on this subject.

>
>Look in back issues of Pop'Comm and Monitoring Times
>regarding a man who was arrested for modifiying radios
>so that they could intercept Tulsa, OK. PD Comms,.

This was not about interception. This person used illegally obtained software to perform the radio modifications and the radios I believe were claimed to be transmit-enabled.

>
>Remember back in the 1980's when HBO scrambled it's satellite
>transmission, which created a black-market for "piracy" software.
>It's the same situation, we now have a under-ground market
>for cellular, encrypted, and digital software so that the "hackers"
>can intercept the "forbidden" communications.
>Is this the new "pirate Radio"?

I believe a distinction must be made between digital and encrypted. Not all digital signals (may it be for trunked control channel, voice, or data) are encrypted. Nor are the modulation techniques and error correction schemes witheld from the public domain. If you read the various patents (a great source of information) the main reason for digital modulation is for spectrum efficiency. No mention is made that the modulation is used for securing communications.

>
>Also, does the Spread-Spectrum technology used in some 900Mhz
>phones and the PCS service render the ECPA '86 obsolete?

Again spread spectrum is another form of digital modulation that is known by those skilled in the art. If the data is not encrypted, ECPA would not come in to play.

> So was this a proprietary thing started by Uniden instead of RS rolling over for the FCC? A loose cannon, perhaps in Uniden? Disgruntled employee?<

No. This all started back following the congressional cellphone hearings earlier this year. Following those hearings Uniden filed a petition with the FCC calling for a ban on dual-conversion scanners and raising the intermod rejection standards for all scanners. Another part of the petition asked the FCC to keep all Uniden scanner certification applications confidential. The FCC routinely agrees to this request.
Tandy supposedly went along with this, hoping to head off even more restrictive scanner legislation (such as H.R. 2369).
Well, the whole thing blew up in their faces and Tandy put its attorneys to work trying to find a way out. Apparently they did.

2650. Cloned Scanners; A list of

Newsgroup: rec.radio.scanner
Date: 1997-10-29 00:00:00 UTC
From: bcheek@san.rr.com
Message-ID: <345aa6a0.332691606@news3.cts.com>
Source record: 181718
Cross-posted to: rec.radio.scanner,alt.radio.scanner

I just determined that the PRO-2032 base scanner is an electronic carbon copy clone of the PRO-39 handheld scanner, or vice versa, depending on which came first, I guess. Electronically, they are identical. Mechanically, of course, they differ as night and day.

This isn't all that significant except that a hack for one is a hack for the other, electronically speaking, so if you own one or the other, then in your travels if you run across something for the PRO-39 or PRO-2032, snag it for your archives. (See below for more clones and twins)

Over the years, there have been several instances of this cloning, most with scanners made by GRE-Japan for Radio Shack, but there are cases of Uniden clones, too.

Following is a list of scanners that are about as identical as can be followed by another list of scanners that are pretty darned close, electronically, even if not actual clones. For instance, the PRO-2004 and PRO-2005 are pretty darned close, but not perfect matches. The PRO-2006 is of the same family, but a tiny bit different still. Then comes the PRO-2035 and PRO-2042, which are virtual clones of each other and siblings of the PRO-2004/5/6 series. And then we have the PRO-43 that has many circuits of these five base scanners in it, as well as some marked differences.

The below lists attempt to match up those scanners that share very close likenesses. I'm sure the list isn't complete and if you have any additions, please forward your information directly to me at: bcheek@san.rr.com

Clones and near exact matches
==========
PRO-2021 PRO-32
PRO-2022 PRO-34
PRO-2032 PRO-39
PRO-2041 PRO-64
BC-760XLT BC-950XLT Regency R-1600
BC-200XLT BC-205XLT Regency R-4030
BC-590XLT BC-600XLT
PRO-26 BC-3000XLT
PRO-90 BC-235XLT
PRO-2035 PRO-2042 (Largely firmware/CPU differences)

Very close but less exacting matches
==
PRO-2004 PRO-2005 PRO-2006 (fraternal triplets)
PRO-2035 PRO-2042 (identical twins, and closely
related to the PRO-2004/5/6)
PRO-43 (closely related to all five
scanners in this section.)

Suspected clones or near exact matches
======================================
PRO-2037 PRO-62

If you can add to this list, please let me know.

Passing the written tests is a fairly trivial exercise for someone
with either good study habits, a small investment of time, a computer
program with exam software for drilling, etc. With public question
pools, there is no incentive to have people learn the actual theory --
the incentive is to merely study the question pools sufficiently to
be able to recall the correct answer from short-term memory. This is
not the type of radio operator I believe we should be encouraging.

Not exactly. I reported that OTHERS were being denied
manuals and included at least two different e-mails from
Tandy where they stated it themselves.

Indeed it was. J.T Ward confirmed it. Don Bishop of MRT
confirmed it. I believe Bob Grove & Larry Van Horn confirmed
it. And a number of people here on the newsgroups confirmed
it. And Tandy confirmed it.

2655. 9600 baud GMSK receivers IF chains .....

Newsgroup: rec.radio.scanner
Date: 1997-10-29 00:00:00 UTC
From: daniel@pandora.lugs.org.sg
Message-ID: <6383tk$26d$1@columbine.singnet.com.sg>
Source record: 181723
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.equipment,rec.radio.scanner

Hi,

I have been experimenting with receiving 9600 baud
GMSK modulated signals on 2 of my radios. The signal strengths
are very strong on both, but on one, an ICOM R-7100, I am seeing
many errors in the received bit-stream, while on the other,
a Kenwood TM-251A, a 9600 baud ready radio, I get almost 100%
correctly received data.

On the R-7100, I have tapped the signal off what I
assume to be the discriminator (as prescribed by several mods).
The mod seems okay for lower rate data, say 4800 GMSK or FSK.
I have also tried putting some buffers on the discriminator
output plus some filtering to clean it up from residual IF
frequency in it (455kHz). A look on the scope shows good
representation. However, since I do not have a storage scope,
it is hard to be objective in this comparison. Off hand, I
seem to notice that the peaks were a tad sharper on the ICOM
than on the Kenwood.

I am wondering if the problem has to do with some
non-linearity in the discriminator or due to group delays in
the IF filter stages. I am however, very uninformed about all
this stuff and would appreciate any pointers that might help
me understand why the ICOM rig does not do well at receiving
high rate GMSK signals.

Will using a different type of FM detector help? Such
as a PLL type detector for example? The bandwidth of the radio
is about 15kHz and the IF filter preceding the discriminator
is a CFW455E (on the Kenwood it is a CFWM455E). The bandwidth
filter in the ICOM is diode switched. There is also a limiter
after some buffers on this filter output. The FM detector has
a ceramic resonator in it (CFY455S).

I suppose those who have been playing with 9600 baud
TNCs would know a lot more about this and could offer some
advice. Thanks in advance.

Looking forward to any replies.

You must have a poor newsfeed. I posted my experience with
trying to obtain a service manual through the Radio Shack Unlimited
catalog at a local Radio Shack. The item came up as "RESTRICTED"
on the POS screen. Furthermore, I inquired with the Media Relations
senior manager and received back the same form letter being sent out
by Radio Shack Customer Support. John Ward took things quite a bit
further, and made detailed postings about his findings.

> Now we are being told by Bill Cheek that he has solved
>the problem; is this a cure for which there is no disease?

While I don't agree with Bill's sensationalization of his contribution
to uncovering this situation, I must agree that he *did* "start the
wheels in motion" by bringing the ban to the attention of others.

[You have to admit, Bill, that your post made it appear that your
efforts alone, also directly brought the manuals back into the
sales stream of RS... although any intelligent person should be
able to see your hype for what it was.]

2661. ACARS problems with SC-150

Newsgroup: rec.radio.scanner
Date: 1997-10-29 00:00:00 UTC
From: greg20@ix.netcom.com
Message-ID: <638d41$559@sjx-ixn9.ix.netcom.com>
Source record: 181729

Hi,

I have a Uniden Sportcat SC150 handheld scanner, and I'm trying to use the Kracars ACARS software to decode ACARS messages. I am located quite close to PHL, Philly Int'l airport, and I can hear all of the local aircraft transmissions (airborne and ground) just fine. I also am aware of three ACARS frequencies, of which I can hear short bursts of data on. The problem is, when I have my computer on (which I have to have on to log/decode messages), there is a lot of interference and the transmissions get "staticky". Is there any way to cut down on this interference? I can't really move the computer and scanner any further apart, because the antenna that I'm using (an FM radio antenna hanging out of the window facing the direction of the airport) doesn't work in the back of the house for some reason. Also, I have an audio cable with headphone-style plugs on each end connecting the speaker out of the scanner to the line in of the SB soundcard, which is what the directions say to do. When I tune in the NOAA weather using this method, it comes in loud and clear on my computer's speakers and the Kracars ACARS program recognizes that there is a strong signal coming in.

The main problem is whenever I try to tune the scanner in the aeronuatical band with the cable linking it to the computer far away from it, the ACARS transmissions come in loud and clear. As soon as I move the cable with the headphone plug on it close to the scanner, it gets more interference until the scanner finally stops receiving it altogether and goes back into scan mode. If I plug the cable into the scanner while it is scanning in the aeronuatical band, it doesn't find any active frequencies but as soon as I unplug it and move it away it starts receiving the transmissions again. Any suggestions as to what I should do?

As you can prolly tell, I'm a scanner newbie (been active for about a year listening to aircraft, only recently become interested in ACARS) and would appreciate any and all help. I hope this makes sense... If you need any more clarification, please feel free to e-mail me/reply in this newsgroup.

Thanks in advance, :)

There was that speculation and perhaps even some evidence to
support it (in the Tandy camp), but I think J.T. Ward found
out the most believable story in that Uniden applied to the
FCC to keep its new certification CONFIDENTIAL instead of on
the public record. The FCC was aleged to have denied the
confidentiality on the basis that the technology is made
available to the public in service manuals.

Tandy was reported to have snooped or otherwise acquired
this tidbit and reacted first by banning sales of the
manuals.

The truth? It's doubtful that we will ever know for sure.
But I think J.T. Ward's report is the most believable and
the most researched. And Don Bishop of MRT magazine ragged
the hell out of them all until the matter was rescinded. At
least, that's how I see it.

I work for RS part time, and as far as I can tell, it is simply that-just a sale item. The PRO 64 is new for '98, although I think the same model was sold under a different nomenclature in the '97 catalog. The PRO 64 has 10 banks of 50 channels, and 40 monitor(scratchpad) memories. Has a nice autoscan-store feature, but the audio is muted whenever this feature is enabled. The PR) 64 does have the availability to be computer controlled utilizing ScanCat Gold (www.scancat.com) and the optional interface. Has a charging circuit built in, runs off of 6AA's or optional sealed nicad pack. I picked mine up last week, nice little radio. Triple conversion, excellent receive sensitivity and good crisp audio. Go check it out!

CSI makes a "communiv=cations Decoder" that can decode CTCSS (PL tones)
tones, as well as DTMF tones. I think that Ham Radio Outlet sells it for
$325 or something like that. It is ment for amateur radio, but I dont
see why it wouldnet work with a frequency counter or a scanner.
They have a web page, check it out.

"JEEPMON" <JEEPMON@JUNO.COM> wrote:

> WHY DOESN'T WINRADIO ANSWER THE QUESTION

WiNRADiO Communications does not participate on this
newsgroup and therefore can't answer the question unless you
put it to them via e-mail: info@winradio.net.au

I answered it as best as I could (but I am NOT WiNRADiO) in
other posts here.

> OF WHY DO U NEED A FASTER CONNECTION OF 115K ANYWAY?

"Need" may not be a relevant element here. If you just spin
dials and listen to the speaker, there may well be NO
"NEED". Need is relative. I can't answer your needs.

> WHAT INFORMATION GETS TRANSFERED BETWEEN RADIO
> AND PC THAT 115K (OR 9600 OR 28.8K OR HIGHER) CANNOT HANDLE?

Well.....consider the Spectrum Scope for one thing and
WiNRADiO's 50-ch/sec speed for another, Only just so much
can be done with full data acquisition and full control
(simultaneously) on a serial connection at 9600-bps. Screen
updates are another factor still. Think about it.

But if you don't "need" much, then the matter is moot and
WiNRADiO's ISA bus connection might well have no particular
significance to you. It didn't for me, either, for a time;
until I thought about it and started wondering how's come
the Icom PCR-1000 goes so slow.

In one second, 9600-bits is roughly 1-kB. A thousand bytes
seems like a lot of information, but if you're collecting
data at a high volume; controlling the radio's many
functions; and refreshing the screen at a rate fast enough
to take away the jitter and "blink", then a thousand bytes
per second might not be nearly fast enough.

If you think different, then you're right and you win.

Simple. No problem.

Message-ID: <3457EE3D.D97D450A@nospam.ibm.net>
Source record: 181748

I have both. The base unit is much more sensitive if you are in a weak signal
area. As far as trunktracking mode goes, they are both fairly similar, with
the base unit being able to be programmed with your computer via an rs232
port, vs the handhelds lack of that feature. In conventional mode, the base
unit allows search programming, birdie lockout on search, data lockout, weather
alert, ctcss tone programming, tape recorder control, and a few other features.
I much prefer the base unit, however, its rather large, so if you plan to use it
on the road, you want the portable and an outside roof mounted gain type cell
antenna. The only other trunktracker I have seen is Radio Shacks copy of the
BC235, at about $50 more.

I see, so the scout needs to be up close too? well, it can be farther
that an frequency counter but, I was thinking from their advertisements,
that it could pick up froma greater didtance than that.
although wuld you reccomend the device? Have you had alot of usefull use
of it?
I am just contemplating the purchase myself...

2684. Re: uniden bearcat question

Newsgroup: rec.radio.scanner
Date: 1997-10-29 00:00:00 UTC
From: Kenneth Chirko <chirko@xnet.com>
Message-ID: <6392ij$k10$1@flood.xnet.com>
Source record: 181752

Dave,

The BC50XL is a vintage 1985 scanner. It has 10 channel, 10 band coverage
as follows:

29 - 29.7 Mhz. 10 Meter Amateur Band
29.7 - 50 Mhz. Low Band
50 - 54 Mhz. 6 Meter Amateur Band
136 - 144 Mhz. Military Land Mobile
144 - 148 Mhz. 2 Meter Amateur Band
148 - 174 Mhz. High Band
406 - 420 Mhz. Federal Government Mobile
420 - 450 Mhz. 70cm Amateur Band
450 - 470 Mhz. UHF Band
470 - 512 Mhz. "T" Band

It scans at 15 channels per second with an automatic fixed delay of 3
seconds.
Any of the 10 channels may be locked-out. It has no search capability.

Programming is accomplished by direct frequency entry into a channel as
follows:

As an example, we'll program the NOAA weather channel on 162.55 Mhz.

Press the "Manual" key once. Puts the scanner in manual mode.
Press the "1" key. Select the number of the channel
that you wish to program.
Press the "Manual" key again. Brings the scanner to channel 1 in Manual
mode.
Press the number keys in order: 1 6 2, then the decimal point, then 5 5.
(The decimal
point shows up in
the display as a dash)
Press the "E" key once to enter the frequency into channel memory.
Press the "Manual" key once to advance to channel 2, etc.

I sincerely hope this helps! If you need more info please email me.

Interesting point you make.

Bill has been GUILTY of making bogus posts with fake names
AND **UNWANTED** commercial posts on rec.radio.swap MANY times.

His reputation is why he had to assume a new identity - no
one would deal with him under his REAL identity.

Tate - Spam fryer 1st class wrote:

Nothing technically-motivated about it. More like SEEEEEE-Q DEEEEEE-X
related. You just want to get on the air and yell into a microphone,
and you're pissed because your life experience doesn't give you a
"Get Out Of Morse Free" card.

PRO-26 "hyperscan" scanner for sale!

For a detailed feature list see the following URL
http://support.tandy.com/support_electronics/doc17/17719.htm
For a GREAT picture go here
http://www.demon.co.uk/javiation/pro26.html

Great scanner in PERFECT condition. No scratches, no scuffs, no marks. No ink worn off the buttons, no logo's worn off the case. Comes with charger (not included at time of purchase) and 4 AA rechargeable batteries (these were not included at time of purchase) and a rubber duck antenna. Has a clip to go on your belt.
Scans 25MHZ to 1.3Gig ALMOST SOLID! It is missing the cell phone freq.'s but I can tell you how to modify it so they can be received. I have 5 pictures and specific instructions on how to do the mod.

It's called a "hyperscan" because when you hit the hyperscan button you can scan through a band... say 155 to 160 MHz at 10Khz steps in about 5 seconds... WOW, you don't miss anything.

Also when you do this kind of a scan, sometimes there are channels that have "garbage" that always catch your squelch, and stop you dead, well you can just hit a button and to "skip" up to 50 of these. Very handy when your scanning a range and there is garbage right in the middle. You can find more stuff faster this way.

up to 200 memory channels in 10 banks... so you can choose to scan 20 channels with the touch of a button. Great when you drive through different areas, and you need to switch over quickly to a different set of freq.'s.

keylock button, so you can stick it in your pocket and not change any settings.

The cool thing about this scanner is you can choose the "mode". Like AM, FM, WFM (wide band FM for listening to radio stations, and even some public service stuff).

It has a attenuation setting that can be set for individual channels, so you don't have to crank you squelch up just because one channel has a little noise. Just hit shift-attenuate on that channel, and the others don't have to suffer.

IT AUTO-PROGRAMS!!!! You give it a bank to work in, and give it a range to scan, and when you come back.... It has recorded all frequencies that have made any noise since you left. This is especially handy with a VOX

(voice activated) small hand held recorder (which i will include for another $40 dollars with charger and a few micro-tapes).

I will include TONS OF PAGES of secret freq.'s that I have discovered (FBI, CIA, ATF... etc).

This is a scanner for "the big dogs". Nothing wimpy about it.

I bought it new for 450 + tax + charger + batteries.
Will sell for $375.00 shipped UPS ground at my expense ($40 bucks more with the micro-VOX recorder, charger and tapes, i'll even throw in the batteries)
INCLUDES MANUAL!!!!!!
INCLUDES DOCUMENTATION FOR THE MOD
Or just look here =>http://w5gb.nmsu.edu/kc5kto/mods/pro26cell.html

Am moving & can't have antenna on roof... :-(

ICOM R7000

Specs avaialble from Icom Website or various radio sites on www.
Great condition, no damage, no marks or worn buttons/dials.
I did not use it heavily.

Unit has the extra 100 channel (total 200ch.) & increased scan speed
enhancement. (performed by EEB-not me, mods work great)
Has built in Speech Synthesizer to anounce frequency when it's active
(neet-O!)...

Also have the matching IC-SP3 Base speaker.(mint)

Both in original boxes with cords & manual.

One of the greatest receivers known to mankind and it's looking for a
new home.
You don;t even have to be a Gov't agency or certified shop to buy it
from me.
That's correct the 7000's have continous coverage (out of the box-no mod
neccesary.).

$1,400.00 shipped to your door.

> Since you say you don't care whether I am a fraud or an ignoramous, then I'm
> sure that you won't come back to tout up what a good pair of pigs you two
> really are.

Look, Mike, Glenn Hansen have ahd enormous and bitter differences on
issues MUCH important than the hobby we discuss here. what your meager, one
dimensional intellect cannot seem to grasp is that despite contrary views we
are both dedicated to a sense of fair play and honesty _as we see it_. You, on
the other hand cannot conceive of allowing any view conflicting with your own
to be aired without some reproach fom you.

Life doesn't work that way and if you should see yourself as a perpetual
"victim" of malevolent forces beyond your control, you should consider that
YOUR dysfunctionality might be the true source of you seeming inability to get
along. One of the first symptoms might have been the cchronic absence of the
phrase: "Plays well with others" from your elementary school report cards.

That you've advanced (in years anyway) to adulthood without being able to
adjust to society suggests deep seated problems, perhaps of a pathological
nature. Talk to your doctor and see if he can't recommend a course of
treatment or can refer you to a specialist.

Chris,

The BC3000XLT requires the AD-70U Uniden/Bearcat
AC adapter. The AD-70U outputs 12V DC @ 200 mA.
The outside of the plug is negative while the inside is positive.

Hope this helps!
Ken

The site http://www.iw7chv.org has been modified. For who already knows
about it will find really interesting news, explained with a functional
graphics to quickly understand what are the services offered. I say
someone for who go to see it the first time:

- HamRadio Search Engine: with over 10000 entries is the most complete
HamRadio Search Engine. You can search/add/modify your URL. It's also
possible to put a banner the first page of the gate.

- Internet <-> Packet Link: You can send mail between Packet Radio
Network and Internet. The service is in testing way..test it.

- Internet Radio gateway: you can browse the gate reading the Packet
bulletins around the HamRadio World.

- TOP 10 HamRadio Site: TOP 10 permit you to vote your favorite Ham
Radio URL and suggest your one.

An more ... HamRadio news, POWWOW community, meteo page, etc. ...

For better information write to:

This "policy" as you put it didn't seem too strong to begin with.
About a month ago when everyone was whining about the floating rumors,
I decided to call and order a service manual for my 2026. I got no
questions or hassle and it arrived in less than a week.

I posted a message to this affect as well.

>
>I look for Radio Shack to either make this announcement

>sales of scanner service manuals as if nothing had happened.
>Either way, we don't care.

I think they're playing with you. They never had the policy, so
they're telling you they'll change it. They look like the good guy
and you get a swelled head.

Sure can!! Just charge as you would regular nicads-capacity in millaperes
should be on battery. The charging time depends on how much current your
charger puts out. A typical rate giving a charged battery would be about
12-14 hours.

Make sure the voltages are the same. The mah can be different of course.

Well, you can always call 800-442-2425 and ask if the ban
has been lifted there. That's the source of Tandy service
manuals, right there at the hoss's mouth.

I expect it will take a couple of days for word to filter
around the organization if they don't make a public
announcement.

J.T. Ward learned that this whole hullabaloo originated in
the Uniden camp anyway, so maybe Tandy will find it easier
to just ease out of the limelight rather than make an
announcement. You know....play like nothing's amiss.

> If that's true, YOU DA MAN!

I think it's true, and if so, there were other people in the works who made it happen....like J.T. Ward of PopComm, Larry Van Horn of Satellite Times, Bob Grove of Grove Enterprises and Monitoring Times, and Don Bishop of Mobile Radio Technology. Don Bishop may have been the single most crucial catalysis due to his editorship of MRT, a rather powerful force in radio.

But whatever....several people were involved, and ultimately hundreds or thousands who wrote in, complained, and voted. I think that's the thing that counts.

Hi,

We can provide you with a copy of the complete CI-V Protocol Manual,
the info used by folks who write code to drive the receivers and
transceivers.

It is about 25 pages. Will send a clean photocopy for a $10 bill
including postage.

Be sure to include your address.

R8500's still on sale till the end of the month! See our website
What's New section for details.

Settle down, Mama, your personal bias is showing. Do you suppose you had any influence in your kids not "taking to" the code? You surely didn't "telegraph" your dislike did you? Did they say "We don't like it" because they were sure you would give them a sucker if they said that, and if not, something sour?

Children, first of all, enjoy doing what MAMA does, that's how they learn. If you really want them to learn code, I'm sure they will do that for you, just as easily as they knock it for you.

MY (grand)son, age 10, seemed to like it. Wonder why? Could it be because I like it and that I built and gave him a computer last summer? The promise of a reward is a strong incentive for a child, either way. Adults too. That's why all these folks are in favor of the no-code license. It's (code)free.
Good Parenting,
Dick W0EX

Both Digital Modulation(DM) and Spread Spectrum(SS) Technology
were designed for spectrum effiency, not for privacy, they are
not a method of encryption.

DM and SS are now in the public domain and they are "readily
accessable to the general public". Patents are not an issue.
Is software an issue?

Now is the time for a "new generation" of radio reciever units
that are capable of processing digital, trunked and spread spectrum
radio signals. Bring the "radio scanner" into the 21st century!

What features and options should our new Digital Radio Reciever
have? Which company should make these units? What is a fair price?
How do we get started with the Research & Development of this product.

Depends on what country you're living. The possibility to transmit
outside the ham-bands is legal in Holland, however it's forbidden to
use the possibility.

My 706MK2 transmits from 150 kHz to 54 MHz, and from about 136 to 200
MHz, everything legal. I didn't do the mod by myself, I asked the
ham-store to enable this option when I bought it.

You're one of the wackos that Hansen loves to defend, so it doesn't surprise me that you would blindly leap to his defense with your ill-conceived diatribe. Since you say you don't care whether I am a fraud or an ignoramous, then I'm sure that you won't come back to tout up what a good pair of pigs you two really are.

If you have been reading this NG all along you might have seen numerous posts by different persons all claiming to have spoken with an RS Droid or with the parent company. In many cases, customers were refused and sometimes given different answers. Lets think for a moment "Many different people + the same end result = a real world problem!" Did you try to buy a manual yourself?

2733. Does anyone LIKE Radio Shack ?

I have read and posted in this NG for several months - amd notice that many of you trash radio shack on a regular basis. Have any of you had a positive experience at the store ? They must be making someone happy, as they are still in business.
Have any of you that complain about RS ever worked there, or in a sales position anywhere ? Do yoiu know that they pay minimum wage to their "droids" ? Do you really expect them to be knowledgable about EVERY item in that store ? If you get a little more background on how things operate at a store you'd have some idea of what goes on. I don't believe that it is appropriate to trash all the employees because of a couple of idiots. Maybe where you work has idiots too, would you want people trashing you because of them ? Didn't think so. Yes, I do work PT at the local RS, but I do it because the manager is a friend of mine (and the discount is not too bad either). You try and find someone who is knowledgable on all items to work for minimum wage ! (Try for twice that amount even).
Bottom line, don't paint all RS employees with the same brush.....descending from soapbox now...

More range usually means more antenna, more height, more outdoors. Most
any outdoor ants. can improve your range. But for handheld operation
you already have one of the better ants.

2735. ## looking for a scanner control program with advanced logging capabilies

Newsgroup: rec.radio.scanner
Date: 1997-10-29 00:00:00 UTC
From: techno55@actcom.co.il
Message-ID: <EItHG0.Dy@nonexistent.com>
Source record: 181842
Cross-posted to: alt.radio.scanner,alt.radio.scanner.uk,rec.radio.scanner

Hello fellow scannerists,

I'm looking for a high end scanner control program with advanced logging capabilies (preferably for the AR8000). The special features I need are:

While scanning/searching, the program will monitor the PC's serial port (the other one, not the one used to control the scanner). Once a character (or characters) is received through that monitored port, the program will log it to a file, and append a timestamp AND reception frequency after it. This is perfectly under the capabilities of a PC equiped with TWO serial ports (standard) and an AR8000 which can be computer controlled and also be queried for current frequency through same computer port.
The question is whether such a program is currently available.

Note: additional options I would like to see are:

1. Parallel port monitoring (concurrently or instead of the serial).

2. External event (serial/parallel port triggered) recorder activation. This is nice but I could do this with external h/w.

3. A PC soundcard based recorder triggered by this event would be great (but I guess the program would become too monsterous to handle...:-)!

Any pointers in the proper direction will be truly appreceated...

Note: when Replying, please email me directly in addition to posting here, so no responses are missed. Don't forget to remove the "55" from my email address inserted as an anti-spam counter measure...:-)

Thanks and best regards,
techno

Congress critters have no business legislating something
they don't know $h!t about. There needs to be an organiation
that represent radio hobbyist, something like the dreaded CTIA.
This organization would educate the lawmakers on what they
are voting for with our bias of course.

I've always heard that the HAM bands were given to
amateurs in return for their learning skills (like
morse code, electronic/technical theory) that
would allow them to get on the air starting with
a pile of parts scavenged from debris in an
emergency. I don't see someone coming up with
an all-digital over-the-air network from scrap
parts. CW and simple equipment is much more likely.
The reward for that effort is bands that other
people want.

It probably goes back to March 20, 1972 on the coast of North Vietnam, 30 miles south of the Port of Hia Phong. We were both naval aviators. Dan flew off the USS Nimitz. I was based on the USS Enterprise. Our meeting on that foreign beach was not an accident. After a ferocious dogfight with 12 MIGs my A6 Intruder was out of munitions and fuel. Knowing I had to bail I rammed my empty A6 into the last remaining MIG. He died I punched out. Dan was on the flight sent in to rescue me. They hadn't been told about the new SAM battery. Dan was the only survivor. We met on the beach. I had fallen victim to a Charlie booby trap and lost both legs, my right arm, left index and middle finger, one eye and my right ear lobe. Dan, using his Zippo lighter, heated the top red hot, cauterized my wounds and bandaged me up. He then proceeded to swim the Gulf of Tonkin with me strapped to his back. He then walked across Hainan and swam the South China Sea to Hong Kong. There we bought cheap replacement parts to fix me up, got drunk and chased women for a few days.

So yes, I would love to defend Dan but I have yet to get a chance. He IS a true American Hero!

Arguing against Morse because it is obsolete should be done with great
care. HF is obsolete.

The reason for Morse code requirement was a dumbing down of the original
requirement which was a practicum of building hardware. I think the
Morse requirement should be replaced with the more applicable practicum.

2756. Trunk Trackers - Base vs portable

Newsgroup: rec.radio.scanner
Date: 1997-10-29 00:00:00 UTC
From: sproctor@microline.org
Message-ID: <MPG.ec14122ab09b036989680@news.calweb.com>
Source record: 181863

I am looking for a trunk tracking scanner. Is there any difference in features, capabilities between the Uniden BC235XLT portable and the Uniden 895XLT base scanners?

Also, what other choices do I have aside from the 2 listed above?

Any info is appreciated.

Thanks,
Steve

How many others do you think figured it out, as compared to how many who were fooled? Why do you think he made the considerable effort to set up another instance of his newsreader just to play this little game? Was it because he knew that if he posted under his own name, people would discount the information? Was it to bait people into another of his patented flame-wars? What legitimate reason could there be for such a deception?

>posted from San Diego Roadrunner, which is Bill's ISP and Bill has
>previously offered the WiNRADiO for sale. Not exactly rocket science
>figuring it out. Be honest now, did it really fool you?

Yes, because I have better things to do than examine the headers of hundreds of messages every day in an effort to determine who's playing games with us. If he had merely posted the information under his own name, as he's done in the past, I would not have said one word about it.

MUST SELL!

Uniden BC9000XLT 500 channel base scanner.

This radio is in new condition, comes with original box, antenna, AC adapter, and manual.

Radio Features:
Rotary tuner control, frequencies or channels.
500 memory channels, 20 banks.
25-1300 MHz (less cellular)
10 priority channels.
Auto Store
Auto Recording
Auto Sorting
Scan/Search Delay
Direct channel access, direct frequency programming, frequency transfer.

Programmable Alpha Characters
Variable frequency steps.
Signal Attenuation
Data Skip
Keypad lock
Line, and AUX Jacks
CTCSS board can be installed.

The price is $200 plus $10 for shipping. (firm, no trades)

Message-ID: <34592ED9.117C@clandjop.com>
Source record: 181619

Hi All,

Does anyone know what transistor Q32 does in the voltage regulator circuit of the PRO 2004? I'm getting about 16 volts to the collector pin, but nothing out. I have already replaced the old Q32 with a new one and still getting the same results. The scanner's 5 volt regulator (IC8) works and I can get the display's backlight to work and some very faint noise, but other than that it's dead. I'm guessing Q32 might somehow be the trick. Any ideas??

Thanks,
Steve Phipps

Or Open VMS Vax or Alpha !! (DEC machines). Bear in mind, the latest Alpha
chip runs at 600 Mhz !! This machine can run Windows NT, Unix, or VMS. The
point being, no one is pointing a gun at your head telling you to use MS products.
If you have the bucks buy an Alpha box, run Netscape under Unix, and you'll be
fine.

Most businesses run their mission critical apps under UNIX anyway. My Alpha box
is clustered with a few Win NT boxes, the NT boxes periodically crash, but do you
see me complaining about MS ? no, the cost/performance profile on NT on an Intel
box was good for the application. Serious apps run on the Alpha, under VMS

It's a free country, don't like Microsoft products ? then don't buy them.

Otto,
In a nuthsell, the X10 is a VERY well built radio that is just a tad
bigger than the R1 but is easier to use. I like mine very much but use
it as a general carry-around type unit. I wouldn't suggest it for use
as your primary handheld.
Has poor VHF-lo filtering, problems with the squelch, rechargeable
type batteries don't last long and only scans memory at 5-6 channels
per second. Selectivity needs some work too. It does have a lot of nice
features and great audio.

Mike,
Thanks for the kind words and pointer to my review! How are you
and your X10 getting along?

> they do with the extra size? Perhaps add an amp, or SOMETHING?

Hi Mike,
Base units generally have more features than their handheld
counterparts.
They sometimes have better specs for sensitivity, selectivity and offer
better filtering to protect against strong signal interference. The
audio
produced is almost always more powerful and has much better quality.

> Now that I think about it, I have some other questions.. Is it worth it
> to get a scanner with a range above 1.3 Ghz? I don't see them too often and
> when I do, they are quite expensive.. It doesn't seem worth the money for the
> extra range..

For most people, the extended coverage above 1.3GHz is not necessary.
However, units which receive over this range generally tend to receive
the entire HF spectrum as well which is an added bonus worth paying
for. For the most part, we're talking about units from AOR, Alinco,
iCOM, Welz & Yupiteru. Most of these models from these manufacturers
are held in high regard for good reason. And the extra bucks usually
buy quite a few more features that you won't find on the normal
Radio Shack/Uniden models.

> Finally, I live in a suburban-type area, and I want to get better
> reception.. on the whole range... I don't want to spend more than $200 on an
> antenna, either.. Any recommendations for antennas that do a great job of
> increasing receive range?

Depends on the type of radio you have and what your antenna mounting
options
are. There are some nice antennas sold in the $40-$90 range that will
get
you a lot more signals. Provided you use a radio with good filtering.
Some
radios will not be able to handle the added signal strength the antenna
gives you and will produce various forms of interference. In these
cases,
adding an antenna is more of a curse than a benefit.

If you are using a base model, good antennas to check out are the
ScanTenna from Grove and the discones made by iCOM and Diamond. If

you are using a portable/handheld model, some form of telescoping whip antenna will do wonders compared to the stock rubber duck that probably came with it.

Hope this helped some. If you have any more questions, feel free to e-mail me at the Reply To address of this posting. Good luck!

Yup, there's commission - ONLY if you sell over a certain quantity per hour.
The present formula is 6% of your gross sales per hour. You must sell
more than $87 an hour in goods. That's a whole bunch of "inexpensive
battery and cable needs".

>I asked for a replacement 9-pin D shell connector for my modem, and the guy

>a BNC antenna jack.

Great ! There are at least 2 employees that know their product(s) - BUT he
and I do not make the company policy to sell or not sell manuals or products.

>So you're condemning all of us because you work at the RS? To make up for
>it,send me a PRO-26... ;)

No, my problem is that the corporate big wigs make stupid decisions, then
ya'll come into the store and give us a hard time ! I think that you
should be able to buy a manual and all the parts you want ! (Gotta get my
$$/hr up y'know !).
There was a guyn suggesting that people come into the store and "pretend"
they want to buy a scanner then change your mind to "screw" the compnay.
All you do is waste your and the salesperson's time. I am glad I don't
make my living at RS !

>I just hope you're not that new kid I've seen working at the RS in the
>mall...

Nope, been "helping" my friend John @ his store for about 6 months, and I
am certain that you would not confuse me for a "kid". Of course we do have
a new "kid" at our store that is about as smart as a box of rocks, but
that's another day......

Isn't that what ARRL is supposed to be? Now granted they seem to be more 'ham' oriented - but stuff like this has long reaching implications. What's their take on this?

From: sctreact@aol.com
Message-ID: <19971030160600.LAA29532@ladder02.news.aol.com>
Source record: 181676

DISASTER COMMUNICATORS NEEDED:

The IMPACT Disaster Response Unit is looking for volunteers to help staff a one-of-a-kind Disaster Response Unit. The IMPACT Unit is on-call with most public service agencies through-out Southern California. These agencies include Fire, Police, Sheriff, CHP and more.

With the expected winter storms of El-Nino, IMPACT is going to be very busy and can use lots of help. We utilize all types of communications; including CB, Amateur, GMRS, FRS, VHF/UHF Commercial Bands, Cellular and more. You do not need any special training or equipment to be part of this unit.

Send your snail mail address, or any questions to
sct_impact@bigfoot.com
and we will send you more information and an application for the IMPACT DISASTER RESPONSE UNIT right away.

Thanks,
IMPACT Board of Directors

Let me see...hmmm?

Now we have GPS... and much better navigators?

Now we have diesel engines... and much better sailors?

Now we have synthesizers... and much better composers and musicians?

Now we have word processors... and much better writers?

Now we have calculators... and much better math students?

Now we have television... and much better... ???? (readers?)
Don't make me LEARN to read. I'll just cut and paste that archaic text into my Monlogue voice synthesizer, and it will talk to me.

The list goes on...

There is much to be learned here. Every time society takes a step to make something easier for the masses the volume of people taking advantage of the new technology more than quadruples, (it's great for the economy you know) while the quality of the "craft" sinks lower and lower...

Personally I got my "General Class" ham license when I was 12 years old... It took me three tries. So all you electronic geniuses out there that are whining about having to learn it should be embarrassed... Seriously embarrassed. It's really not difficult at all. You're not complaining about someting a 12 year old child can do are you? Have any of you ever spent more than a few minutes trying to get the "hang" of it (cw) ? I doubt it.
Sure it's an out moded form of communications. That's not the point. The point is it's nice to put a student pilot in a Cessna 150 before you let him jump into an F-16. The student just might learn something... Though judging by all these posts it seems most would say no... get me straight to the F-16. (Since the Cessna is out moded by all your analyses.)

When I look at the VERY long list of people posting their bellyaches about having to learn such an archaic mode it just confirms to me what society is all about today: "Entitlements"... gimme gimme gimme. I want mine and I want it NOW! Don't make me run the gauntlet, no trial by fire, no tradition, no committment. Gimme it NOW!

Now I think I'll get my mind back on sailing... You all know, "that archaic form of transportation" using the wind. The mode you have to LEARN how to do. Heck, it's taken me a lot longer to learn to sail than to learn the Morse code. I guess I should have whined about that years ago.

How about replacing morse code with a requirement for a new ham to be
able to count to 100 in hexidecimal, binary and octal. At least that
might come in handy some time in the future.

OK, silly idea... but I think the point the no-coders are making here
is that learning morse code is essentially a useless skill (face it,
there's not much use for it anymore). If you want something to weed
people out, at least find something that is going to be useful in the
future! Hell, make 'em pass a test in quantum physics or rocket
science or something. Anything. Just make sure it's something
useful!

>Sales for the day times number of days worked.

Well, actually you have to maintain OVER the $85 / hr to get commission.
If you are there for 8 hours and sell only $100 worth of product you still
get your $5.15 per hr. that you work. The really fun part is that during
"peak" season, (Xmas), the formula is adjusted even higher - God forbid
they pay you any decent $$$$

> How does it feel to be paying the RS goons $20 per day?

I don't understand this question

> Bet I know where it goes: INTO the nauseaus slogan being
> grilled into our subconscious daily: you have questions, we
> have answers" bs.

Partly, the rest goes to District Managers and Merchandise Planners that
have you rearrange the whole friggin' store every couple weeks !

> Talk about stupid peole working for smarter crooks.

Yeah, I understand now why my friend asked my to work part-time for
him....nobody with any sense would work there FT (except store managers,
'cuz they get paid bonuses, overrrides, etc.).

The original intent of my post was to imply that it is wrong to go in and
trash the people that work at the store level - as they don't make any of
the lame-brained decisions that irritate us all. I will concede that we
have our own share of idiots at our store - but I believe that you will
find that at any place of business......

Please RE-PARSE the above.

> Do we have documentation for the FCC action? Perhaps you could get
>it from the FCC by a FOIA request. That documentation would mean more
>than traffic in the NG, if people want to follow up with letters to
>congressional representatives.

NO. Sources within the FCC which John Ward has contacted, have denied
that any such letter or notification was sent. Unless Radio Shack
presented something more material than an official statement that the
FCC REQUESTED IT, there is little to ask for under an FOIA which would
not be so broad as to have a room full of documents dumped in your
mailbox (at a great cost to whoever does the FOIA request).

The above is apparently null and void now, in that it appears that
the only "request" from the FCC was the FCC responding to Uniden's
request to make the certification paperwork confidential with a "We
can't make it confidential if you make the manuals public." Not really
a request by the FCC, but rather a condition that Uniden must follow in
order to have the FCC comply with UNIDEN's request. [That is, if I
understand correctly what John Ward has recently uncovered.]

No wonder RS hires people with no brains.

This is a NO-WIN situation for the employee
and a WIN-WIN ALL THE TIME for the bastards who
claim to be employers. More like CRooks.

Gee...working at RS and paying the company for your
being only gotten with $85 per hour times three out of
the five you worked that day.

you must paid the RS heirarchy a bonus for not
being "working-working" as dictated to earn your 6
percent.

90 bucks at 6percent is 5.40. Big win. Let's see.
Work five hours and only sell required twice. you
sell 100 and 150....you get 15 bucks. The company
gets their money by not having to pay you for the
total sales you make at end of your shift.

So you do the following:

hour 1....85 bucks comm: none total daily sales
hour 2....100 bucks comm: $6.00 $591.
hour 3....150 bucks comm: 9.00 at 6 percent
hour 4....70 bucks comm: none total: 35.50.
hour 5....86 bucks. comm: none Loss: 20 bucks.

Now do that five times a week for four weeks and you are losing

80 bucks minimum from your paycheck. This money goes to
Radio Shack...you pay them.

This is a Rotten deal. You get paid a commission on Total
Sales for the day times number of days worked.

How does it feel to be paying the RS goons $20 per day?

Bet I know where it goes: INTO the nauseaus slogan being grilled into our subconscious daily: you have questions, we have answers" bs.

Talk about stupid peole working for smarter crooks.

Bill Conduit
etc.

2799. Pro 64- any good?

I know this is after the fact, but i recently bought a RS pro-64 on sale at RS for 199.00. Is this a good radio? I have a pro 2006 so i am really having a hard time adjusting to the limited frequency ranges. Any mods out there?
TIA
Phyllis

Radio shack is a great place for someone new to scanning, or communications in general, because you can get into the hobby for not much money. Once you decide to stick with it however, I have found that the lack of knowledgeable sales people, inferior products (when compared to other manufacturers), and the non-stop sales pitch (Hey mister! Want a cell phone? No, No, for the last time, NO!) are a big hassle.

It's been my experience (10 years +) that a radio shack scanner doesn't operate as well as nor last as long as a comparable Uniden or GRE scanner, even though they're made by the same companies. Most of the other Tandy brand electronics are about as desirable as generic beer, when compared to the other brands. I still shop there, but only for things like connectors, IC's and other miscellaneous parts that are hard to find elsewhere.

Just my opinion kids,
-Phil

And there's your other problem.

OK Greg, what you will definitely need to do is get a new antenna. A good CB mag mount, like a Wilson 1000 or similar brand will do the trick. I wouldn't try the Radio Shack brands, but you can if you want to save a buck or two. The truth is, they just don't work as well as the brand names. (Rat shack IS a good source for the PL-259 to BNC connector that you'll need, though.)

Anyway, the CB antenna will come with a good length of coax, so I'd stick it out the window and as high up as you can (like on the roof, if possible). That will probably help with the interference and definitely improve your reception.

Unfortunately your SC-150 is a dual conversion scanner (two IF stages), so it will pick up all kinds of noise, intermod and garbage flying through the airwaves, including noise from your PC (The monitor is the worst culprit). A triple conversion unit, like the new trunk trackers, does not pick up as much interference, thanks to the third IF stage. I would recommend a new scanner, but being on a budget myself, I know how hard that is to do. A good alternative would be a radio dedicated to aircraft. Rat Shack used to

sell a little pocket radio that you tuned with a thumbwheel for less than $20. I think they have upgraded it to a programmable one, but I'm not sure. A little bit of hacking will allow you to hook up the antenna I mentioned earlier. Even better, just about any military or electronics surplus store sells old VHF aircraft radios. (Don't transmit anything of course!) Anyway, that is a less expensive alternative to a new scanner, and you'll free up your SC-150 for other uses.

>Mike,
> Thanks for the kind words and pointer to my review! How are you
>and your X10 getting along?

My experience pretty much coincides with yours. I haven't found the
squelch as annoying as I'd imagined. VHF-lo is definitely the problem area
for spurious signals (oddly it gets TV audio in the cordless phone band
just like the AR8000 ... and nothing else).

The user interface, while vastly improved over the DJ-X1, still takes some
getting used to. The inability to easily go back and edit a memory
channel (i.e. to add a label directly) is turning into a major pain.

However I much prefer Alinco's text entry arrangement wherein the whole
display is filled with "where your cursor is in the alphabet" rather
than just displaying the selected letter. This lets you choose letters
a lot faster as you can anticipate when to stop clicking as you get nearer
to the letter you are looking for.

I still curse them for using proprietary battery packs (considering its
ham HT lineage I'm not surprised though) but compared to the Icom R10 it
takes a big hit in convenience factor. For now I'm trying Renewals in the
AA-cell case.

I paid $4 for mine that works with a nice RS discone antenna. (BTW,
What kind of work does it need?)

I'm not falling for a troll, am I?

732.400 Mhz is just below the frequency for the audio portion
of UHF-TV channel 57, which is at 733.75 Mhz.

Well Mark,

Your ht is good for line of site..... If you are not in range of a
repeater it's not going to get out more than a few miles unless you are
on a mountain top..... That old spark gap cw rig, although quite
dirty could have world wide capability.

>of it?
>I am just contemplating the purchase myself...

I have had mine for about a year......no , haven't found a lot of uses
for it. It really is a toy to me but I am sure others with a more
technical bent would get far more use out of it.
BTW...the ranges I quoted earlier are not necessarilly the device's
limits....just my recollections. But it is a near field device.
Maybe I would use mine more if I lived in an area where there was more
radio traffic....I have all the freqs I need for local scanning.
My only complaint is the built-in nicad pack....if it goes flat away
from a power source, it is useless. I always prefer portable devices
that allow battery replacement in the field.
Brian

What's more secure DVP or DES. My DES programming book states that DES uses 64 bit vs 72 bit for DVP key code. Sounds likes DVP may be more secure.

What about audio quality. On paper it looks the same. Anybody heard anything about someone "cracking" the codes yet?

From: mwojcik@ripco.com
Message-ID: <638kqv$s8c$1@gail.ripco.com>
Source record: 181781

I already own a handheld AOR... But I was wondering about base scanners.. Are there any differences... well, I should say ADVANTAGES to using a base unit.. Other than the obvious size and portability issues, is there anything they do with the extra size? Perhaps add an amp, or SOMETHING?

Now that I think about it, I have some other questions.. Is it worth it to get a scanner with a range above 1.3 Ghz? I don't see them too often and when I do, they are quite expensive.. It doesn't seem worth the money for the extra range..

Finally, I live in a suburban-type area, and I want to get better reception.. on the whole range... I don't want to spend more than $200 on an antenna, either.. Any recommendations for antennas that do a great job of increasing receive range?

Thanks!
Mike

If HF were obsolete, us technically-motivate folks wouldn't care enough
to try to get the (truly) obsolete Morse requirement for access to HF
dropped before ham radio implodes out of sheer backwardness.

> The reason for Morse code requirement was a dumbing down of the original
> requirement which was a practicum of building hardware. I think the
> Morse requirement should be replaced with the more applicable practicum.

The comment that comes out occasionally that we would be far better served
by a test in digital logic and microcontroller or DSP programming is QUITE
accurate and seems to go along with your suggestion.

Mike ... it has become abundantly clear that, for you, the question
pools issue is just an excuse. The pools have been, and are going
to continue to be, enlarged to the point where rote memorization of
the technical parts will be virtually impossible, yet you still bitch
and moan about it as an excuse to insist on maintaining the Morse text.

Why don't you just admit you want the Morse test for some real reason,
like "I had to do it ..." or "It keeps the bands from being overcrowded"
or "I like Morse and I'm afraid there will be nobody to beep with in a
few years if we don't force everyone to learn Morse." (all of which are,
of course, bogus reasons for maintaining the test, but at least one of
them, or something similar, would be more honest)

> I'm new to all this stuff.
>
> Can someone please explain to me what is AMPS? and What is NAMPS?

AMPS and NAMPS are analog formats developed by Bell Labs to use frequenices for cellular telephone use. Basically, it describes the forward and reverse data channels and how they're used, frequency assignment and re-use, assignment and use of phone numbers ("Numeric Assignment Modules"), how carriers are identified through an SID, etc.

AMPS stands for Advanced Mobile Phone Service (though by today's standards, it's not so advanced), and uses (if memory servers) 840 or so different channels. NAMPS is Narrowband Advanced Mobile Phone Service, and is basically an attempt to increase the capacity of this system by narrowing the bandwidth for each audio channel by half, effectively doubling call capacity. It requires a phone that can transmit and receive using the smaller bandwidths, however.

AMPS/NAMPS is basically what most cellular phones in the US are using today, though more peopl are starting to use Digital PCS formats (like GSM, CDMA and TDMA).

Its the RG-8 that makes all the differance. RG-58 is very lossy at VHF and above.
I'm an RF engineer and at the last place we worked Most RG-58 runs were kept to <6m
and that was a t HF. If the RG-8 is to stiff for you use RG-213 which is much more
flexible although slightly lossy but no were near as bad as RG-58.
As an aside during my high school days I couldnt aford the expensive stuff(RG-8) and
did a 10m run in RG-58 on 147MHz with 5 W in I couldn't move a 5W metre at the
antenna to tune the VSWR !!!

Regards
ERIC.

Richard,

The Hillsborough County, Florida, public safety trunked radio system was designed, manufactured and installed by Ericsson. The system has serious problems, so severe that communications on the east side of the county are still being simulcast on the old VHF frequency of 155.130. Apparently the problems are not as severe on the west side, as those communications are not entirely on the 800 MHz system.
While there are some software packages now under development and testing that will allow you to track an Ericsson system with a computer controlled scanner those programs are not yet available to the public.
Other than that, your only option is to take advantage of the Sheriff's Office's citizen purchase program. They will sell you a two-radio (with the transmit capability disabled) programmed for the east and west dispatch channels, for about $2,000.

The reason we should be allowed to listen to police broadcasts is because this is AMERICA. We are NOT a police state where the damn gummint DICTATES what you can and cannot listen to. I have aided my local police departments seven times after hearing reports and seeing wanted subjects. I have also been able to avoid trouble spots numerous times after hearing the calls on my scanner. Those who want to ban scanners are nothing less than tyrants. And you know what happens to tyrants in this country.

In California no permit is required. Anyone can have a scanner in their vehicle as long as it is not being used in the commission of a crime or some else illeagal.

I have had mine in the car for 20 years with many cops commenting that I have a better set-up than they do. Stay out of there way and they don't care.

Mike

I own a Radio Shack PRO-70 handheld scanner that I use as a
"knockabout" type scanner. It's not the best in the world, but it
gets the job done. I know that there are no 800mhz mods for this
scanner, but that's not what I'm interested in. Are there any mods for
increasing scan speed, boost volume through the earphone jack (i.e.
for race track use) or other types of useful deals.

Thanks, Mac

If the oscillator adjustment is a capacitor with a grounded tuning slot, that is probably a good tool for the job. I've seen that on lots of Motorola rigs.

Actually, AMPS since 1988, has 832 channels. before that, there wewre 666. Yes, that is right, 666! I am still amazed that a book on cell phones and the "AntiChrist" has not been written, because of that fact. Those 666 AntiChrist nuts maybe have not heard about the beginning number of channels.

Scott:

The code still has a use. During emergencies, remember why ham radio
exists, it does work. Perhaps it is a challange to learn but not
impossible. Those that fight the code are not willing to put the effort
forward to learn the code. You are right on target!

Last changed: October 16, 1997 |

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly. |

Models and Frequency Coverage |

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150

148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81. |

Minimum Volume Setting |

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely silence the receiver at minimum setting of the volume control. |

Tone Alert Feature |

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain. |

Repair and Replacement Parts |

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics |
PO Box 212 |
5138 Laurel Ln. |
Broad Run, VA 20137 |
telephone (540) 347-7760

You can also obtain Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone (800)972-3226.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and

feature priority scan and a separate trimmer capacitor for
each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X
SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from
the crystals used in the conventional single channel
Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

There are several ways:1. Find a friend who has a scanner and lives in the target zone. Get the friend to download the RealAudio server. Have your friend play the scanner through the RA server. Enjoy.
2. Find a commercial site like policescanner.com.
3. Move.

2871. Pro 2045 questions

I am considering buying a Pro 2045 and would appreciate any comments ,
pro and con from anyone who has used one.

I could use .WDB format, 123 format... ANYTHING but dBase!

SCANNER RADIO REVIEW BRIEFS

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET groups
rec.radio.scanner, alt.radio.scanner, and rec.radio.info.
It is also available electronically from the
rec.radio.scanner ftp archive on the official USENET FAQ
library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

Abstract

This article contains product review summaries for more than
70 old and new scanner radios and monitor receivers.

The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.

Introduction

At last count, there were over 140 scanners and monitor
receivers of various brands in my collection. This article
describes a few of the FM receivers in my collection, and
other models I've tested. It is not meant to be complete.

For more information about old scanners, see:

1. "Confessions of a Scanner Collector," by Bob Parnass,
Monitoring Times, August 1988.

2. "Scanner Collector Primer," by Bob Parnass,
Monitoring Times, May 1995.

I have published full length reviews and modifications of
these scanner models in Monitoring Times magazine:

Mar 1986 - Uniden/Bearcat BC800XLT
Mar 1987 - Radio Shack PRO-2004

Oct 1990 - Radio Shack PRO-2006
Jan 1995 - Radio Shack PRO-2035 vs. Radio Shack PRO-2006
Feb 1995 - Radio Shack PRO-62 Portable
Mar 1995 - Uniden/Bearcat BC9000XLT
Apr 1995 - Uniden/Bearcat BC3000XLT Portable
May 1995 - Uniden/Bearcat BC860XLT
Jun 1995 - Uniden/Bearcat BC890XLT & Radio Shack PRO-2036
Jul 1995 - Radio Shack PRO-2037
Aug 1995 - Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT
Sep 1995 - Radio Shack PRO-60 Portable
Oct 1995 - AOR AR-2700 Portable
Nov 1995 - selected AOR AR-8000 measurements
Dec 1995 - Radio Shack PRO-2040
Feb 1996 - Radio Shack PRO-2042
Apr 1996 - Uniden/Bearcat BC220XLT, BC230XLT Portable
Jun 1996 - modifications & tips for the Uniden/Bearcat BC9000XLT
Jul 1996 - Uniden/Bearcat BCT-10 mobile
Oct 1996 - Radio Shack PRO-2046 mobile
Dec 1996 - AOR AR5000
Jan 1997 - ICOM R8500
Feb 1997 - Radio Shack PRO-2045
Mar 1997 - ICOM IC-R10
Apr 1997 - RELM HS-200 portable
May 1997 - Uniden/Bearcat BCT7 virtual downconversion mod.
Jul 1997 - Uniden/Bearcat BC235XLT portable Trunktracker
Aug 1997 - Radio Shack PRO-64 portable
Sep 1997 - Stridsberg Engineering receiver multicoupler,
G/Wiz board for EDACS trunked scanning
Oct 1997 - Radio Shack PRO-67
Nov 1997 - Sporty's JD-100 Air Scan

Note: Reprints of Monitoring Times articles are available for $3.00 each plus a self-addressed stamped envelope from Grove Enterprises, 7540 Highway 64 West, Brasstown, NC 28902, tel. (800)438-8155. I don't receive any part of this reprint fee.

AOR

AR2700: 1995 vintage. 500 channel portable covering 500 kHz to 1300 MHz. Lots of good features, e.g., 10 linkable search banks, lighted keypad, per-channel attenuator, S-meter, battery meter, optional voice recorder and speech inversion descrambler. Global rescan and pause delays, but no auto store, data skip, nor battery saver. Internally generated noise results in broad birdies on AR2700 tested. Insensitive carrier operated (vs. noise operated) squelch stays closed on signals unless they are moderately strong, causing scanner to skip transmissions of interest. IFs are 287.55/749.25, 58.05, 10.7/0.455 MHz. See "The AOR AR-2700 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring

Times, October and November 1995.

AR5000: 1996 vintage. approx. 30 kHz - 2600 MHz coverage super receiver. Good sensitivity throughout. AM, SSB, CW, FM detectors. Frequency readout to 1 Hz. More features than any other radio. DTMF reader and RS-232 interface included. Multiple settings for IF and AF selectivity, attenuator, AGC, deemphasis, etc. DB9 RS232C connector. Negatives include low contrast LCD display and difficult user interface. NFM squelch closes slowly, causing noise burst at end of each NFM transmission. Electromechanical relays click at various frequency boundaries, including 400 MHz, producing a clickety-clack noise -- annoying while scanning banks of mixed band frequencies. Great radio, otherwise. See "AOR's AR5000 All-in-One Receiver," by Bob Parnass, in Monitoring Times, December 1996.

ICOM

R-10: late 1996 vintage (serial number 01048 tested). Shirt pocket size multimode is powered by 4 AA penlight cells. Covers 0.5 to 1300 MHz (minus cellular). NFM, WFM, USB, LSB, AM, and CW detectors included. IF bandwidths are fixed. No 30 kHz bandwidth for satellite or FM military monitoring. Battery saver circuit, with selectable duty cycle. Single VFO and 1000 memory channels. There are 900 memory channels divided into 18 banks of 50 channels each. Another bank of 100 channels used to hold unique frequencies found during an auto store operation. 20 pairs of search limits. Up to 100 frequencies may be locked out during a search and stored in a final bank of 100 channels which is cleared before subsequent auto store searches. Each channel can be programmed with the detector mode (e.g., AM, USB), a tuning step size, an attenuator enable flag, and an 8 character label. CI-V computer interface requires extra cost hardware. 7 segment S-meter. Noise blanker. Good sensitivity. Lighted keypad and display, but keystroke sequences are cumbersome.

Good radio hardware in a handy sized package, but scanning performance unimpressive. Very slow memory scanning at only 6 channels/second. Searches at about 16 steps/second, with little or no worthwhile improvement using the "Signal Navigator" feature in the R10 I tested. Rescan delay cannot be disabled. Can only scan one memory bank or all banks, not a combination of banks. No squelch for SSB or CW modes. See "ICOM IC-R10 Receiver," by Bob Parnass, in Monitoring Times, March 1997.

R-7000: 1986 vintage. At about $1000, this was once the top VHF/UHF receiver. 99 channel, multi mode coverage from 25-2000 MHz with a small gap at 1000-1025 MHz. Memory can

be expanded to 198 channels by adding simple switch to pin 19 of memory IC8. Tuning knob lets you tune through parts of the spectrum much easier than using the SEARCH mode on conventional scanners. Selectable USB/LSB allows reception of new amplitude compandored sideband (ACSB) stations. S-meter doubles as discriminator meter to aid tuning. Useful search and store feature, reminiscent of the the Bearcat 250, searches between 2 limits and automatically stores new frequencies into channels 80-99. Audio and control interface for tape recorder. Noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Searches and scans slowly but can be sped up to about 12 cps by adding a resistor. Too big for permanent mobile use, but too nice to leave alone in the car. If you don't want to spend $1000, get a Radio Shack PRO-2004/5/6 instead.

R-7100: 1992 vintage. At about $1300, this is the Cadillac of VHF/UHF receivers. 900 channel, multi mode continuous coverage from 25-2000 MHz. The radio RF/IF/AF portions of the R7100 are similar to the older R7000, but the R7100 is constructed using surface mount parts. Both the R7000 and R7100 are much more immune to intermod than the Uniden/Bearcat 760XLT and the portable PRO-43. The firmware in the R7100 is much more sophisticated. 9 banks of 100 channels. Further, you can associate each channel with 1 of 10 groups. Many possible ways to scan. 10 pairs of search limits. Search and store ("memory write") scan mode lets you store 100 frequencies instead of the 20 in R7000. Another R7100 improvement is that you can program up to 100 channels for the R7100 to skip while searching. R7100 has 2 VFOs ("windows"). Both the R7000 and R7100 scan slowly compared with PRO-2004 and PRO-2006, and that's a drawback. Both the R7100 and R7000 employ a noisy relay, activated when the receiver is tuned to frequencies above 520 MHz. Scanning a mixture of VHF and UHF frequencies serenades the ICOM user with a very annoying clickety-clack, clickety-clack! For Baseband Audio out, I mounted an RCA jack on the back of the R7100A and connected it via shielded cable to the junction of resistors R228 and R230 on the Main Unit. This point is located in the vicinity of IC15 and X3 on the schematic.

R8500: 1996 vintage. 100 kHz - 2000 MHz coverage. 20 banks of 40 channels although bank sizes can be changed. 100 Auto store and 100 Skip memories but that can be increased by reallocating channels from the conventional scan banks. Fixed and programmable step sizes. Relays clickey-clack while scanning across band boundaries. Triple conversion, First IF is 48.8, 778.7, or 266.7 MHz, depending on band. Second and third IFs are 10.7 and 0.455 MHz. Weak to moderate cellular images starting near 1106 MHz. Rugged

construction. External power supply. DB25 RS232C connector. Audio peak filter. Ok scanning and great searching performance. See "ICOM R8500 Receiver," by Bob Parnass, in Monitoring Times, January 1997.

UNIDEN/Bearcat and Electra/Bearcat

Bearcat III (Electra): 1976 vintage. 8 channel crystal controlled scanner. Requires optional front-end circuit board for VHF-low, VHF-high, and UHF bands, but only 2 boards can be installed within the radio at the same time. Two crystal filters. No aircraft band coverage nor rescan delay. Front mount speaker sounds good. Strong local oscillator radiation often causes interference with other scanners in the same house.

Bearcat IV (Electra): 8 channel crystal controlled scanner. Newer version of Bearcat III but contains front-end circuitry for VHF-low, VHF-high, and UHF bands. Better selectivity than Bearcat III or 12 due to having three instead of two 10.8 MHz IF filters. No aircraft band coverage. Front mount speaker sounds good. No rescan delay.

Bearcat 5 (Electra): 1979 vintage. Eight channel economy base model covering VHF-low, VHF-high, and UHF bands. 117 VAC only. No track tuning. Black plastic cabinet.

Bearcat 6 (Electra): Six channel VHF-low and VHF-high bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 8 (Electra): Eight channel VHF-low, VHF-high, and UHF bands. 117 VAC only. Wood covered particle board cabinet.

Bearcat 12 (Electra): 1979 vintage. One of the last decent crystal controlled scanners. 10 channels. Variable scan speed up to 20 ch/sec. Single delay on/off switch. Front mount speaker sounds good. Manual contains schematic. Single conversion, 10.8 MHz IF. Selectivity is poorer than programmable models, like the 300, allowing adjacent channel interference. Covers VHF-low, VHF-high, and UHF bands but no aircraft band coverage. Crystal positions must be arranged by band.

Bearcat 15 (Electra): 1983 vintage. Actually made for Electra by competitor GRE (General Research Electronics). The only Bearcat crystal controlled base/mobile scanner offering 118 - 136 MHz AM aircraft band. 10 channels.

BC101 (Electra): 1975 vintage. First Bearcat synthesized unit. 16 channels, no priority. Frequency programmed in binary by setting toggle switches on front panel after

looking up code in code book. No frequency readout. Uses custom IC for CPU, now discontinued, so factory authorized service is no longer available. I have four of these units. DC operation requires optional mobile power supply.

BC100 (Electra): First programmable portable scanner. Be prepared for at least one repair in the first year. Early units, with threaded antenna connector, have high frequency of repair, particularly LCD readout, keyboard, and battery holder. No battery backup. Poor case design in early units caused battery to disconnect from radio, resetting microprocessor and clearing memories. No priority channel or aircraft band. Some people swear by the BC100, others swear at them.

BC210 (Electra): 1979 vintage. First Bearcat scanner with a keyboard and numeric display. LED readout. See US patents 4,092,594, granted 5/30/78 and 4,114,103, granted 9/12/78 for further insight.

BC220 (Electra): 1979 vintage. 20 channels. Reasonable number of features but 20 channels doesn't seem enough. Service Search for Marine and Aircraft. See US patent 4,270,217, granted May 26, 1981. LED readout. Good scanner, but tinny audio.

BC20/20 (Electra): 1981 vintage. Similar to BC220 but with 40 channels and different CPU circuitry. A maximum of 20 channels can be scanned at one time. Reasonable number of features. Service Search for Marine and Aircraft. LED readout. Good scanner, but tinny audio.

BC250 (Electra): 1976 vintage. 50 channel model, rich in features, but lacks aircraft band and 144-146 MHz. Search and Store feature extremely useful for finding federal frequencies. Clock. High frequency of repair. Power transistors not heat sinked adequately, causing heat damage to surrounding components and circuit board. Failure of Q204 on the feature board known to cause odd display readings. Digital circuitry very sensitive to glitches caused by static and AC line spikes. Avoid 1978 or earlier vintage units. All BC250s use custom ICs (e.g., IC6, a divider chip, mfd. by Exar), which are now discontinued, so factory service is no longer available from Uniden.

BC260 (Electra): 1983 vintage. Super heavy duty metal cabinetry and lit controls, aimed at mobile use for firemen, police, etc. Few frills, only 16 channels, no aircraft, but generous coverage of federal bands omitted in the older Bearcat scanners. Good sensitivity. Lots of audio. Good internal construction. Backlit keyboard allows operation in the dark, but the keyboards on some units require high

pressure to operate. Brightness control for display and keyboard, but multiplexor circuitry for vacuum fluorescent display produces audible whine which may be annoying in a quiet room. Backlighting may fail in some units due to poor contact on connector used to fasten light panel to front circuit board. 9 volt regulator transistor Q28 (TIP29) may fail, causing blank display while leaving audio intact. Method of connecting an external speaker is awkward.

BC300 (Electra): 1979 vintage. 50 channel top of the line scanner. Service Search feature contains 11 ROM banks of preprogrammed channels See US patent 4,270,217, granted May 26, 1981. Switching power supply failure noted in early units due to insufficient capacitance - component value was changed in newer units. Schematics show at least 100 components changed between earliest and later units. Preset squelch pot, mounted internally on circuit board, misadjusted in new units - adjustment usually required after burn-in period. Good sensitivity. Built in clock. I leave it on 24 hours a day. This is a favorite. See US patent 4,409,688, granted 11/11/83 for further insight.

BC350 (Electra): 1981 vintage. 50 channels in 5 banks. Includes aircraft. Used to be Bearcat's top of the line, overpriced scanner but never very popular. Dual use keyboard and display allowed 8 text characters to be associated with each channel, a feature clumsily implemented, and awkward to use. Units plagued with various hardware problems including bad memory ICs and short life power transformers. Firmware bugs without cures. The BC300 is a much better scanner than the BC350, and at a lower price.

BC760XLT (Uniden): Also sold as BC950XLT through Scanner World. Small, mobile scanner supplied with mounting bracket and wall wart AC power supply. Some of the keys are backlit. 100 channels in 5 banks. Service search. Earlier version has Motorola type antenna jack and AA battery backup. Later version has BNC antenna jack and internal lithium battery. Can be fitted with optional CTCSS decoder. Hyper sensitive and easily overloaded by strong signals, especially when used with outdoor antenna in base applications. Conventional 10.8 MHz IF prone to images. Television audio heard in some places.

BC800XLT (Uniden): 1985 vintage. 40 channels in two banks. Covers 806-912 MHz, as well as of vhf, uhf, and aircraft bands. Receives 10 meter fm and all of 6 meters, as well as federal portions of vhf and uhf bands. Fewer birdies on vhf-lo band than other scanners. Scans and searches very fast. Clean, robust audio output. Extremely sensitive, but

very prone to overload by strong signals when connected to outdoor antenna. Too much play (hysteresis) in squelch adjustment - can be improved by changing one resistor. Positive terminal in memory backup battery holder installed backwards in early units, allowing memory loss when scanner unplugged from AC outlet. Tunes in increments of 12.5 KHz on 800 MHz band, whereas cellular telephones are on 30 KHz channels. See "The Bearcat 800XLT ... an Owner's Report," by Bob Parnass, in Monitoring Times, March 1986.

BC860XLT (Uniden): 1995 vintage. 100 channel table top unit. Can lock out 10 channels during search. Good performer except for images. See "The Uniden Bearcat BC860XLT," by Bob Parnass, AJ9S, in Monitoring Times, May 1995.

BC890XLT (Uniden): Same as Radio Shack PRO-2036. Tuning knob. 200 channels, global delay. Count, AUX, and Auto Store features. Scans and searches fast. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IF -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

BC9000XLT (Uniden): 1995 vintage. High quality base using up-conversion. 500 channels in twenty banks. Up to 250 channels can be programmed with alpha labels. Tuning knob. Selectable AM, NFM, WFM modes. Optional CTCSS decoder. Very fast scan and search. Can lock out 50 channels during search. Delay and attenuator independently programmable for each channel. Effective Auto Store feature stores unique frequencies. Good RF section, but not as robust as PRO-2004/5/6. IFs are 380.7/254.4, 58.075, 0.455 MHz. One urban user, located within a couple of blocks of several high power transmitters, reports severe desense problems. For a full review, see "The Uniden Bearcat BC9000XLT," by Bob Parnass, AJ9S, in Monitoring Times, March 1995. For tips and modification information, see my column in June 1996 Monitoring Times. See US patents 4,947,456, granted 8/7/90, 5,163,161, granted 11/10/92 and 5,212,817, granted 5/18/93 for further insights into fast scanning and searching implementation.

BC100XLT (Uniden): 1987 vintage. Very good 100 channel portable with 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Generous coverage of conventional bands, including commercial aircraft, but no 800 MHz. Decent leather-like case. Slide-on 550 mAH NiCd battery pack.

BC200XLT (Uniden): 1987 vintage. Also sold as BC205XLT through Scanner World. Very good 200 channel version of BC100XLT portable scanner but includes 800 MHz band. 10 priority channels. Unique feature tells whether a given frequency has already been memorized. Decent leather-like case. Slide-on NiCd battery pack.

BC220XLT (Uniden): 1995 vintage. Very good 200 portable scanner which is a smaller successor to the BC200XLT. Includes 800 MHz band. 10 priority channels. Service Search, including WX. Up to 10 frequencies can be locked out during conventional search, 20 frequencies from Service Search. Unique feature tells whether a given frequency has already been memorized. 10.8 MHz and 450 kHz IFs, with images 21.6 MHz away. 4 cell BP-120 internal NiCd battery pack. Marketed as BC230XLT with two BP-120 battery packs and CRX-120 dual charger. See "The BC220XLT/BC230XLT Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1996.

BC230XLT (Uniden): See BC220XLT.

BC235XLT TrunkTracker(Uniden): 1997 vintage. Portable with 300 channels in 10 banks. Can scan or search in conventional or trunked domains but not at the same time. Scans Motorola Type I, II, IIa 800 MHz trunked systems, but only one trunked system at a time. Programming Type I and IIa systems requires knowing the Fleet Map ahead of time or else using exhaustive trial and error. A query feature identifies duplicate memory channels. Very fast scan and search rates. Scans 64 channels/sec and skips empty channels. Service search. Data skip. Triple conversion, 254.4, 10.85, 0.45 MHz IFs. Excellent image rejection and intermod immunity. Fairly good audio. See "The Uniden Bearcat BC235XLT," by Bob Parnass, AJ9S, in Monitoring Times, July 1997 or an on-line version at www.grove.net.

BC2500XLT (Uniden): 400 channel portable with tuning knob. Plagued by intermod and images. Early units drained batteries quickly even while turned off.

BC3000XLT (Uniden): 1995 vintage. Excellent 400 channel portable with 20 banks. Up conversion. Very fast scan, search, and intelligent Auto Store. Mode, attenuator, and delay settings programmable for each channel. 50 frequencies can be locked out during search. Larger speaker than PRO-26 produces better, crisper audio. NiCd pack provides about 5 hours between charges. See "The Uniden Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, April 1995 and "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

Regency

TMR series: First generation crystal scanners. Come in all varieties of band coverage. Models with both UHF and VHF bands must use separate antennas for each band (disadvantage in mobile installations, but can be overcome by connecting two front ends via a capacitor). Not sensitive enough to cover the entire 30 - 50 MHz range in a single model. There three versions of VHF-low band coverage depending on the part of the 30 - 50 MHz band covered (LL, LM. and LH). TMR scanners use unsocketed incandescent bulbs for channel indicators which require periodic replacement. Easy to crystal: Radio Shack crystals work well. TMRs usually $2 and up at hamfests, often in poor condition. Don't pay more than $50, even if mint. Front ends must be tuned for selected portions within the bands for best sensitivity. Wide IF selectivity troublesome in urban/suburban areas. Primitive digital scanning circuitry may become confused at times. but power off/on restores sanity. Replace aging capacitors in the scanning circuits. You can find a TMR8H eight channel high band unit most often.

TME series: The base versions of the TMR models. Both the TME and TMR models share many common circuits but the base versions contain speakers mounted on the front panel. The most common TME model is the TME8 H/LM eight channel dual band scanner in a metal cabinet with wood coloring.

ACTR series: Replaced the Regency TMR units. By the time Regency made the ACTR units, they no longer offered different models for different parts of the 30 - 50 MHz band. Look for the later ACT series, e.g., ACTR-106 (10 channel tri band) or ACTR20/6 (20 channel tri band), used light emitting diodes for channel indicators instead of incandescent bulbs. Available in 1 to 20 channel models - most are multi band receivers. Somewhat wide selectivity. Not all that bad a deal if cheap.

ACTE series: The base versions of the ACTR series. The ACTE and ACTR circuitry is similar, although the base versions contain speakers mounted on the front panel. The most common ACTE model is the ACTE8 H/L eight channel dual band scanner in a black metal cabinet.

WHAMO-10: Regency's first synthesized scanner. Appearance more like a crystal scanner, with a single LED per channel. User has to break off teeth on a metal 'comb' for each channel according to a code book. See US patent 4,057,760, granted 11/8/77. External frequency control unit DFS-5K optional. UHF VCO reference oscillator drifts on some units. Soldered sheet metal shields around some circuitry make access to some components difficult for servicing. Comb sockets prone to bad connections after moderate use. Not

recommended due to maintenance difficulties.

K500: Nice wood-like cabinet. 40 channel model with every feature Regency could dream of in one scanner, except aircraft band. Idle tone bypass feature for mobile phone stations works about 50% of the time. Weather alert feature. Service Search in several banks. Search and Store facility not implemented as well as BC250, but better than none. Built in clock when radio off or in manual mode. Can be programmed out of band. Reasonable performance, but sensitivity could be better. Spring contacts on membrane keyboard may need soldering after prolonged use.

K100: Bare bones version of the K500. 10 channels, no priority feature. Same wood-like cabinet and reasonable performance as K500. Spring contacts on membrane keyboard may need soldering after prolonged use.

M400: 30 channel replacement for K500. Service Search, but no aircraft. Easily programmable out of band. Built in clock when radio off or in manual mode. Backlit keyboard good for night viewing and mobile use but generates RFI into nearby SW receivers. A favorite.

MX3000: 30 channel replacement for M400, but basic features only. Nice lit keyboard, but may cause RFI into nearby SW receivers. Easily programmable out of band, but no aircraft. All 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Good first scanner.

M100: 10 channel unit. Same as MX3000 except different color and fewer channels. Nicely lit keyboard, but may cause RFI into nearby SW receivers.

HX1000: Good, fairly rugged, 30 channel handheld synthesized unit. Generous out of band coverage but no AM aircraft coverage. Built by Azden. Very sensitive on UHF, but annoying audio hiss leaks through speaker when squelched. Belt clip chintzy, but can be directly replaced with better clip from Kenwood TR2600A. Like the MX3000, all 30 channels are in a single bank, and lack of direct channel access make this model more difficult to operate. Low discount price makes this best choice for programmable portable.

HX650/H604: 6 channel crystal portable. Likely made by Sanyo. Same as Fannon and Bearcat Thin Scan units, (except that Bearcat has 10.8 MHz IF frequency, and is harder to get crystals for), but scans faster. Small size and common crystals (available at Radio Shack), make this 1st choice for bare bones portable scanner.

Z60: base/mobile sporting 60 channels, but 10 of them are for FM broadcast only. Built in alarm clock, priority, and memory which requires no battery backup. Covers 30 - 50, 88 -108, 118-136, 144-174, 440-512 MHz. Notice that it's not spec'd to cover some important federal bands: 136 - 144 and 406 - 440.

RELM

HS200: 1996 vintage. Very good 200 channel portable. 10 banks. Built-in CTCSS and DCS decoder. Lighted keypad. Duplicate channel detection. 100 frequencies can be locked out from search. Very good audio and strong front end. Excellent internal shielding. Global rescan delay. Covers CB. Fixed modes and step sizes. IFs are 280.2 and 0.45 MHz, and perhaps one in between. For a quantitative test report, see "The RELM HS-200 Portable Scanner," by Bob Parnass, AJ9S, in Monitoring Times, April 1997.

Radio Shack

PRO-2004: 1986 vintage. Top of the line, wide band scanner for 1987. After a diode is cut, enjoy continuous coverage from 25-520 and 760-1300 MHz, AM, NBFM, and WBFM. Has 300 channels in 10 banks of 30, backed up by conventional 9 volt alkaline battery. Any channel can be designated the priority channel. Scans and searches fast. Lots of well designed features, like 10 pairs of search limits, Lockout Review, default search increment and emission mode. Sound Squelch allows skipping dead carriers during search or scan. Metal cabinet, good internal construction and shielding, but no mobile mounting bracket or DC power cord. Soft touch membrane keyboard. Good sensitivity and selectivity. Very good radio. See "Product Review: The Radio Shack PRO-2004 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, February 1987, and Monitoring Times, March 1987.

PRO-2005: 1989 vintage. Essentially a size reduced PRO-2004 with surface mount components and 400 channels. Some people think the small knobs, smaller display, and plastic cabinet are a setback from the 2004. The smaller size, real rubber keyboard, and vertical front panel make it easer to use mobile, although the keyboard is not backlit. More sensitive than the PRO-2004 but 800 MHz signals leak through into the commercial aero band. Highly recommended. See "Product Review: The Radio Shack PRO-2005 Programmable Scanner," by Bob Parnass AJ9S, in The Radio Enthusiast, June 1989, and RCMA Journal, August 1989.

PRO-2006: 1990 vintage. Essentially the same as PRO-2005 but scans faster. Probably the best scanner made to date. Highly recommended. See "The Realistic PRO-2006," by Bob Parnass, AJ9S, in Monitoring Times, October 1990.

PRO-2035: 1995 vintage wide coverage base made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. Broader IF selectivity than PRO-2006. Poor dynamic range. 10 linkable search banks. Dumb Auto Store feature stores the same frequencies over and over. Wastes time scanning empty channels. See "The Radio Shack PRO-2035 - How Does It Compare With the PRO-2006?," by Bob Parnass, AJ9S, in Monitoring Times, January 1995.

PRO-2040: late 1995 vintage 100 channel base made by Uniden. Fair performance, but minimal image rejection. Local oscillator harmonics account for spurious responses, e.g., reception of cellular telephone calls in the 460 MHz UHF-high band. Scans over 40 channels/sec. Can lock out up to 50 channels from search. "Soft" on/off power switching via keypad. See "The Radio Shack PRO-2040," by Bob Parnass, AJ9S, in Monitoring Times, December 1995.

PRO-2042: 1996 version of the wide coverage PRO-2035 base with improved firmware and amber display. Made by GRE. 1,000 channels, but cumbersome 100 channel bank size. Tuning knob. NFM selectivity is still a problem but improved over PRO-2035. 10 linkable search banks. Smart Auto Store feature stores the unique frequencies. Can lock out up to 200 frequencies from search. Query facility indicates if and in what channel a frequency is programmed. Scan skips over empty channels automatically. Can sort memories by frequency within a given bank. IFs are 609 - 612, 58.05, and 10.7/0.455 MHz. Broader IF selectivity than PRO-2006. Overall, a top grade scanner and second only to Uniden/Bearcat BC9000XLT. See "The Radio Shack PRO-2042," by Bob Parnass, AJ9S, in Monitoring Times, February 1996.

PRO-2045: 1996 vintage. Very good 200 channel base/mobile made for Radio Shack by Uniden. Tuning/channel selector knob. 10 banks, selectable attenuator, and rescan delay. CTCSS-capable with optional board. Great Auto Store. Weather alert. Scans and searches fast. Can lock out 50 frequencies during search. Step sizes fixed but AM and NFM modes are selectable. IFs are 380.7, 10.7, and 0.455 MHz. Images on VHF-high band despite high 1st IF. Some intermod on review unit. See "The Radio Shack PRO-2045," by Bob Parnass, AJ9S, in Monitoring Times, February 1997.

PRO-2046: 1996 vintage 100 channel mobile made by Uniden with fairly good performance. Descendent of the BC760XLT but no CTCSS option available. Ten banks of ten channels. Scans memory at about 34 channels/sec. Service search, direct search, and band search. Preset search limits by band and user cannot program the search limits. Image rejection is minimal, as one would expect from a scanner with IFs of 10.85 and 0.450 MHz. 10 Monitor memory

channels. Can lock out up to 20 channels from a search. See "The Radio Shack PRO-2046," by Bob Parnass, AJ9S, in Monitoring Times, October 1996.

PRO-34: Portable scanner with 200 channels and 800 MHz coverage. Ten "monitor" channels. Operates from AA cells. Slow scanning, low audio output, and chintzy plastic case detract from an otherwise good performance. No decent leather case available from Radio Shack. If you need a portable with 800 MHz, get a Bearcat 200XLT. If you can't get a 200XLT, get a PRO-34.

PRO-2021: Base/mobile scanner. 200 channels in 10 banks, LCD display and raised rubber keys. Lots of memory but scans too slowly and lacks 800 MHz. Ten "monitor" channels. Radio Shack seemed to have an overstock of 2021s as they were on sale for such a long time. Close out price dipped to about $200, which made it a nice scanner for beginners.

PRO-2022: Base/mobile scanner. Like the PRO-2021 but includes the 800 MHz band. Cellular images throughout the 847.6 - 869 MHz range. Includes power saver circuit, odd for a base unit, which can clip the first part of a transmission. See September 1996 Monitoring Times for modifications.

PRO-2036: Same as Uniden/Bearcat BC890XLT. Tuning knob. 200 channels, global delay. Scans and searches fast. Count, AUX, and Auto Store features. Accepts optional CTCSS board. Dual conversion with 10.8 MHz and 450 kHz IFs -- lots of images and birdies. Prone to severe intermod, especially when used with an outdoor antenna. See "The Uniden BC-890XLT and Radio Shack PRO-2036," by Bob Parnass, in June 1995 Monitoring Times.

PRO-2037: 1994 vintage. Triple conversion all plastic base scanner made by GRE. Home version of the PRO-62 portable but with more intermod. 200 channels in 10 banks, one search bank, selectable AM and FM. Uses up conversion circuitry but inadequate front end filtering still allows images, though not as bad as in 10.7 or 10.8 MHz IF circuits. Crisp, respectable audio given the top mounted speaker. See "The Radio Shack PRO-2037," by Bob Parnass, in July 1995 Monitoring Times.

PRO-2001: Early, single bank 16 channel programmable. Reasonable coverage of the 3 traditional bands, minus aircraft band. LED digital display as well as an LED per channel. Mechanical lockout switch for each channel. Delay is either on or off for all channels at a time. High synthesizer noise level. Troublesome plated through holes on digital board in some units renders radio virtually

unfixable. Could never get mine to work more than a few days in a row; always another bad connection. Some owners have no trouble.

PRO-52: 8 channel VHF-Lo/Hi base unit. No UHF band or provision for mobile operation. Good little scanner despite limited frequency coverage and Spartan lack of frills. Crisp squelch action and good audio, helped by a front mounted, vertical speaker.

PRO-2003: Radio Shack's 1986 top of line. 50 channels + 10 FM commercial broadcast band channels. Includes aircraft. Good frequency coverage and functionality, but at a high price. Poor human engineering: difficult to read keyboard makes the PRO-2003 hard to operate unless in a well lit room. Keyboard label coloring improved on newer units. Rather slow scan rate and high price. Although there are provisions for 12VDC operation, the cabinet shape and lack of mounting bracket makes mobile operation impractical. Scan rate only 8 channels/sec vs. 15/sec in Regency and Bearcat. Causes RFI: Plastic case permits scanner to radiate signals into nearby receivers.

PRO-43: Very good portable made by GRE. First Radio Shack portable with up conversion, and 222 MHz ham and 225 - 400 MHz military air band coverage. 200 channels, single search range. Small, convenient size. Muffled audio. Speakers in early units known to fail and more powerful speakers were used in later units. 800 MHz band coverage fully restorable in early units by removing diode. Uses same 6 cell battery tray as other high end GRE portables. Subject to interference in 160 - 162 MHz range.

PRO-60: 1995 vintage. Very good portable made by GRE. 200 channels, single search range. Similar features and same IFs as the PRO-43 it replaced but the PRO-60 has wider frequency coverage and crisper audio. Covers 75 MHz and commercial FM broadcast bands. Improved Direct search can be stepped manually in single steps. Uses same 6 cell battery tray as other high end GRE portables. Railfans take note -- the PRO-60 and PRO-43 are subject to interference in 160 - 162 MHz range. Draws 100 mA while scanning. See "The Radio Shack PRO-60 Portable," by Bob Parnass, AJ9S, in Monitoring Times, September 1995.

PRO-26: 1995 vintage. (Not to be confused with a simple 1985 crystal controlled portable bearing the same model number.) Very good portable made by for Radio Shack by Uniden. 200 channels, very fast scan/search. Good display. Covers all TV channels, but spectrum adjacent to cellular phone band is censored which prevents monitoring parts of some trunked systems (e.g., IL State Police district 4). Up to 50

frequencies can be skipped during search. Limited image rejection causes 929 MHz paging interference in 170 MHz range. IFs are 380.7/254.4, 58.075, and 5.5/0.455 MHz. Audio suffers from small speaker. See "The Radio Shack PRO-26 vs. Uniden/Bearcat BC3000XLT," by Bob Parnass, AJ9S, in Monitoring Times, August 1995.

PRO-62: 1994 vintage. Good portable 200 channel scanner using up conversion. Similar to PRO-43 but no military air band, different upper frequency limit, and slightly different IFs. Selectable AM/NFM modes. Better intermod immunity than PRO-43. See "The Radio Shack PRO-62," by Bob Parnass, AJ9S, in Monitoring Times, February 1995.

PRO-64: 1997 vintage. Good portable 400 channel scanner using up conversion. Replaces PRO-62 and has many more features. Selectable AM/NFM modes but fixed step sizes. 10 search banks which can be cascaded. Auto store saves unique frequencies found during a search. Frequencies can be loaded using a computer but optional interface kit not yet available. Can recharge Radio Shack's optional, monolithic NiCd pack, but not AA cells within the scanner. IFs are 257.5, 21.4, and 0.455 MHz. See "The Radio Shack PRO-64," by Bob Parnass, AJ9S, in Monitoring Times, August 1997.

PRO-67: 1997 vintage. Good portable 200 channel scanner using up conversion. Replaces PRO-51 and has better image rejection and super fast scanning. Service Search lacks police frequencies. Fixed AM/NFM modes and step sizes. Can lock out up to 20 frequencies during a search. Can recharge both Radio Shack's optional, monolithic NiCd pack, and AA cells within the scanner. Frequencies adjacent to the cellular phone bands censored so our PRO-67 will not receive 868.9625 or 823.9625 MHz. Intermediate Frequencies are 254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67," by Bob Parnass, AJ9S, in Monitoring Times, October 1997.

PRO-30: 16 channel programmable portable with aircraft band. Good frequency coverage. Extra controls on top allow control of SCAN, MANUAL, and PRIORITY functions while worn on belt. Good belt clip. Low audio output. Plastic case prone to break at BNC antenna connector under severe use, vs. metal frame in Regency HX1000. High price, no discounts or sales yet. I had 6 or 7 PRO30s, having to return them several times during the 1 year warranty, although other owners have had little or no trouble. Troubles included oscillation in IF stage, no UHF band reception, case broken around base of antenna connector, etc.

PRO-24: 1983 vintage. Only 4 channels in this crystal controlled portable. Covers the three basic bands, but no aircraft. Easy to obtain batteries and crystals.

Characteristic Radio Shack squelch problem, fixable by changing one resistor. All-plastic case larger than Bearcat Thin Scan and clones. See "The Radio Shack PRO-24 Scanner," by Bob Parnass, excerpted in the "Technical Topics" column, RCMA Newsletter, February 1984.

SPORTYS

JD-100: 1997 vintage. Limited 20 channel scanner which covers civil and military air bands only. Good audio. Large display shows frequency only out to 2 digits. Slow scanning and odd keystroke sequences. No key press confirmation beep. Cannot lock out channels from memory scan. Powered by AA batteries. Battery saver circuit. See "Sportys JD-100 Air Scan," by Bob Parnass, AJ9S, in Monitoring Times, November 1997.

Craig (division of Pioneer)

4530: Japanese 10 channel crystal controlled 3 band unit. Also available under Plectron name but in different cabinet. No aircraft band. Deluxe features like priority, trimmer capacitors for netting each channel, front panel speaker, and rugged metal cabinet make this unit a winner. Channel lockout slide switches have finite life. Replacing burned out incandescent channel lamps not fun. Grab a 4530 if you find one in good condition.

Sonar

Sonar made several crystal controlled scanners and channelized monitor receivers which shared the same RF circuitry. Each radio was housed in the same size metal case and worked on both 120 VAC and 12 VDC. The models differed in the number of channels, the band coverage, and whether individual channels could be locked out.

Although they used a 10.7 MHz first IF, Sonar radios require parallel resonant crystals different from the common series resonant crystals used in Regency and Radio Shack scanners. Some Radio Shack crystals will work in Sonar units, but more often they oscillate a few kHz off frequency and are unsuitable unless changes are made to the oscillator circuitry. Therefore, beginners should avoid these radios. Typical Sonar squelch has long time constant causing a long noise burst at the end of each transmission.

FR-104, FR-105: 6 channel monitor receivers covering 25 - 50 MHz or 150 - 175 MHz. Manual channel selection, i.e., no scanning. Early models are identified by an 11 pin connector on the rear and they could be used with an optional NiCd battery pack and charger which bolted to the rear panel. Later models used Cinch Jones connectors with

flat contacts. Optional tone decoder board.

FR-2512, FR-2513: 24 channel versions of the FR-104 and FR-105 monitor receivers. Manual channel selection, i.e., no scanning.

FR-2514, FR-2515: 8 channel scanners. Channel 1 priority. Recommend you avoid these models as there is no way to lockout a channel from the scan sequence.

FR-2526, FR-2526, FR-2528: 10 channel scanners covering various combinations of 3 bands. Each channel could be locked out. Channel 1 priority.

Sonar Model	#chan- nels	VHF low	VHF high	UHF scans?	lock-outs?
FR104	6	X		no	
FR105	6	X		no	
FR2512	24	X		no	
FR2513	24	X		no	
FR2514	8	X		yes	no
FR2515	8	X		yes	no
FR2516	10	X		yes	yes
FR2517	10	X		yes	yes
FR2525	10	X		yes	yes
FR2526	10	X	X	yes	yes
FR2527	10	X	X	yes	yes
FR2528	10	X	X	yes	yes

Table 1. Summary of Sonar base/mobile monitor and scanner receivers

Tennelec

Manufactured the first synthesized scanners. See US patents 3,961,261 and 3,962,644, granted 6/1/76 and 6/8/76 respectively. Company went out of business several years ago. Schematics and parts difficult to obtain. Radios reputed to be poor performers. Got my MS-2 and MCP-1 basket cases for free and sometimes regret taking them. Not worth fixing unless you have access to DTL/RTL chips and circuit diagrams.

Plectron and Motorola Alert Monitor Receivers

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their transistor Plectron and Motorola Alert monitor receivers. They have now been replaced by portable pagers, and are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola Alert crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. These radios are fixed channel units and do not scan. They can be powered form 117VAC or 12VDC with the proper mobile cord.

The audio quality on a Plectron P1 or 700 series is far better than any consumer grade scanner and the sensitivity and intermod immunity is outstanding if aligned properly. Better image rejection than most scanners (see article by Bob Parnass in Monitoring Times, January 1996 for comparison). The Plectron 500 series is less desirable. The Motorola Alert monitors are pretty good, although the audio lacks bass.

No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, and there were versions optimized for each portion of the band. There were different "split" models to cover segments of VHF-hi band, too. Although UHF versions were made, they are somewhat rare.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency. Too, the P1 and R700 require different crystals.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Repair service for the Plectron P1 and R700 models is offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal Signal in University Park, IL, phone (800)524-3021. For more information, see "Add a Crystal Receiver to Your Arsenal," by Bob Parnass, January 1996 Monitoring Times.

Custom Color Map & Report
of Transmitter Sites Near You

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the

country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $4.00, I will include a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas

Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

How to Obtain Copies of Patents

Printed copies of US patents may be purchased for $3 each, but you must know the patent number. Credit card orders are taken over the telephone by the Assistant Commissioner for Patents at (703)305-4350. Alternatively, you can mail a check or money order, made payable to "The Assistant Commissioner for Patents" to

The Assistant Commissioner for Patents
Washington, DC 20231

For more information about the US Patent and Trademark Office, call their automated information message system toll-free at (800)786-9199.

There are various patent servers on the world wide web, including IBM's server:

REPAIR TIPS: RADIO SHACK SCANNER RADIOS

Copyright 1997 by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner,
sci.electronics.repair, and rec.radio.info. It is also
available electronically from the rec.radio.scanner ftp
archive on the official USENET FAQ library
ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.
The author writes a monthly "Scanner Equipment" column for
Monitoring Times magazine, published by Grove Enterprises,
but views expressed in this article are his own.]

Introduction

Radio Shack has been selling scanners and monitor receivers
under the Realistic and Radio Shack labels for over 30
years. Most of them were manufactured by General Research
Electronics of Tokyo, though many newer models are
manufactured by Uniden.

The date of manufacture is usually printed on a gummed
label on the scanner as well as the cardboard box. A code
of 12A5, means the scanner was made in the 12th month of
1975, 1985, or 1995, for example.

There's another way to date Radio Shack scanners
manufactured by Uniden. The first digit of the long serial
number is usually the last digit of the year of
manufacture.

Another way to roughly estimate a radio's age is to examine
the 4 digit date codes often stamped on the integrated
circuits. The radio must have been made after the most
recent date stamp.

Schematics, Owner's Manuals, and Parts Available

Service manuals for most Radio Shack scanners may be ordered through your local Radio Shack store.

If Radio Shack doesn't have a schematic, try obtaining a Photophacts from Howard Sams Publishing division of Prentice-Hall at (800)428-7267, http://www.hwsams.com/sams_model_new.html

Parts lists for recent models are available on line at: http://support.tandy.com/support_electronics/2849.html. Parts may be ordered through Tandy National Parts, telephone (800)442-2425 or (817)870-5600, or through your local Radio Shack store

G & G Communications (telephone (716)768-8151) is a family owned company which repairs scanners and stocks parts for several older models, especially Electra/Bearcat and Regency brands, but they don't sell manuals or schematics. They are located at 9247 Glenwood Drive, LeRoy, NY 14482. (http://www.iinc.com/ggcomm/ or email ggcomm@iinc.com or ggcomm@aol.com)

GRE-Built Base Models: Dim Backlight

The backlight in many base models, including the PRO-2022, PRO-2004, and PRO-2005/6 is implemented by an electroluminescent panel, which grows dim with use.

The EL panel used in the PRO-2005 and PRO-2006 is designated EL-501, and is identified by Radio Shack part #10800050. A new EL panel can be ordered through your Tandy National parts (see above) or local Radio Shack store and sent to your home. Radio Shack no longer sells replacement EL panels for the PRO-2004.

Replacing the backlight is an operation which requires care and patience. Purchase a service manual, and study the exploded parts diagrams as you read the following steps.

Top and bottom cabinet pieces must be removed, then the speaker unplugged from the main board. The front panel assembly must be removed from the chassis by removing 4 flat head screws, 2 on each side. You need not disconnect all the wiring harnesses, though you might have to unplug one so it won't get in the way of a hot soldering iron.

Unsolder the bare ground wire soldered to a large shield on the back of the front panel, located near the back of the squelch control. Two ground braids must be temporarily disconnected by removing the screws which fasten them to the chassis. After removing the volume and squelch knobs, you must remove 8 small screws which fasten the plastic front panel to the diplay board.

The old EL panel is fastened by a bead of glue and two foil type leads soldered to the display board. It's easier to cut the two leads from the old EL panel before unsoldering. A sharp knife should be used cut away the glue. The old EL panel can then be slid gently out from behind the LCD display.

The new EL panel can be installed by reversing the process, though I found that it is not necessary to glue the new panel. The two foil leads must be soldered using a minimum of heat. Reassemble the pieces in reverse order of disassembly.

GRE-Built Portables: Worn Out Keypads

The keypad on late model GRE-made Radio Shack portables, e.g., PRO-39 and PRO-43, can become unreliable after prolonged use. The best repair is to replace the rubber keypad instead of trying to restore contacts using chemicals. A replacement rubber keypad may be ordered inexpensively through Tandy National Parts or your local Radio Shack Store.

PRO-43: Loss of Audio

Early PRO-43s were built with a 200 mW speaker (mfr's part #EAS-3P123A). The voice coils in some of these speakers have opened, resulting in lack of audio output, though audio is still available from the earphone jack. A more capable 500 mW speaker is available through Tandy as replacement (EAS-3P127).

PRO-43: Freezup

If you attempt to lock out all 20 channels in a memory bank, then scan only that bank, your PRO-43 will freeze up and be placed into a catatonic state. Use the procedure documented in the PRO-43 user manual to fully reset the scanner. This will "break the trance," but all the memory channels will be cleared. |

PRO-2004: Dead |

If your PRO-2004 is completely dead, check R235, a 1 ohm, 1 | watt resistor mounted vertically on the main board.

2875. BC-760XLT channel mod question

Newsgroup: rec.radio.scanner
Date: 1997-10-31 00:00:00 UTC
From: kjsmith@fletch.fix.net
Message-ID: <63cv9k$htf@fletch.fix.net>
Source record: 181572

I came across a mod for the Uniden BC-760XLT to add 100 more channels (switched in via a toggle switch). The mod stated that the lockouts and scan delays will be the same as in the first bank, but what about CTCSS?

I can live with having the lockouts and delays set for both banks (not many channels locked out, and delay is on all but a couple of channels), but CTCSS differences would render the mod mostly useless. Anyone having the CTCSS board that's done the mod know the skinny?

2876. DISASTER COMMUNICATORS NEEDED IN SO-CAL

Newsgroup: rec.radio.scanner
Date: 1997-10-31 00:00:00 UTC
From: sctreact@aol.com
Message-ID: <19971031153400.KAA05502@ladder01.news.aol.com>
Source record: 181573

DISASTER COMMUNICATORS NEEDED:

The IMPACT Disaster Response Unit is looking for volunteers to help staff a one-of-a-kind Disaster Response Unit. The IMPACT Unit is on-call with most public service agencies through-out Southern California. These agencies include Fire, Police, Sheriff, CHP and more.

With the expected winter storms of El-Nino, IMPACT is going to be very busy and can use lots of help. We utilize all types of communications; including CB, Amateur, GMRS, FRS, VHF/UHF Commercial Bands, Cellular and more. You do not need any special training or equipment to be part of this unit.

Send your snail mail address, or any questions to
sct_impact@bigfoot.com
and we will send you more information and an application for the IMPACT DISASTER RESPONSE UNIT right away.

Thanks,
IMPACT Board of Directors

>When AMPS was designed, it would have taken a truck full of electronics
>with its own generator to meet your requirements. I hope you're not an
>engineering student. *sigh*

When *was* AMPS designed? Would it not have been relatively easy to include some simple form of scrambling like voice inversion, even at that time? And certainly *something* more sophisticated could have been added to the system by now. Certainly, it would cost something, but plenty of people would be willing to pay for it if it was marketed honestly. Make it clear that the standard phone is easily receivable by the public, while the scrambled phone (which costs more) is not, and let the market decide.

Instead, we have a radio system which pretends to be part of the telephone sytem, including the expectation of privacy that people have come to have from landline phones, yet the over-the-air system is completely in the clear using a very common modulation. And when these security concerns are brought up, the response of the industry is not to acknowledge that the system is easy to listen to, nor to design in some security, but to push for laws making listening illegal.

Now, these don't really seem to be technical issues. I find it extremely hard to believe that *all* of the engineers who designed AMPS were completely unaware of the privacy issues. And I think it completely implausible to believe that privacy could not have been improved by technical means in (say) the last 5 years. But the decision to push legal methods of giving the illusion of privacy rather than just fixing the problem was certainly the decision of the cellular industry.

Dave

I'll agree with the sale prices being a bargain. But did you know
that there are a number of Radio Shack dealers who deal mail order
and give hefty discounts on their wares every day? Pioneer Data(who
I deal with) and US Radio are just two such dealers. Might want to
give them a try next time you are interested in a RS scanner!

Be warned - the radio's tx audio is a little weak. There is a known
problem with the mic placement as well as some of the audio circuits.
The new units shipping have apparently been fixed, but I would strongly
recommend getting on a repeater and asking for an audio quality report
before purchasing. It is a good radio if the audio has been fixed.

MY bct-7 seems to want to ignore "lockout" at times

i got a troublesome freq. that i LOCKOUT and the stupid thing
still comes up during a typical scanning session.
i hit the HOLD button so i can trap it - to lockout BUT
WHEN i hit hold . . . the "lockout" Is already engaged.
the scanner IS ignoring the lockout mode on this freq.

HOW CAN this BE??

thanks ->bh

What you say about the Pro-34 is probably right, but I use the heck out of mine when I'm scanning in the dark, like in the truck at night, or out in my boat. The reason? It is one of very few scanners that has big SCAN and MANUAL buttons side-by-side on the top surface of the scanner. It makes control of the unit really easy "in the blind." I wish more handhelds had this feature rather than the tiny rice-grains you have to find and press on their keyboards.

>tweek@netcom-NO.SPAM-com (Reverend Tweek) wrote:
>
>> I think I was being fair.....
>
>.....said in the context of a critique.

So? You sound like you believe that criticism is wrong. Criticism, IMO, is healthy. Not being tolerant of criticism, IMO, is unhealthy.

>Which gives rise to another subject. Are you subject to
>criticism? Are you as subject to it as you are willing to
>render it?

Not a problem on my end. I am quite open to accepting criticism. Whether I take the advice given or not, is another matter, but I don't flame someone for holding an opinion contrary to mine, although I may flame their opinion.

>Whether you are or are not is not so much the subject as it
>is with people in general. Everyone is so quick to give
>criticism.....but all hell breaks loose when it is given in
>return. You have only to look at our favorite mongrels here
>on this newsgroup to gain an inkling of what I mean.

They're feeding off of you, Bill. The see they've got your goat on the rise, and this gives them joy. Unless they state something patently untrue, fuck them... ignore them. Don't feed them.

>Mackey, ferinstance, does nothing BUT criticize. And look
>at him when it's aimed back at him. He's above it. By the
>gods, Mackey is Mister Joe Cool. So are many others. <gack>

So what. Do you think anyone takes what he says seriously? If I were in your shoes, I wouldn't even bother following up to him. If he per chance gives someone some wrong information, then follow up with the correct information, but don't even bother addressing him in your post, but rather, the original poster seeking the information.

>The irony is that this is a two-way forum. What's good for
>the goose needs to be good for the gander. That's one
>point. But there is another. Why all the focus on critique
>in the first place?

I'm not preventing anyone from keeping the focus off of me. It's already a fair forum. Is it my fault that the focus of critical

opinion is not as much in my direction as you'd like it to be?

>I tried to tell you in a previous post how old it gets to
>try to be of service to the group and have to face a barrage
>of bullshit, picayune, penny-ante, nitpicking, hair-
>splitting, antagonistic criticism for the time and trouble.

I simply stated something like:

"[You must admit, Bill, that it does come across
like a bunch of PR bullshit.]"

You, as it appeared to me, suggested that the earlier post was
somewhat open to interpretation, and that you corrected the broadness
of it in later posts. If I understand you right, you are admitting
that my criticism, while right on target, was not deserved?

>Here, the relevant focus is not me....because I can take it
>and I can dish it out.

Go ahead, dish it out... but it appears to me, that you are taking
it all a bit to personal.

>Don't take this personal, Tweek.....you ARE fair. But don't
>you see, THAT is part of the problem? Fairness, real
>fairness, is a two-way street. And where fairness reigns,
>there is never a question about it, nor even a mention of
>it. The question of fairness arises ONLY when there is a
>damned good reason for it to surface....i.e., when there is
>a lack of it. You really weren't fair by zeroing in on my
>first post to this thread and not taking all of them into
>account before rendering the verdict.

You know, one of the signs that someone is fair, is when
both parties disagree with the judgement. I'm quite
sure that our good friend Mackey would fault the exact same
post you find fault with... possibly the exact same statements,
but from the other side.

I didn't flame you in that post. I made a simple observation, AFTER
telling the poster that he read too much into your post. I explained
what I assumed you meant, and then, and only then, did I make the
observation that it did resemble PR bullshit. I even believe I
followed that with a comment though, that anyone with a reasonable
level of intelligence and who had been following the thread, wouldn't
have a problem determining what you meant. I'm just surprised that
I didn't get bitched at from the other side, for calling him an idiot
for reading you post wrong.

Now, where was the focus of my post? I call the other guy an idiot,
then I mention to you that it did read kind of vague. If you want my
honest opinion, I think I was fairer to you than I was to the other
guy. I didn't call you an idiot.

>poster even bother?

I didn't think I was being unfriendly. A poster flamed you
for what they thought was your claim that you were completely
responsible for solving the problem. I only pointed out to
the poster that your statement (the statement which triggered
his post) could be read in several ways, not all of which are
interpreted as meaning you take full credit. I also made a
little comment to you, that your statement sounded like a lot
of PR-speak, and allowed the reader to infer other meanings
into the statement.

>Geez, Tweek, this antagonistic judge, jury, and executioner
>bullshit gets a little old, you know? Not that I mind, but
>it is a rock and a hard spot situation.

I didn't put you in that situation. I made a simple observation
by stating my opinion. I wasn't trying to stir up shit, but simply
point out that you left your original statement wide open for anyone
who wants to read in any untrue facts. Jury? Judge? Hey, it's called
opinion, and if you can't handle the critical opinions of others, even
if they are placed in brackets insuring that they are not the main
topic of the post, then you probably should ask yourself if you really
belong on the Internet in the first place.

>If I shoot back, oh
>lordy......a cacophony of howls and squeals erupts to thrown
>the newsgroup into pandemonium. If I say nothing, then
>people interpret that as assent, acquiesence, or some other
>ignorant conclusion.

Sometimes, people see a humble person, such as someone saying "You
are right, that post did leave the field wide open for interpretation.
I hope I was able to clarify in later posts", as a quality and not as
a weakness.

Are you really that concerned about what others think of you? Is it
such a bad thing if someone see's you as a "wimp who will bow down to
any asshole who flames him." or a "asshole who won't admit it when he
is in error"? What the hell does it matter to you what others think

of you? Lose the chip. If someone says something that is wrong, slanderous or libelous, correct their error, but if they are just stating an opinion, there's no reason to let your blood pressure shoot up 50 points over worries about how they think of you... Is there?

>Maybe I should just wander off and find me something else to
>do besides post to newsgroups and work to make radio a more
>fun and rewarding pursuit?

Do whatever you want. Do whatever makes you happy. Do you want me to say "No, don't leave the group. We know you are important"? Don't stay up late at night waiting, because I won't tell you either way... if your only purpose for posting here is because others want you, and not because you get satisfaction from being here, then maybe you really shouldn't be here.

>Rocks and hard spots galore here, Tweek.

It's only rocky and hard if that is the portion of the trail you chose to travel. Just off to the side, the route is a bit softer and smooth, and yet it leads to the same destination.

NOW how do you see my post? If that earlier one was antagonistic, then this one must be the nuclear bomb. In my opinion, this post isn't even uncivil. It is my opinion, specifically of your reaction to my post, and how I see that you can tune up your performance in this group. If you don't want to accept my advice, that is fine with me... if you don't want to accept my opinion for what it is though, then IMO, you have more problems that worrying about what others are thinking about you. It's just an opinion, Bill. Everyone has opinions. Accept it for what it is. You can't change an opinion by complaining that the opinion is wrong. You can change an opinion by changing the actions which formed the other person's opinion.

HOW DO YOU FIND THESE SCANNER FREQUENCIES?

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner. The author writes a monthly "Scanner Equipment" column for Monitoring Times magazine, published by Grove Enterprises, but views expressed in this article are his own.]

I am often asked, "How do you find these frequencies?" This article answers the question in various sections:

Books
Magazines
Government Records
Web Sites
Federal Radio Stations
Radio Clubs
Do Your Own Sleuthing
What Makes Station Identification Difficult?
Examine the FCC License on Premise
Examine the Labels on Radio Equipment
Equipment to Determine Frequency Usage
How Can I Determine To Whom I'm Listening? - An Example
Summary
Addresses

Books

The most convenient source of fire and police frequencies is the Police Call Plus, published each year in 9 regional volumes by Hollins Radio Data, and sold at Radio Shack and larger book stores for under $13. Police Call Plus is

basically a computer printout of FCC license information in the fire, police, local government, and conservation services in two lists: by licensee name within state, and by frequency. A few pages of local airport and nonsensitive federal government frequencies are included. Selected business frequencies are listed, too, but without callsigns and other details.

I highly recommend Richard Barnett's 1992 book, Monitor America, published by Scanner Master Corp. A 3rd edition is available from Grove Enterprises for about $30. It is crammed full of police, fire, local government, news media, sports, national park, and commercial broadcast frequencies for all 50 states. The information was compiled mainly from members of the Radio Communications Monitoring Association (RCMA), now defunt. Monitor America contains detailed communications system profiles and precinct maps for major metropolitan areas. Police and fire radio codes and unit identifiers unique to local agencies are listed for several cities. This differs from Police Call Plus, which gives a more sterile, but uniform treatment of licensees, listing even the smallest of towns.

Scanner Master also publishes regional frequency guides for Illinois, Florida, Virginia, Massachusetts, New Jersey, and other states.

Aeronautical frequencies are covered in the Aeronautical Frequency Directory, written by Bob Coburn, W1JJO. Although most of the information is about civilian aviation, Bob included sections on military mid-air refueling and CAP. The 401 page third edition is available from Official Scanner Guides (P.O. Box 525-NS, Londonderry, NH 03053). The same publisher sells the Maritime Frequency Directory and frequency guides for several New England states. Some of these books are available through Radio Shack, too.

The longstanding source of sensitive US government frequencies is still Tom Kneitel's Top Secret Registry of US Government Radio Frequencies. Published by CRB Research, the 8th edition is available from Grove Enterprises for about $22. Kneitel's book contains frequency listings for NASA, military, FBI, Secret Service, DEA, IRS, Border Patrol, arsenals, ammunition plants, missile sites, and others in the 25 to 470 MHz range. Since the US government no longer offers frequency information for its own stations, and has never published sensitive frequencies, most of the information in Kneitel's book has been collected from listeners over the years. It is certainly not complete, nor 100% accurate, but is a good

book for this difficult to obtain information.

Tab Books Master Frequency File, first edition, written by James Tunnell and Robert Kelty, lists federal agencies and frequencies and deserves a read. However, there are no military listings and many pages are devoted to appendices and references which contain no frequency listings. The space would be much better used by a combined federal frequency list sorted by frequency.

Magazines

Although national in circulation, local frequency information is sometimes available in Grove's Monitoring Times and the sensationalistic Popular Communications magazines.

Government Records

Every year, the US Government sells FCC license information, in the form of microfiche, floppy disk, and magnetic tape, to the public through the US Department of Commerce National Technical Information Service (NTIS).

These lists contain license information for the industrial (e.g. Illinois Armored Car, Pinkerton's Security, Joe's Towing, etc.), highway maintenance, commercial broadcast, aviation, common carrier, and maritime services, as well as for police and fire. For more info call NTIS at 703-487-4630.

Back in "the good old days," Grove Enterprises sold copies of some FCC microfiche files, and this was much cheaper than buying directly from NTIS. Grove no longer sells microfiche, but sells information on CDROM for $49 instead. |

The FCC has an agreement with PerCon (tel. 716-386-6015), a private company, to sell FCC license information to the public on both floppy disks and CDROMs. You can buy the full license information for a multi state region or a less detailed license database covering the the entire USA on CDROM for about $100.

The PerCon Spectrum CDROM sells for under $30 and contains a handful of fields for every FCC license in the US. However, Public Safety license information contained in the Winter 1996 Spectrum doesn't appear as up to date as in the 1997 Police Call Plus.

Spectrum works in DOS, Windows, and Mac environments. One can try restricted sample searches of the Spectrum CD for free via PerCon's web page at http://www.perconcorp.com/db_srch.htm .

Companies have appeared which are "plugged into" the FCC licensing system and they sell computer time allowing on-line file access. They also sell paper copies of FCC information. Washington Radio Reports is one example. A monthly publication, it lists license applications made to the FCC. A few members of my scanner club subscribe and share the information with me.

As I have already done for hundreds of radio enthusiasts, companies, government agencies, and organizations across the country, I will locate FCC licensed and selected FAA and CAP transmitter sites in an area of your choice, in any state, and produce a custom RadioMap(TM) report, including a beautiful 8-1/2" by 11" scaled color map, protected by plastic. The map is marked with transmitter sites, cities, highways, airports, military installations, national parks, etc.

The graphical nature of RadioMap allows you to identify antenna sites and visualize the transmitter locations in your neighborhood, near your office, and other places of interest -- from VLF through microwave. The report lists frequencies, callsigns, and licensee names. RadioMap covers police, fire, local government, TV, business, industry, common carrier, railroad, trucking, and many more types of transmitter sites, excluding ham radio stations. Wireline and nonwireline cellular phone and AM/FM broadcast transmitter sites are clearly marked using unique color icons.

Industrial customers use RadioMap reports to survey the "radio environment" prior to installation of radios and wireless microphones at customer sites. RadioMap is used by the maritime and broadcast industries, as well as ham radio operators to solve intermod interference problems, and has been very favorably reviewed in RCMA Scanner Journal, American Scannergram, and USSN.

The RadioMap processes and software are unique and proprietary. Unlike "more tame" maps, RadioMap shows the locations of military bases, ammunition plants, arsenals, weapons factories, and other military installations.

For a flat fee, you choose the center location, and I choose the range, depending on transmitter site density:

suburbs: 5 mile range (100 sq. mi. area)
rural areas: 10 or more miles (400 sq. mi. area)
dense urban area: 1 - 2 mile range

Longer ranges for additional charge - call for pricing.

A custom RadioMap report costs $24.95 plus $5.00 shipping and handling. For an additional $5.00, I will include a

custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area. Send check or money order payable to Bob Parnass for $29.95 for standard or $34.95 for deluxe RadioMap report with histogram. Include your name, address, and telephone number, along with center location (nearest intersection of 2 streets, or latitude & longitude) and mail to: Bob Parnass, 2350 Douglas Road, Oswego, IL 60543. tel. (630)554-3839 6-10 PM central time. For a brochure, send SASE.

Web Sites

If you have access to the World Wide Web, you can visit dozens of sites with local frequency lists.

Federal Radio Stations - Not Licensed by FCC

Since federal government radio stations are not licensed by the FCC, they are not listed in FCC microfiche. In 1981, a group of 60 radio hobbyists split a $1300 fee, and obtained 80 microfiche cards of 'sanitized' information about federal government radio stations under the Freedom of Information Act (FOIA). (See "The Government Giveth, the Government Taketh Away", by Richard Prelinger, in Monitoring Times, July 1982.)

Only 12 of the 21 information fields for each station were furnished. Fields like "Remarks", which indicate the exact usage of a channel (e.g. "Sky Marshall's Net"), and "Bureau", indicating agency subdivision (e.g. TAC within the USAF), were withheld. These 80 pages of microfiche were sold by Grove Enterprises for $25, but are no longer available from that source. Private entrepreneurs have been known to ask $125 or more for a set! In a step backward, the US Government insists it will no longer release this type of information - it is now 'classified'. (See "AFIO and the FOIA", by Bob Grove, in Monitoring Times, September 1982.)

For a reason unknown to this author, the government released a 1984 vintage set of frequencies allocated to the FAA. Perhaps this was a mistake, because the information is marked 'unclassified', but all fields are furnished, including some which indicate security related usage. Grove sold this set of 33 microfiche cards for about $13.

Two way radio equipment formerly used by the armed forces often appears for sale at hamfests. Less often, Secret Service and FBI radios appear there from time to time, too. When you see such equipment, look over the radio for a frequency label and write down the frequencies stamped on

the crystals or channel elements. Make note of any service or property tags which specify the agency or military base which used the equipment.

Radio Clubs

One of the best parts of the hobby is sharing it with other radio buffs. Trading information with other hobbyists about frequencies, communication systems, and receiving equipment is more valuable than a pile of magazines.

Since the early 1960s, I had been an amateur radio operator, and belonged to amateur radio clubs, but I never realized there were any scanner clubs! In 1983, I joined the world's largest scanner club, the Radio Communications Monitoring Association (RCMA), now out of business. There are several regional scanner clubs, spun off from the former RCMA, which hold regular meetings.

Another club which prints sensitive federal frequencies is the All Ohio Scanner Club. I enjoy its bimonthly publication, The American Scannergram, which is about 60 pages long. Although concentrating on Ohio, there is frequency information from other states, and plenty of product reviews and scanning tips.

More information is available on the WWW page http://aosc.rpmdp.com and from:

All Ohio Scanner Club
50 Villa Road
Springfield, OH 45503

Do Your Own Sleuthing

There is a challenge in deriving new spectrum usage information on your own. Sometimes it requires several days of listening, taping, and compiling fragments of information. Other times, the frequency information is there for the taking - without hassle.

You can approach from two directions:

1. Listen first: Monitor a frequency or frequencies, and determine who's transmitting and what purpose the channel serves. Once you identify the user, log the information.

2. Compile first: Take advantage of opportunities, such as examining the frequency label on a guard's radio, or reading the FCC license hanging on the "radio room" wall, to compile frequency lists, then monitor the listed frequencies to confirm that they are really in use. Readers are urged to abide by the

rules of good taste and local laws in the quest for frequency information. Don't trespass, wait for an invitation.

Most listeners use a combination of both approaches.

What Makes Station Identification Difficult?

In most instances, FCC rules require radio users to identify their operations with FCC assigned call letters. Police and fire departments, especially those with trained radio dispatchers, seem particularly conscientious about station identification. Like commercial broadcasters, many of these stations identify on the hour and the half hour.

Some repeater stations have Morse code identification circuits which transmit call letters on a periodic basis, insuring compliance with FCC rules.

On the other hand, over 75% the industrial radio stations monitored within the last year ignore the FCC regulation, making it difficult for a listener to identify a station. Some stations may operate for years using the nondescriptive "base to mobile 2" or "Joe to base" protocol. One rung up the hierarchy are stations that identify using something like "Acme base to 107", giving the listener a clue for his log. If call letters are given, they are often rendered unintelligible by operators who fail to enunciate. The failure to identify is more likely due to sloppiness, rather than any attempt to hide station identity.

While not regulated by the FCC, federal government radio stations vary in the extent to which they identify their transmissions. Some federal stations do not have call letters. A nearby paging transmitter periodically transmits a voice recording announcing, "This is the Army Joliet Ammunition Plant." What more could a listener ask for?

Aside from a scanner and antenna, the most useful piece of equipment for sleuthing is a voice actuated (VOX) cassette tape recorder. You don't need a high fidelity model or anything fancy. I use two modified Radio Shack CTR-75 recorders, a discontinued model.

VOX recorders allow one to compress a whole day's worth of monitoring onto a single tape. I often leave a recorder "armed" and connected to a scanner at home while I am at the office or doing something else. When call letters are mumbled, I can play and replay the tape until I hear and understand them.

If you don't have a VOX recorder, consider a device like the NiteLogger II tape recorder controller, made by Benjamin Michael Industries. It connects simply between scanner and recorder and contains sound activation circuitry to trigger the recorder.

The following examples illustrate techniques I've used to derive new frequency information.

Examine the FCC License on Premise

I have found the actual FCC radio license, complete with frequency assignments, hanging on the walls of places like the Bell Labs security office and the guard shack at Waste Management's Greene Valley Landfill in Naperville.

Examine the Labels on Radio Equipment

Frequency information is engraved on labels on the back of many walkie-talkies, or inside the battery compartment, like in the Motorola HT220 model. Most pagers have labels on the bottom or inside. Like passwords taped onto terminals, it's not uncommon to find Dymo or P-Touch tape labels embossed with frequencies or call letters glued to the front of base stations.

You can make your own opportunities for eyeing the equipment or take advantage of "open house" events. If information is displayed publicly, then a reasonable person could assume it's not government secret.

- At the annual Glenview Naval Air Station open house, I examined a military manpack radio being used by dispensary paramedics. The radio's tuning dial was set at 34.15 MHz.

- The Illinois Army National Guard displayed two armored personnel carriers at the local county fair, each equipped with VHF-FM and HF-SSB transceivers.

In addition to a tuning control (VFO), the VHF-FM radio had a set of channel select pushbuttons, much like those in a car radio. I asked a guardsman a few questions about the radio, and he demonstrated the channel preset feature. A panel above the channel pushbuttons was labeled with the frequencies: 32.055, 34.45, 35.35, 40.55, and 40.60 MHz.

- An Army National Guard UH1 helicopter was displayed at the Marseilles armory "open house". The public was permitted to climb aboard, and observe the instrumentation and radio gear. A channel plate on the instrument cluster listed over a dozen frequencies.

Hobbyists are urged to exercise a modicum of restraint and good judgement. In New Jersey, a radio technician/hobbyist called to service a transmitter in a county building, noticed a new unattended repeater installation in the same room. Being curious about what frequency this repeater was on, he opened the access door to copy the frequencies from the radio's crystals. It turns out that this radio belonged to the US Secret Service, and opening the access door could have activated a "tamper alarm"!

The tech was skating on thin ice. He had nobody's permission to tamper with that equipment.

Another source of frequency information is as close as your nearest Radio Shack store. Some Radio Shack stores make a local frequency list available to assist their scanner customers. Be sure to ask. Stores located in shopping malls almost always know the mall security frequencies. I often check the frequencies programmed into the floor model scanners, too.

Equipment to Determine Frequency Usage

If you don't know the exact frequency, but have a general idea of the range (e.g. 150 - 152 MHz), use your scanner's "search" mode. Most programmable scanners afford the ability to search between two frequency limits set by the user. Some models, including the Radio Shack PRO-2035, ICOM R7000/R7100, Bearcat 2500XLT, and Bearcat 250, have the ability to automatically store active frequencies found during an unattended search operation.

To find the frequency of a hotel communications system, one fellow installed his Bearcat 250 in his car and parked in the hotel lot, leaving the scanner in the "search and store" mode. He left the antenna disconnected so the scanner would only respond to a transmitter in the immediate vicinity.

Test equipment can aid in the quest for new frequency information. I've used a spectrum analyzer connected to an outside antenna, another spectrum analyzer connected to a receiver IF stage, and a frequency counter for close-in work.

How Can I Determine To Whom I'm Listening? - An Example

While scanning the industrial frequencies in the 150 MHz range, a van driver was overheard communicating with "base" while driving around my town. The stations involved never used FCC call signs -- this would have made life a lot easier for me, and legal for them! (one may use FCC license microfiche, described earlier, to identify stations using

call letters.) Transmissions were short and infrequent, so it was decided to tape record all transmissions on this frequency for several days to determine the station's identity.

During daylight hours, a modified Regency K500 scanner was left tuned to the target frequency, connected to a cheap tape recorder through a home built interface. Using a carrier operated relay, the tape interface supplied power to the recorder only during radio transmissions, so a day's worth of traffic could be compressed into a 45 minute tape.

Each day, the tape was played back and notes on names, locations, and activities mentioned during the day's transmissions were taken. The van driver appeared to be making daily stops at a local bank and two shopping malls. A Walgreen's store seemed to be the only stop at one mall. A few times, "base" ordered the van "back to the Training Center." There were frequent references to "guests checking out", "dropping a guest off", and "instructor[s] missing a class". At times, "base" spoke with "security", who must have been using a walkie-talkie as his signals weren't strong enough to hear.

Was this a hotel? Calls to the three local hotels revealed that none provides shuttle bus service to the shopping malls. A call to the Walgreen's, inquiring about bus service to the store, drew another blank. During my shopping trips, I began to pay closer attention to vans with antennas driving through the parking lots.

I was leaving the mall one day, when a week's effort paid off. A maroon and white van, equipped with a VHF-Hi antenna, was dropping shoppers off at Walgreen's. A sign on the van's door read:

XYZ Central Training Center (XYZ is a pseudonym for the actual licensee name.)
Lisle, Illinois

I watched the driver pick up a microphone, and listened to him on my portable scanner checking back with his "base".

All the pieces fit: the "guests", the "classes", the "instructors". Mystery solved; I had been monitoring the customer training center for a large computer manufacturer. The training center has hotel rooms and dining facilities to accommodate students from out of state. As a convenience, shuttle van service is provided to local shopping malls.

Summary

Through books, government records, and radio clubs, scanner listeners can make use of frequency information compiled by others. Two-way radio users often fail to identify their transmissions properly, making it more difficult for listeners to know who they are monitoring. By examining radio equipment labeling, and monitoring and taping transmissions, scanner enthusiasts can unearth new information.

I find that very disturbing.
The FBI breaks into a business and peoples home , and EEB hasn't been informed
of The FBI's target of this investigation??

What Damn country do we live in?
What is on the search warrant if anything?
And if there was any good reason te sieze any equipment from EEB, why couldn't
the county sheriff or local police take care of it?

That's right I could not believe it. I have been using a highly sensitive device that I got from the TV police while visiting London last summer. Its designed to find uhf receivers that are being operated without paying the TV tax. I used this one with my partner Joseph Friday to track down Goldstein and monitor him monitoring the police stings when all of a sudden a super cop appeared out of no where and busted us for illegal monitoring of an illegal monitor, also suspicion of being suspicious. We also got a citation for not being politically correct in that we said emilio is spanish when the cop said he was jewish. The judge dismissed that He said that emilio is not spanish or jewish but he is an alien and since he's using a scanner he's an illegal alien. Happy Halloween

Indeed? Do you have to pass a proficiency test demonstrating speed
at reefing sails to get a master's certificate for a power vessel?

>You need a better antenna. All the good DX is on CW. All of it.

Whether that is true or not, and the DXCC Honor Role would tend to indicate that *some* of the "good DX" is using other methods than Morse, has nothing to do with whether Morse speed testing is a relevant criteria for amateur licensing. Dxing is only one small facet of amateur radio in any event.

The issue isn't about banning use of Morse. The issue is about Morse speed testing for amateur licensing. If you want to work that "good Dx" which is using CW, well then you'll just have to learn CW won't you? No one is trying to stop you from doing that. And if that "good" Dx is using RTTY, you're going to have to learn to do that, aren't you? And if that "good Dx" is using SSTV, you're going to have to learn how to do that too, aren't you? If Dxing is your interest, pursue it however you think best. No one is telling you otherwise. People are only asking that you return the courtsey.

Where you cross the line is when you wish to invoke the power of goverment to force techniques of interest to you on others. At that point you have to prove that the requirement has a demonstrated benefit in reduction of harm to others which outweighs the imposition on the freedom of action of others. I would suggest that you cannot make that case today for Morse speed testing.

[Forwarded from Rich Barnett, Scan Master]

This is one of the most important, and gratifying, e-mails I have ever written:

In Washington today, I attended the House Telecommunications Subcommittee Mark-up on H.R. 2369. Mr. Tauzin of Louisiana introduced an amended bill which replaces the original language almost in total. The amended bill was reported to the House Commerce Committee without further amendments and without objection.

The amended bill only requires that scanner manufacturers eliminate cellular and PCS frequencies! Of course cellular was really not an issue. Broadband PCS frequencies lie near 2 GHz and have never been a concern. Narrowband PCS at 900 MHz will have to be eliminated from scanners, but the manufacturers believe that is do-able. PCS communications use CDMA, TDMA and GSM digital encoding and are essentially unmonitorable.

It will also be unlawful to manufacture equipment which is capable of decoding "protected" digital SMR systems. (More on that in a later post.) Most importantly though, there is no longer a restriction on CMRS (commercial mobile radio service frequencies) as Congress has recognized that there are shared commercial and public safety frequencies.

The dreaded "Intercept OR Divulge" language has been narrowed so that, while it remains in the new bill, it does not apply to any exceptions which are included in the 1986 ECPA (these exceptions include public safety and other transmissions which are readily accessible to the general public).

It will be unlawful to modify a scanner in a manner which makes the monitoring of the aforementioned channels (cellular, PCS, digital SMR) possible.

I will have much more on this tomorrow. For now, while we must remain vigilant (as there is always the very remote chance an amendment will be offered in the Commerce Committee or on the House or Senate Floor), I believe we can all breathe a sigh of relief. And, I think we all deserve a pat on the back. So many of you wrote your Congressman, contacted Rep.

Tauzin.....the message was heard.

Also, public safety, particularly the fire service, really stepped up to the plate. But, most importantly, the industry fought for itself and

for all of us. What is so gratifying about this is that the manufacturers, distributors, ARRL and others, recognize the importance of this business, this hobby, and the customers. That should make us all feel very good.

When you see the full draft of the amended bill in the next couple of days (it will be on the various web sites) you may find some minor provisions slightly troubling. But, when you read these, please remember how the original bill looked. And, remember, that there is a legitimate case that has been made for certain privacy rights. At first brush, I feel this amended bill is eminently reasonable. It will keep the manufacturers in business and will keep scanners available to public safety, hobbyists, and others.

One very good thing has come out of all this. Congress now has a very good understanding that there are important, legitimate uses for scanners. The FCC, which will be responsible, according to the bill, for determining the need for much of the policy in HR2369 (that's right, much has been shunted to the FCC from what was going to be law), must have a clear understanding that Congress wants scanners to be available to the public and that certain digital formats can be a part of the scanner future.

Finally, as I said before, we still must remain vigilant. The bill will most likely not come up for a vote (and perhaps not even come to Commerce) before next year. However, in the meantime, I think we should all back off from the letter/e-mail phone and fax campaigns. If you want to write Rep. Tauzin, please let him know how much you appreciate his willigness to listen to the concerns of the industry and make the necessary change to his bill (as Congresswoman Eshoo remarked herself during the mark-up). Mr. Tauzin could have disregarded our issues. He had bi-partisan support and everyone is for the basic premise of privacy. Yet, he and his staff heard us out and worked with us (quite extensively) to amend his bill.

I am very impressed with his office and with Congress. It's terrific to know that you can make a difference and that Congress is willing to listen and amend legislation when it is appropriate.

Thanks to everyone for all your help and support! We've really done ourselves proud and we've demonstrated that we're part of something very worthwhile.

I will have more on these developments shortly.

> otherwise be possible?

Nope, change that to "than would be possible with SSB or FM". Otherwise,
they would use Morse code for space probes. Would you believe that a
one watt coherent digital signal will beat a 90 watt CW signal using
the same bandwidth? The digital mode gets through when no human being
can even hear the digital mode carrier wave. Perhaps that's why you
missed it. :-)

Just like old CB radios (Uniden 858 & Cybernet Chassis)
and General Motors cars.

> Over the years, there have been several instances of this
> cloning, most with scanners made by GRE-Japan for
> Radio Shack, but there are cases of Uniden clones, too.

I don't know if "cloning" is the right term here. The PCB is
created for a product and almost always with other products
in mind. Most every company involved in mass-production does
this. It's good business.

> The below lists attempt to match up those scanners that
> share very close likenesses. I'm sure the list isn't
> complete and if you have any additions, please forward your

I think you'll find that if you pull out the plug-in 800MHz PCB
in the BC760 it will become a BC590. This is a great little
scanner and would recommend it to anyone.

> If you can add to this list, please let me know.

Done!

This is a petulant, emotional reaction, and an insult to tens of thousands of licensed hams like myself. What the hell is the reasoning here? That learning CW automatically makes one a superior operator, and that the lack of Morse capability automatically throws one into the realm of CB hacks? Jesus, I'm still waiting to hear one sound, reasoned, valid, practical, intelligent reasons for the Morse requirement. Anyone?

I've just been lurking here a few days, and it might be a little early to post, but I've got a question that's driving me nuts.

I bought one of the Radio Shack PRO-64s on sale. I've also been to Scancat's web page, and read of their computer interface for it.

Where does the interface cable plug into the scanner? The only holes I see are the ones for power, headset, antenna, and reset. Am I missing something, or does the computer interface double up with one of these?

TIA

Ken Plotkin

The sky is the limit regarding EEB. Perhaps the employee in question borrowed the EEB customer list and wants to provide it to a third party for a fee! Its no secret that the store is close to one of the well known, former, CIA communications headquarters. EEB could have critical information in their systems regarding persons who shouldn't be identified. I remember years ago when the FBI politely asked a restraunt owner to take all his pictures off the wall cause someone who shouldn't have his picture taken somehow showed up in one of the pictures. The owner removed all his pictures. What else could he do?

>$200.

Oh yeah...and I suppose you'll throw in the ni-cads for another $100 or so, right?

Highway robbery. This scanner only sold for $229 NEW back in 1989-90 during frequent sales. By today's standards, it is painfully slow, technologically inferior (images and birdies galore) and woefully outdated.

I've seen them advertised locally for $50-75.

WiNRADiO is a totally computerized wideband radio that fits
into an ISA slot of a 386 or better PC. It can run under
MS-DOS, but Windows 3.1/95/NT are the preferred platforms.

WiNRADiO covers 500 kHz to 1300 MHz minus the cellular
bands, and has just hordes and hordes of features and
benefits, too numerous to detail here. You can, however,
get all the details from the following Web site:

http://204.210.11.126/bcheek/winradio.htm

or, information can be sent to you by hard copy snail mail
or file attachment to an e-mail, your preference. Just
holler.

Your insistence on holding on to an antiquated system of communication (Morse Code) which the rest of the civilized world has abandoned will go a long ways towards insuring that you do indeed lose more and more bands as your numbers dwindle.

I thought it was neat when I saw a printed Morse alphabet table
someone stuck under the console S-band receiver mat at the Goldstone tracking
station I worked at. Just in case those Apollo moon missions had to
use Morse back-up!

San Bern. County Sheriff's are in the 800 MHz band, there are over 50 frequencies for this dept. San Bern Fire is on 154.190 (Green), 154.025 (Blue), those are the only two that I listened to. I've also heard SBCO Fire on the 800 MHz system when I lived in Rialto. That was about 1 year ago, so, I don't know what's happened since.

If in the Los Angeles Area, listen to 482.9375 MHz.

This makes no sense at all. Morse Code isn't stopping any CB'rs from getting a NO-CODE ham license. In fact, MOST CB'rs who have gotten on the Ham bands, sell their Ham gear and go back to their CBs so they can talk NORMAL like on a telephone, and NOT like typical Hams who have to talk for 2 minutes straight before they let the other people speak. You are also able to remain anonymous without everyone being able to look up your name, age, and address.

The attitude of not wanting "certain types" of people on the Ham bands, or trying to make it harder for new people to become Hams by making them learn an obsolete skill, contradicts the OTHER complaining that there aren't enough Hams using frequencies and bands to keep them.

What would you rather have, more people on the bands that you don't like, or no bands for anyone?

> the trick. Any ideas??

Q32 is the +8v regulator! In the PRO-2004, it's supposed to clamp the output on its emitter to about +8.4v. I suppose as low as +8.2v is okay, though. The collector of Q32 is fed straight from the DC source colloquially called +12v, but which could and should be closer to 14v, typically +13.8v.

The base of Q32 is tightly regulated by D50 to +9v. Regardless of the collector supply voltage, the regulated voltage on the base leaves a certain voltage on the emitter equal to the base voltage minus the emitter-base silicon junction drop of 0.6v. So if the base voltage is 9.0v, then the emitter will be the desired +8.4v.

Your clue, then, is partly that 16 volts on the collector. That's unreal. The collector of Q32 should be the DC feed, either from the internal power supply or direct from the external DC supply.....and never more than +14v. In a word, if your DC feed is +16v, then it may have wiped something out. 16v is a bit too much.

Next, verify the base of Q32. It should be fixed at 9 volts. If not, then D50 has probably failed. D50 is a 9.1v/1-watt zener diode.

This 8-volt supply is crucial in the PRO-2004/5/6 series because the analog receiver section from RF preamp to discriminators and detectors and everything in between all run from the +8v supply. And a few tenths of a volt are critical. I once had a problem in that area in one of my PRO-2004's. I jerked Q32 altogether and replaced it with an LM317T adjustable regulator set to +8.4v. (I don't know why it wasn't designed that way in the first place.)

The current drain on the +8v supply is about 300-mA.

BTW....everything in the PRO-2004 runs from a regulated source with one exception....the audio power amplifier, IC7, which runs off the DC feed. Everything else in the scanner runs from the +8v regulator, or one of the several +5v regulators. IC8 is the primary 5v regulator, but a special CMOS version, IC9, provides +5v to the CPU and SRAM. The PLL also has a couple of +5v regulators of its own.

And there you have the quick course on Q32.

tweek@netcom-NO.SPAM-com (Reverend Tweek) wrote:

> I think I was being fair.....

.....said in the context of a critique.

Which gives rise to another subject. Are you subject to criticism? Are you as subject to it as you are willing to render it?

Whether you are or are not is not so much the subject as it is with people in general. Everyone is so quick to give criticism.....but all hell breaks loose when it is given in return. You have only to look at our favorite mongrels here on this newsgroup to gain an inkling of what I mean.

Mackey, ferinstance, does nothing BUT criticize. And look at him when it's aimed back at him. He's above it. By the gods, Mackey is Mister Joe Cool. So are many others. <gack>

The irony is that this is a two-way forum. What's good for the goose needs to be good for the gander. That's one point. But there is another. Why all the focus on critique in the first place?

I tried to tell you in a previous post how old it gets to try to be of service to the group and have to face a barrage of bullshit, picayune, penny-ante, nitpicking, hair-splitting, antagonistic criticism for the time and trouble.

Here, the relevant focus is not me....because I can take it and I can dish it out. But don't ever wonder why there is a dearth of real experience and expertise on this forum. Don't wonder why many worthwhile people avoid this place like the plague. Why should they contribute and then have to take all the bullshit for their time and trouble?

Answer: they shouldn't and they don't.

So what's the result?

Answer: Mackey and his ilk set the color and tone.

Where is the justice in it? Why does nailing someone to the cross have to be the cardinal focus? Why can't Q&A and topical discussions be in the forefront?

Don't take this personal, Tweek.....you ARE fair. But don't you see, THAT is part of the problem? Fairness, real fairness, is a two-way street. And where fairness reigns, there is never a question about it, nor even a mention of it. The question of fairness arises ONLY when there is a damned good reason for it to surface....i.e., when there is a lack of it. You really weren't fair by zeroing in on my first post to this thread and not taking all of them into account before rendering the verdict.

There would be no reason for fairness to surface if we dealt with Q&A and topical issues. Which gives rise to the notion of moderated forums. Degenerate reprobates like our Mackey don't fare well in moderated environments. A Size #13EE crosswise on their sweet patooties settles matters quite nicely. Mackey will be delighted to give a personal report on that particular subject, too. <horselaugh>

But you get my drift here.......? Or not?

2953. HR2369 bans digital scanners

Newsgroup: rec.radio.scanner
Date: 1997-10-31 00:00:00 UTC
From: jtward01@aol.com
Message-ID: <19971031094701.EAA21154@ladder02.news.aol.com>
Source record: 181658

All,

While most of the changes made in H.R. 2369 are positive they've slipped in a new provision that on the surface appears to ban scanners capable of converting digital transmissions to analog voice audio.

Specifically, the bill now bans scanners "equipped with decoders that -- convert digital domestic cellular radio telecommunications service, personal communications service, or protected specialized mobile radio service transmissions to analog voice audio." The bill then goes on to define protected specialized mobile radio service transmissions as "secured by an electronic method that is not published or disclosed except to authorized users."

Well, we all know how aggressively Motorola has tried to protect what it claims is copyrighted software, firmware and operating systems. It seems possible that Motorola, Ericsson and others could claim protection under this provision since their radio system operating software is licensed to the purchasers of their systems and not available to the public.

I'm not well versed enough on APCO 25 and other compatibility standards to guess what impact they may have on this issue.

I'm also concerned with the verbatim adoption of the exemptions (by reference, H.R. 2369, Section 3, Paragraph 4) included in Chapter 119 of Title 18, USC. While those exemptions include most of what scanner listeners monitor, they don't address certain shortwave and/or satellite communications including foreign press radioteletype, weather facsimile and common two-way radio communications. Under the current wording "intercept AND divulge" it is legal to monitor these communications. Under the proposed wording "intercept OR divulge" it will not be legal.

In their suggested changes to H.R. 2369 the American Radio Relay League attempted to address this issue by substituting the words "private wireless" for the existing words "private land mobile" in the Chapter 119 exemptions. The wording "private wireless" would extend the exemptions to include the types of communications cited above, but whether by design, or through oversight, this change was not included in the revisions to H.R. 2369.

I've already faxed a letter to Tauzin's office outlining these concerns and asking for clarification.

RCHONG@fcc.gov, RCONWAY@fcc.gov,
RHUNDT@fcc.gov, RLAFORGE@fcc.gov, RMSMITH@fcc.gov, SNESS@fcc.gov

Mr. Scholl: Thank you for your e-mail.

The Commission does not have any rule restricting the availability of repair manuals or circuit diagrams for scanning receivers. Further, we have not requested or otherwise suggested to scanner manufacturers that they should withhold such information from the public. We have recently talked with representatives from both Radio Shack and Uniden to make sure that this is clear.

Manufacturers may, of their own choosing, withhold technical information on their products from the public. We understand that Radio Shack and Uniden have decided voluntarily to withhold schematic diagrams and repair manuals for scanning receivers as a way to reduce the possibility that the devices might be modified to receive cellular frequencies.

As you may know, the use of scanners to intercept cellular transmissions has been of great concern to the Congress and the Commission. In 1992, Congress amended the Communications Act to require the Commission to deny equipment authorizations to scanners which are capable of receiving cellular radio transmissions or are capable of readily being altered to receive such transmissions. Witholding repair manuals and circuit diagrams would appear to us to be one method of decreasing the likelihood that scanners could be readily altered to receive cellular frequencies.

Please let me know if I can be of any further assistance.

Hey Idiot,

If this was supposed to be a joke, you forgot to tell us to laugh, because it was pretty stupid, as there is nothing abnormal about presuming an AOL customer (victim) to want to listen to a UHF remote. As for Team Bonehead, none of us are on AOL. I think that speaks pretty well for itself.

Now, can we drop this stupid subject and get back to business????

2960. Improve the Squelch in Your Monitor Receiver

Newsgroup: rec.radio.scanner

last changed June 3, 1996

IMPROVE THE SQUELCH IN YOUR MONITOR RECEIVER

Copyright 1988 - 1996 by Bob Parnass, AJ9S

[NOTE: The first version of this article appeared in the RCMA Newsletter, December 1988. It may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author. It is posted twice monthly on the USENET groups rec.radio.scanner, alt.radio.scanner, sci.electronics.repair, and rec.radio.info. It is also available electronically from the rec.radio.scanner ftp archive on the official USENET FAQ library ftp://rtfm.mit.edu/pub/usenet-by-group/rec.radio.scanner.]

The squelch control in some FM monitor receivers is difficult to use because of too much hysteresis. The American Heritage Dictionary of the English Language defines hysteresis as the:

o "Failure of a property changed by an external agent to return to its original value when the cause of the change is removed."

It's like having play in a car's steering wheel, or backlash in a gear set. Too much hysteresis in a squelch circuit forces one to keep the squelch at a tighter setting, missing weaker signals when scanning or searching. The squelch hysteresis problem was first addressed in a 1984 article about the Radio Shack PRO-24 crystal controlled scanner.

Why do engineers design these circuits with any hysteresis? Basically, hysteresis prevents weak signals from "popping" the squelch open and closed rapidly, which would be very annoying to the listener. A squelch circuit with hysteresis requires a stronger signal to open the squelch than it does to keep it open.

Models cursed with too much hysteresis include the Uniden/Bearcat 800XLT and 760XLT, Radio Shack PRO-2003, PRO-2004, and others. Don't despair, the fix is simple for most radios. I've successfully reduced the squelch hysteresis by replacing a single resistor.

Hysteresis is usually implemented by providing feedback from the squelch gate input to output, through a resistor. The higher the resistor value, the less feedback there is, and less hysteresis. My modification involves replacing the "stock" resistor with a higher value resistor, as identified in the table below.

This technique does not apply to some of the newer Uniden models, because the squelch hysteresis is partially determined by firmware inside the processor IC.

This article cannot provide step-by-step instructions for each radio. I always encourage radio hobbyists to purchase the service manuals for their equipment. The most useful sections of the manual are the schematics and printed circuit diagrams. Good manuals will also describe the theory of operation and alignment procedures, and contain a complete parts list.

If your radio has too much hysteresis, and is not listed in the table, study the service manual. Motorola MC3357, MC3359, and MC3361 integrated circuits, which contain IF and squelch circuitry, are popular in scanners. In these receivers, look for the hysteresis resistor to be connected to these ICs.

Notes

1. The author cannot furnish modification information for other radios.

2. Don't attempt this, or any other internal modification, unless you are skilled in electronic servicing.

3. Make sure your receiver is disconnected from any power source before opening the cabinet.

Table 1. Squelch Hysteresis Resistor In Selected Receivers

Squelch Hysteresis Resistor In Selected Receivers		
Receiver Model No.	Res-istor Value	Stock Comments
Radio Shack PRO-24	R35	33K replace with 220K. Located between pins 12 and 14 of MC3357 (IC1)
Radio Shack PRO-2002	R197	47K try 220K.
Radio Shack PRO-2004	R148	47K remove R148 or replace with 220K.

	On linear board,
	between pins 12 & 14
	of TK10420 (IC2)

Alan, the morse code is NOT used at all for amateur
emergency communications. It is not integrated into
any amateur emergency preparedness (RACES, etc.)
activity. It hasn't been used by amateurs in an emergency in years.

That is the situation today. Emergency comms depend
on voice for the most part because it is the most effective.
All those hypothetical stories of needing CW in any emergency
are pure fantasy as the reality does not bear
out use of code at all in spite of many actual
major storms, earthquakes, fires, etc every year.

About a year ago I remember hearing about some shareware program that
would use a PC's sound card to decode weather satellite images.
If anyone can give me some information, It would be much appreciated.
I have a Grundig YB 305 digital shortwave, which I suspect might not
work with the program.

Also, can anyone tell me what the heck a "trunktracker" is?
I see alot of threads about that.

I see you are still using the same old weak argument. Let me ask you 2
questions.

1) If the code requirement was dropped. Would you up-grade from
Tech-Plus to a higher class license?

2) If so, what would be the reason for the up-grade? I.E. What would you do
with the higher class license?

Just wondering........

some 20 years ago, a passenger was listening to the pilots' talking to the tower during flight. the passengers' radio IF frequency (455kcs) output had overloaded the plane's NDB (low band) receiver, which was being used for nav purposes at that time. the plane had circled right *INTO* a hill...all becuase of that little handheld radio.

this is one of the little known reasons for *not* using a radio on planes.

As of 1100 MST, Nov 1, Radio Shack will still not accept orders for PRO-2006 shop manuals. I talked to several people at the 1-800-THE-SHACK number (which is the one the stores use to order the manuals) and was told that it was restricted proprietary information and that the FCC was involved. I went up through the entire chain of command available at that number and got the same reply at all levels. "NO CHANGE IN POLICY".

Who at Radio Shack told you the policy would be revoked, Bill? Names, please. These people wanted names from me.

Re cellphones, digital and analogue.

In Australia the analouge cellphone system is owned by the government
telephone company, and resold by one private telephone company.
All other cellphone networks use GSM digital with encription.
The analogue system is to be turned of on 1/1/2000. After that we will
have only GSM digital. There are no restrictions on scanners but there
are laws affecting what can be done with information obtained by
listening.

Damn! Damn! Damn! I was assured there would be a public
announcement of the change.....first "this week", and then
"on Friday". I was also assured that they would call me
yesterday to advise of the announcement. I was not called.

So.....here is the best source for information AND the
registering of complaints. I'm sorry that I don't have an
800 number, but since you have to pay for the call, it may
be more seriously treated:

No, I'm not prepared to even *know* how much another agency
would be charging us. I haven't seen any discussion about the
subject coming from AMSAT. Why do you ask? Are you interested
in becoming my financial adviser or are you just being sarcastic?

As for "worse and worse", look to the thread "Arianne 502
Successfully Launched" and read the post from Rob Janssen.

"Delicate" negotiations that have to be kept secret might
not be in the best interest of the AMSAT members.

> protected specialized mobile radio service transmissions as "secured by an
> electronic method that is not published or disclosed except to authorized
> users."

There may not be any need to panic, here. This could be interpreted as meaning "encrypted". The phrasing ("secured by...") is somewhat stronger than the ECPA language about emission modes.

>Well, we all know how aggressively Motorola has tried to protect what it claims
> is copyrighted software, firmware and operating systems. It seems possible
> that Motorola, Ericsson and others could claim protection under this provision
> since their radio system operating software is licensed to the purchasers of
> their systems and not available to the public.

Not a good argument, since the TrunkTracker already exists and Motorola has a relationship with Uniden. Motorola cannot argue that trunking itself is "protected" because they have already licensed Uniden to produce a trunking receiver. The other companies' arguments along the same lines are somewhat weakened by Motorola's actions.

This is not to say that such an attempt at "protection" is not possible, but it doesn't look like it would withstand court scrutiny.

>I'm also concerned with the verbatim adoption of the exemptions (by reference,
> H.R. 2369, Section 3, Paragraph 4) included in Chapter 119 of Title 18, USC.
> While those exemptions include most of what scanner listeners monitor, they
> don't address certain shortwave and/or satellite communications including
> foreign press radioteletype, weather facsimile and common two-way radio

Here is what Section 2511 (2)(g)(ii) says:

"2.(g) It shall not be unlawful under this chapter or chapter 121 of this title for any person -

"(ii) to intercept any radio communication that is transmitted -

"I.by any station for the use of the general public, or that relates to ships, aircraft, vehicles, or persons in distress;

"II.by any governmental, law enforcement, civil defense, private land mobile, or public safety communications system, including police and fire, readily accessible to the general public;

"III.by any station operating on an authorized frequency within the bands allocated to the amateur, citizens band, or general mobile radio services; or

"IV.by any marine or aeronautical communications system;"

How does this not address any of the monitoring targets that you listed?

>In their suggested changes to H.R. 2369 the American Radio Relay League
> attempted to address this issue by substituting the words "private wireless"
> for the existing words "private land mobile" in the Chapter 119 exemptions.
> The wording "private wireless" would extend the exemptions to include the
> types of communications cited above, but whether by design, or through
> oversight, this change was not included in the revisions to H.R. 2369.

There is essentially no difference. Private Land Mobile has a specific legal meaning within the context of FCC regulations, whereas the term "private wireless" does not currently mean anything.

See above comment regarding Icom. BTW, you seem confused as to what a rep is (even though Cheek is not a rep of WinRadio). As you can see, even though your terminology is incorrect I will play it your way.

I am curious William, do you own a scanner? How long have you been into radios/scanners.

That's pretty much the case in Canada too. The annoying thing is
that most radio equipment sold in Canada is identical to that sold in
the U.S., so most receivers available here have these two particular
notches carved out of the 800 MHz coverage, even though there is no
law requiring that here.

One thing is clear - I can not go around randomly interfering with police sting operations any more. I think that's what these past 2 arrests are trying to tell me.
I need to learn to help the stings not hurt them.
I need to learn to think like a SWAT guy.
tonight I visited a sting location that I overheard on my scanner. I "happened" to be wearing a black outfit with a black "hood". I just sort of hung out on the street and in this guy's back yard. I learned a hell of a lot - like I need to have an answer ready when someone asks "What are you doing here". That I think is lesson number one.

Well I've been rethinking the sting operation monitoring. Having been arrested twice, It's been my good fortune to have a few moments to spend thinking about my actions and considering the impact I can have on others. As I continue learning and growing with this, I plan to keep notes, and even publish this info on the internet.

Has anyone else had any experience with this?

"3600" on City of San Diego 800mhz trunked system is referred to as PR-2. It has been used the past week for communications between unmarked detective vehicles, 20/20 the fixed wing Cessna aircraft, and ABLE helicopter for vehicle surveillance's. It has proven to be a very interesting freq. to listen to and has been active mainly during daylight hours. It sounds like they might be following one of their own officers, so it could be an internal affairs freq..

I have a Radio Shack PRO-2039 and yesterday I was scearching for freqs
when it landed on 49.8900 - I soon recognized the sound was from the
sleep machine in my son's room. The scanner fround the freq of the babyh
monitor.

Now here's the problem:

I can do a search and get the baby monitor - but I can't if I try to
enter it manually or program it in. Is this freq "blocked" from direct
access, but not scanning? It makes no sense to me. Can someone email on
this?

Looking for used scanners.

Unit can have any number of channels - hand held or base - older units or new (no crystal units). Must work flawlessly, have original accessories, and be in reasonably good cosmetic condition...original carton and manual would be nice, but not necessary.

Please describe the scanners features, operating condition and appearance in your reply, along with your asking price...

Thanks,

John & Robert
St. Louis, Mo. 63116

P.S. We can also trade ham gear instead of paying cash - if you're interested in a swap, inquire for list of equipment available.

What's wrong? Afraid you might actually learn something modern and useful?
Afraid you might have to "work" a bit to learn it? Or simpluy afraid that
you aren't capable of learning it?

Yea ... it "sets apart" for sure ... it makes us look uniquely backward
and stupid because we refuse keep up with the times and use better things
like everyone else is. That translates to "Those hams are stuck in the
dark ages and refuse to adopt modern technologies that are useful and use
the spectrum more efficiently. Let's take their bands and auction them off
to (fill in some plausible type of commercial service)."

1.) The United States of America

2.) I haven't seen the search warrant. As this is a grand jury probe it is probably sealed.

3.) Whatever crimes are being investigated are apparently federal jurisdiction.

Where can a GRE scanner be purchased except for Radio Shack?
I haven't seen any comments that the RS scanners don't last as long as
others. If you buy their scanners on sale, and get the extended 5
year warrenty, you still get a good value, and it's like paying
$1/month for "insurance" (a 60 month/5year warrenty is $59).

>Toby Cotter
>cottert@coral.indstate,edu

Strictly speaking, the only difference between a "scanner" and my home stereo FM receiver with "Seek" and "Scan" functions is the frequencys that are receivable. Scanners do nothing more than receive radio frequencies. If scanners are outlawed, then the act of receiving radio frequencies is by extension a controlled action. We cannot allow, and should not allow, any government agency to restrict what part of the electromagnetic spectrum we are "allowed" to receive. In my opinion the current prohibition against scanning the 800 Mhz band, where cell-phones operate is in itself criminal. Why should I be restricted from scanning those frequencies? If the concern is the privacy of those using the frequencies, then ENCRYPT the damned signal! The responsibility for the SECURITY of a transmission lies not in the act of creating legislation to prohibit the reception of the transmission, but with the ORIGINATOR of the signal.
WHY should scanners be legal? How's this? While scanning the local police bands, I received information regarding a shooting and gunman at large at a local shopping mall. My wife and children happened to be in the car, heading toward that same shopping mall. I was able to contact my wife via radio, advise her of the situation at the mall, and redirect her to another shopping center for her errand. Because I had a scanner I was able to ensure the safety of my family - and of the officers who were present looking for the gunman. Cops on a manhunt do NOT need a bunch of people hanging around, and I was able to keep at least one carload of people out of their way....

Bill and Tweek, come on guys, bury the hatchets. Give it a rest.

Bill, I've got all the respect in the world for what you've contributed to the scanning hobby. There's not one guy on this newsgroup - myself included - who comes close. But, your first post about the service manual policy change did sound a bit self-congratulatory in the beginning. Anyone who read it all the way through would have seen that you gave the lion's share of the credit to other people. Still, you know you're a lightning rod and the least transgression - real or imagined - is gonna ignite the flames.

Tweek, from the private e-mail we've exchanged I know you're an intelligent guy who can put forth a well-reasoned argument to support his viewpoint. Because of that I can only surmise that many of your posts on the newsgroup are meant to "push people's buttons" and elicit an angry response.

Come on, guys. Grow up a bit and get past this. You've both got a lot to offer the less experienced scanner users on this newsgroup if you'd just stop spending so much time fussing with each other.

John

| RHUNDT@fcc.gov, RLAFORGE@fcc.gov, RMSMITH@fcc.gov, SNESS@fcc.gov
|
|
| Mr. Scholl: Thank you for your e-mail.
|
| The Commission does not have any rule restricting the availability of
| repair manuals or circuit diagrams for scanning receivers. Further, we
| have not requested or otherwise suggested to scanner manufacturers
| that they should withhold such information from the public. We have
| recently talked with representatives from both Radio Shack and Uniden to
| make sure that this is clear.
|
| Manufacturers may, of their own choosing, withhold technical information
| on their products from the public. We understand that Radio Shack and
| Uniden have decided voluntarily to withhold schematic diagrams and
| repair manuals for scanning receivers as a way to reduce the possibility
| that the devices might be modified to receive cellular frequencies.
|
| As you may know, the use of scanners to intercept cellular
| transmissions has been of great concern to the Congress and the
| Commission. In 1992, Congress amended the Communications Act to
| require the Commission to deny equipment authorizations to scanners
| which are capable of receiving cellular radio transmissions or are
| capable of readily being altered to receive such transmissions.
| Witholding repair manuals and circuit diagrams would appear to us to be
| one method of decreasing the likelihood that scanners could be readily
| altered to receive cellular frequencies.

I can think of at least one potentially interesting followup question.
In making its determination whether to deny an equipment authorization
on the grounds that the design is "capable of being readily altered...",
does the FCC take into account the availability (or lack thereof) of
repair manuals and circuit diagrams?

> to play with your goat.

I guess I have some sort of a communications problem. "Got
my goat"? Not like you're inferring, but in a very
different way, yeah.

Concern about what others think of me? Hardly. I should
think the track record speaks louder than drivel.

People play with MY goat? Ha ha ha ha..... (It bites.)

Look....the name of this forum is rec.radio.scanners, right?
How's come we don't talk scanners? Starting with you and
going on down the line to Mongrel Monkey Mackey? (not to
put you and him in the same breath - I paused and took a
deep breath before continuing after the "you...")

That's the point.

As for peeing contests and general havoc and consternation,
I can go with the best of 'em. But the people who really
count seem to want to hear and talk about scanners....if my
e-mail is any indicator.

So I raised issues on top of issues you raised. Two can
play. I tried to address yours. Now you try to address
mine.

Agreed. Except that it's a one-way street around here.

Why? Why can't you just listen to theirs; give yours; and
then go take a leak and grab a sandwich and do some
scanning? Why does this criticism thing have to assume such
prominence?

> >Whether you are or are not is not so much the subject as it

> patently untrue, fuck them... ignore them. Don't feed them.

Do I? There are a handful on my Shit List whose posts I
never see. I try to dialog with a contrary sort once or
twice, and then if there is still a one-way attitude or no
stimulating feedback, then PLOP onto the Shit List they go.
Does that count?

> >Mackey, ferinstance, does nothing BUT criticize. And look
> >at him when it's aimed back at him. He's above it. By the

> >gods, Mackey is Mister Joe Cool. So are many others. <gack>

> So what. Do you think anyone takes what he says seriously?

Yes. <giggle> Others like him anyway.....

> If I were in your shoes, I wouldn't even bother following up to him.

Do you think I do? (Pssssst.....I don't.) :-)

> If he per chance gives someone some wrong information, then follow up
> with the correct information, but don't even bother addressing him in
> your post, but rather, the original poster seeking the information.

I wouldn't know....except for all the threads in his name...

> >The irony is that this is a two-way forum. What's good for

> I'm not preventing anyone from keeping the focus off of me. It's
> already a fair forum. Is it my fault that the focus of critical
> opinion is not as much in my direction as you'd like it to be?

I dunno... you seem to prefer an adversarial dialog than to
talk about scanners and scanning. That's my read anyway.

> Go ahead, dish it out... but it appears to me, that you are taking
> it all a bit to personal.

My only reservation that's hard to swallow is the one-way
aura where by the gods, it's okay to judge, jury, and
convict..... but NOT be judged, juried, and convicted. But
you don't care about that because scanners aren't high on
your list of priorities, I guess. So my reservations are my
problem. I can live with it. But I can also be fair in
wondering where all this off-topic focus is headed and why.

> I didn't flame you in that post.

I didn't say you did.

> I'm just surprised that
> I didn't get bitched at from the other side, for calling him an idiot
> for reading you post wrong.

Maybe he hasn't come back yet..... :-)

> Now, where was the focus of my post? I call the other guy an idiot,

Why? The truth always hurts. Why hurt an idiot?

> then I mention to you that it did read kind of vague. If you want my
> honest opinion, I think I was fairer to you than I was to the other
> guy. I didn't call you an idiot.

I already said you were fair. Did I not? So would it be presumptious of me to inquire if English isn't your native language? (It pissed off Discipio when I asked him that after explaining something to him for the umpteeth time.)

If English is not your native lingo, then I can understand and maybe try to rephrase things in Tagalog, Farsi, Nipponese, Mandarin, or whatever is best for you,if I can.

If English is your native tongue, then I don't understand how come I say something succinct and point blank and it gets overlooked and ignored. Did the magical eraser wipe that statement of mine out before you read it? I think not because you quoted it.

BTW....if you called me an idiot, I'd laugh for a while and then wonder about which branch of the lizard family sprang your gene pool. I mean, look.....I can pee real far.

But I am more interested in scanners and scanning than in peeing contests.....if it's all the same to you.

I gotta get outa here and go to my son's high school football game. Nice shooting the shit with ya.

BTW: I'm a minister, too. For real.

OK, PH3D and AMSAT are great, but is AMSAT even shopping around for
another launch agency? The ESA sucess record is looking worse and worse
and information about what AMSAT is doing is not easy to come by.

Maybe you'd get more donations if ARRL, would stop excluding
people by demanding they learn morse code.... Idiots ! I hope
your satellite blows up on the pad ...

Maybe then all the old men who whine about their latest operation
at the hospital would step aside and let the next generation of
ham operators update the hobby into the 21st century (where morse
code has outlived it's usefulness).

FCC License Data Sources
Bill McFadden
billmc@agora.rdrop.com

Changes preceeded by "|". Please e-mail corrections and additions to me.

INTRODUCTION

This is a list of FCC license data sources available to scanner hobbyists. The FCC master contains a wealth of data about every non-government license in the United States (over three million records). Most of the sources listed contain a subset of this data, although a few contain all or nearly all of it. Government licenses are not administered by the FCC, and the data is not available to the public.

Also available are subscrition services from companies like ISI and CET. Since they charge by the minute, they are not really practical for the hobbyist and hence are not included in this list.

Prices are rounded to the nearest dollar and include shipping, if known.

C.E.T.

CET sells records of all stations inside a 30-mile radius for $80. (Major cities cost extra.) A 70-mile search costs $178. The data is provided on floppy disks and is available in ASCII columnar and comma-delimited formats.

CET does not provide data for licenses that do not contain specific geographic coordinates (i.e., mobile-only systems) or specific operating frequencies (e.g., amateur radio).

To do the search, CET requires the latitude and longitude of the center of the 30-mile radius. I calculated mine from a USGS topographic map I obtained at a local nautical supply store. Alternatively, you can obtain the coordinates for your town from the University of Michigan's geographic name server. Run "telnet 141.212.99.9 3000" and enter your zip code. For my area, the server returned the coordinates of the main post office.

CET can be reached at 800-445-0297.

CSP TECHNOLOGIES

CSP Technologies sells FCC data on CD-ROM. ScannerBase covers the entire US and comes with a database search program.

ScannerBase costs $34. CSP Technologies can be reached at 888-857-4240 (voice) or http://www.csp-tech.com/.

FCC

The database is also available from the FCC for free. It covers most services but not all. Sections can be downloaded, processed with a supplied Visual BASIC program, and viewed with Microsoft Access. The entire database is approximately 3 GB in size. See:

http://www.fcc.gov/oet/info/database/raeddf.html

GROVE

Grove sells FCC data on CD-ROM and floppy. The CD-ROM covers the entire US and is available with or without mapping support. The mapping version brings up a map with the requested station plotted on it. The regular version is $104, and the mapping version is $174.

Floppies are available by state for $44 per state (add $10 for CA, FL, TX). The disk comes with a database search program. Grove Enterprises can be reached at 800-438-8155 (voice) or http://www.grove.net/.

MICROFICHE

The Bearcat Radio Club sells the FCC master by state for $15. Bearcat Radio Club can be reached at P.O. Box 291918, Kettering OH, 45429.

PERCON

PerCon sells FCC data on CD-ROM. The Spectrum CD covers the entire US and comes with a simple database search program. Regional CDs cover subsets of the US but come with a more powerful database manager and provide more detail about each license. Also available is a Ham callsign and repeater database CD.

Spectrum costs $37, and the Ham and Repeater Database is $22. Regional CDs are $137 for the first CD, $102 each additional CD ($560 for the entire 6 CD set). Data is updated twice a year. PerCon can be reached at 716-386-6015 (voice), 716-386-6013 (fax), support@perconcorp.com, or http://www.perconcorp.com. The Spectrum database can be searched free of charge via Percon's WWW page.

POLICE CALL

This is probably the most cost-effective source of public service license information. The detail is limited, but the information that is there is often more useful than the FCC master. For example, an entry in Police Call that reads, "Portland Police, Net 3, North Precinct," reads, "Portland, City of" in the master. Police Call has been merged with its sister publication, Beyond Police Call, and now includes a limited

selection of business listings.

Police call is available in 9 volumes covering different regions of the US. It can be purchased at Radio Shack stores for $13 per volume.

| PRO DATA

| Pro Data is a database manager program for license data. It does not come
| with its own data but can import data from APF, Percon, ScanWare, and
| UFDBF database files.

| Pro Data costs $60. For more information, write to prodata1@gte.net, or
| visit http://home1.gte.net/prodata1/index.htm.

RADIOMAP SERVICE

Developed by long-time Usenet contributor Bob Parnass, this service provides a custom report of frequencies, callsigns, and licensee names for a specified area in any of the 50 states. Coverage areas of 4 to 256 square miles will be chosen by Bob depending on transmitter site density. Standard and deluxe reports are available. Both reports include a color plot with transmitter sites marked. The deluxe report adds a custom frequency allocation histogram, a 0 - 1,000 MHz "spectrum analyzer-like" display showing spectrum usage by the transmitters in the map coverage area.

To create the report, Bob requires the latitude and longitude (or nearest street intersection) of the center location. Standard reports are $29.95, and deluxe reports are $34.95. Write to Bob Parnass at 2350 Douglas Rd, Oswego, IL, 60543, or call him at 630-554-3839 between 6-10 PM central time.

SCANWARE ASSOCIATES

ScanWare Associates has developed a PC-based database program called the FCC Frequency Retrieval System. FCC data for all states is available, covering all services and all frequencies. Current data is for first quarter, 1996.

Scanware has chosen to discontinue developing this software, but the good news is that the software and data are now FREE! It is being hosted by the West Virginia Educational Network. See:
http://www.wvsc.wvnet.edu/~fcc/index.html

APPENDIX

> GE-88D-7738; for a PRO-2006, cat# 20-145. Cost is
> uncertain, but expect a good $12-$15.

It's stock nbr LB0040, and expect a _bad_ $29.69. In '94 it cost
$11.50 and a year later it was $12.06. While Natl Parts still has the
best and most knowledgeable service in Tandy (damning with faint praise),
the price increases over the last year have become unconscionable.
Given the current inflated price, you might still want to buy two.
There's no telling what the price will be (or even if it will be available)
three years from now when it again needs replacement.

Note that when you remove the front panel, you're disconnecting the
memory backup battery. Write down all your channel assignments, as you'll
be punching them back in when you're through.

Actually, the switch closes whenever the scanner is stopped
on a channel, even if there is no signal present. (Such a
condition could occur in the "manual" mode, or in the "scan"
mode during the rescan delay period.) It only opens when
the 2006 is actively searching or scanning.

> >poster even bother?

> I didn't think I was being unfriendly.

Once again the question of "native language" arises. Did I
say or even infer that you were being unfriendly? Why the
smoke screen? I referred to myself. Not you. Read it
again, Sam. 'er, Tweek.

> A poster flamed you for what they thought was your claim
> that you were completely responsible for solving the problem.

And I wrote that flaming adam henry off like a popped zit.
He didn't figure.

> I only pointed out to the poster that your statement (the
> statement which triggered his post) could be read in several
> ways, not all of which are interpreted as meaning you take
> full credit. I also made a little comment to you, that your
> statement sounded like a lot> of PR-speak, and allowed the
> reader to infer other meanings into the statement.

But what does any of that have to do with scanners and
scanning? And what post from anyone can't be interpreted in
any number of ways? I am a master at the composition of
thoughts and ideas into the written medium. If what I write
can be so misinterpreted, then what about anything else
anyone else posts? Why does interpretation have to get the
focus? Why not scanners and scanning?

Geezus man, a body can't post the simplest thought or idea
or factual tidbit without a herd of adam-henries lining up
to take a potshot at the poster. And you thing any of those
AH's have anything constructive to post? Oh hell no!
>
> >Geez, Tweek, this antagonistic judge, jury, and executioner
> >bullshit gets a little old, you know? Not that I mind, but
> >it is a rock and a hard spot situation.
>

> I didn't put you in that situation. I made a simple observation
> by stating my opinion.

You are aware, aren't you, of the distinct correlation of
opinions to rectums? (Everybody has one and they all
stink.) Why does everything posted have to be imbued with
the stink of a hundred opinions? Or rectums, whichever the
case may be?

> I wasn't trying to stir up shit, but simply
> point out that you left your original statement wide open for anyone
> who wants to read in any untrue facts. Jury? Judge? Hey, it's called
> opinion, and if you can't handle the critical opinions of others, even
> if they are placed in brackets insuring that they are not the main
> topic of the post, then you probably should ask yourself if you really
> belong on the Internet in the first place.

I think the salient point here is, again, the one-way
attitude about this. You "simply" do this or that. When I
"simply" do that or this, ohhhhh gawwwwd, you're wounded! I
trampled your rights. I bored into the core of your
wretched soul and condemned it to the eternal fires of
Hades. Really, Tweek......!!!

> Sometimes, people see a humble person, such as someone saying "You
> are right, that post did leave the field wide open for interpretation.
> I hope I was able to clarify in later posts", as a quality and not as
> a weakness.

Yeah, how's come those who "see" or look for such values in
others don't adopt 'em for themselves and set the example?
Ohhhhhhhh we are so quick to fillet some poor bastard who
dares a topical post. And again, I ask you just what post
isn't wide open for interpretation with possible exception
of one-word posts including: "yes" and "no"? C'mon, Tweek,
whup the good words from the good book upon me, what say?.

> Are you really that concerned about what others think of you?

No. I am more concerned about why the newsgroup can't flow
in a constructive direction; why posters can't get help with
their problems and questions; why those who can help have to
be singled out for surgery. I tried to tell you that.

> Is it such a bad thing if someone see's you as a "wimp who
> will bow down to any asshole who flames him." or a "asshole
> who won't admit it when he is in error"?

All that shit is subjective....like in the eye of the
beholder. It is more of an objective thing when people,
especially newbies, try to participate and get a dose of
intimidation and vinegar for their time and trouble. But
it's worse for those who can contribute more than just

questions and pleas for information.

> What the hell does it matter to you what others think
> of you? Lose the chip. If someone says something that
> is wrong, slanderous or libelous, correct their error,

Oh gawd..... you gotta be shittin me? You ever "correct"
someone and have it taken with a "Thank you sir for your
kind efforts to correct the error of my ways."?

> but if they are just stating an
> opinion, there's no reason to let your blood pressure shoot up 50 points
> over worries about how they think of you... Is there?

Nope. And is there any reason for their blood pressure to
shoot up 50 points when you gently remind them of the
correlation of opinions to rectums? Is there?

> >Maybe I should just wander off and find me something else to
> >do besides post to newsgroups and work to make radio a more
> >fun and rewarding pursuit?
>
> Do whatever you want. Do whatever makes you happy. Do you want
> me to say "No, don't leave the group. We know you are important"?
> Don't stay up late at night waiting, because I won't tell you either
> way... if your only purpose for posting here is because others want
> you, and not because you get satisfaction from being here, then maybe
> you really shouldn't be here.

You missed the point, though I didn't really spell it out.
I won't task you with the question of "native language" but
you sure weren't as intuitive as I'd hoped. My fault for
beating around the bush on that one. The point is that this
newsgroup doesn't attract quality people. Some come. And
then go. Not many stay. And the few who do end up being
one-way. They just post.....and don't discuss a thing
interactively. It's their defense mechanism, I guess. I
can see it that way because I tried it myself. It works.
Just plop down an occasional post and don't read anything.
Been there. Done that.

Only it kind of hurts a little to come back a couple of
weeks later and see a couple of constructive replies and/or
someone ask a question highly deserving of an answer. The
hurt comes upon the realization that the poor fellow
probably got tired of waiting after a week and moseyed off
figuring he nust've had bad breath or smelly armpits to be
ignored so. In other words, it's kind of sick that the
mongrel monkies stink up the scene so bad that the quality
people either lose interest or go into one-way mode.

I was trying to tell you in first-person about that
characteristic. I suppose third-person is better.

> NOW how do you see my post? If that earlier one was antagonistic,
> then this one must be the nuclear bomb.

No. I just see you evading the point or somehow trying not
to come to the focus. Apparently, you don't want to address
the issues in terms of specifics, sum, and substance

> In my opinion, this post isn't even uncivil.

No. It's civil enough. Just not on topic is all.

> It's just an opinion, Bill. Everyone has opinions.

Well, maybe. I try to minimize mine. There are things that
I know and the rest I don't know, expect when push cones to
shove and I have to shit or get off the pot, then I might
concoct an opinion to get by until things get sorted out.

Like if you asked me if I thought there was intelligent life
elsewhere in the Universe. I'd say, "Hell, Tweek, I dunno."

People ask me for my opinion on certain radios. Okay, I
guess it's an "opinion" but I try to stick to what I know
and/or what I feel from some aspect of substance. It's
still an opinion, but differs from the kind of opinion that
would say your lineage comes down from the lizard family.
There are opinions.....and then there are opinions.

> Accept it for what it is. You can't change an opinion
> by complaining that the opinion is wrong. You can change an opinion
> by changing the actions which formed the other person's opinion.

Yeah.....change the way the synapses fire in the other guy's
skull cavity. Starting with brain surgery and mind-altering
hallucinogens.......those would work. :-)

>misdemeanor ticket in hand (or go to jail).

Did Florida ever think of the volunteer firefighters?
A scanner is the only means (for many of them) to hear their fire
calls being dispatch, for them to respond to the station.
Volunteer firefighters having scanners in their cars, while in
Florida...need to made an exception to this law also.....(my opinion
only).

Regardless of Florida's
>decision. If one feels the state is going against federal law, so be
>it, be prepared for a COSTLY battle.

As long as scanners are not being used in a crime, or evading law
enforcement, states have no right to enforce this law.

Receiving frequencies on a scanner is federal, not state enforced.

These simplistic responses are bad news, guys, especially the stuff that implies that if you have a ham license you're exempt from scanner restrictions. That is only true in SOME states and jurisdictions. It is not true, for example, in New York; our law (VTL 379) only guarantees hams the right to possess gear capable of being used on frequencies EXCLUSIVELY dedicated to amateur use. This is complicated stuff, and if you are genuinely concerned that you may be violating the law and exposing yourself to liability, do yourself a favor and discuss the matter with an attorney for SPECIFIC advice relative to your SPECIFIC situation.

Perhaps Dan will check the thread to determine that Bill Cheek, initially
in anonimity, decided to flame anybody who took issue with any potential
shortcomings of the WiNRADiO product he represents.

I cannot see why anybody would buy a product from a company like WiNRADiO
which employs an arrogant and short-tempered person like Bill Cheek.
Especially as reputable, long-standing companies like ICOM make a similar
PC-based radio.

I'm selling a Uniden BC895XLT trunktracker that is a couple months old for a friend. He is selling it to fund the purchase of another radio (Icom IC-PCR1000). It is in "as new" condition with original box, packing, manuals and accessories. The price is $245 prepaid via money order or certified check. I will pay for the shipping.....

Ken:

I'm not sure on the Radio Shack, but the ICOM IC-R10 hand held, couples to a computer through the same jack as the earphone uses. It is the same type mini jack that stereo headphones use. So they only need three wires to talk to your radio use a serial interface from your computers. Give Scancat a call to confirm this.

Bill Crocker

p.s. How do you like the PRO-64?

There are several countries that allow you to operate HFs without any
codes.

Japan

No code : Under 10 MHz + Above 20 MHz (10W), Above 30 MHz (20W)
5 wpm : Under 10 MHz + Above 20 MHz (50W)
9 wpm : Full access 200W
12 wpm : Full access 1000W

Fiji

No code : Full access 150 W

# of hams in Japan are increasing(and 50% of hams stay there...)

many seek for "world wide communication" and it is possible to get it
in Japan quite easily...

don't say no-CW HFers will not be polite. most of HF users in Japan
are no coders and I am getting good responses about how JA stations
are operating.

Uhm, the algorithms for FIR digital filters are so simple that I could take a 12 year old with basic programming skills and teach them how to implement a FIR filter in DSP code in an afternoon. I could not teach that same child the More code and establish any proficiency in that same afternoon. IIR filters are only slightly more complicated to implement.

Tradition is the last ditch excuse for maintaining the status quo when
all logical reasons have ceased to exist.

> How about the fact that compared to voice CW makes
> international communications between hams who cannot speak eachother's
> language much more meaningful?

The amount of content that can be exchanged between operators who share
no common natural language is VERY limited. Morse has NO advantage over
more efficient digital modes in this respect ... one can type all of the
Q-signals, SOS, etc. just as well as by beeping, and modern digital modes
are more robust, so the message is more likely to get through.

> Remember that bit about International Goodwill and all?

Yes, I am firmly convinced that a bunch of "Ugly Americans" screaming "CQ Contest" and stomping all over anybody and everybody or using typical brute-force "pileup-busting" techniques in quest of a new DX contact does WONDERS for international goodwill ... (this entire paragraph is sarcasm)

> You can across the bands and hear someone calling for help in Portuguese
> or Swahili... will you know what is going on? Now, you come across
> SOS... do you have more of a clue as to what is happening? I think if
> you are intellectually honest and can admit the truth to yourself you
> will see my point.

If you are intellectually honest and can admit the truth to yourself you will see that you still don't know how to figure out most of what the hell is going on, due to the very limited amounts of information that can be conveyed by Q-signals and the like.

You still don't know shit about what "unga munga boola dawade" means in Swahili, do you? Is it "Need blankets, kids freezing at night." or "We have diphtheria outbreak, send vaccine." or is it "Yankee go home, we don't want your obnoxious ass here." ???

(for any readers who actually speak Swahili, I meant no offense by making up the
"unga munga boola dawade" phrase, I was just trying to make the point that Morse is not, despite popular mythology, analogous to the "universal translator"
of Star Trek fame ...)

> Is CW the most efficient mode to ever be developed? No. Should we
> limit ham band usage to ONLY the MOST efficient mode devised? Of course
> not!

Agreed, but we should also not limit access to the bands on the basis or proficiency in, or worship of, any single mode ... especially one that dates to 1847.

> And if we just do digital in amateur radio then from the user point of
> view it is no different than the internet... just slower... what use is
> that?

It doesn't HAVE to be slower ... and the content can be far beyond what is currently available via packet. That amateur packet is still limping along (predominantly) at 1200 bps using the kludge of "TNCs and AFSK over voice-grade FM radios speaks VERY BADLY for the ham community as a whole for being lazy, backward, and refusing to keep up with the times.

> Do we want hams, or appliance users? Just curious.

I think we want hams (who are more interested in radio, experimenting, and learning). Unfortunately, what we HAVE are predominantly appliance-operating gamers who have few clues about the internal workings of their appliances.

Thanks for the info! I'm taking your advice in replacing Q32 with a LM317T. That sounds like a much better alternative.

My 2004's power supply wants to output around 16v, which is probably why my second Q32 failed from the start. Do you have any ideas on what to look for in bringing the voltage back down to 13.8?

BTW, I bought all 3 of your books from Grove last week and they are, without a doubt, excellent.

Take care,
Steve Phipps

My Amateur Radio Station

My amateur radio station is located in the university residence, the complex where all residences are the students...

Some students ask me about my station, "hey, it's cool. may I see it ?"

I say, "sure."

they say, "oh cool !! so you can transmit music ?? I wanna hear something in my room !!"

I say, "no, you can't....."

they get disappointed.

they say, "so you can contact anyone anywhere in the world ?"

I say, "no I can't. you have to know morse code to use shortwaves."

they get disappointed.

---

now... how would you suggest the people to involve in the amateur radio ??

Precisely the opposite - in flight, a cell phone would have line-of-sight
to dozens, if not hundreds, of cells. That's one of the reasons that the
FCC/FAA don't permit them to operate in flight - it totally defeats the
purpose of having limited-coverage cells and frequency reuse.

Source record: 181379

Hello all,
Just the other day while monitoring the San Bernardino County, CA
trunked system from my QTH here in Twentynine Palms I happened to hear
a deputy requesting the cypherlock code for the door on the Morongo
Basin Sheriff's Station (seems he forgot it).
Perhaps thinking he was being slick, sneeky, or whatever you wish
to call it, another deputy replied that is was one number higher than
the penal code for "X" (deleated for obvious reasons).

Hmmmmm . . . .

Let me see, all laws are public information so with a little
research I had the cypherlock code.
Here I sit with full access to the station after hearing this.
Will I use it? Not a chance! Will I give it out to anyone? Not a
chance!
With 18 years and counting in the USMC I am fully aware of
security. Perhaps they need to go over it again with the deputies?
It is truely amazing what you hear over an unsecure system.
My point? Be aware of what you say at all times no matter how
secure you think the link is.

Best Reguards To All,
Jerry

Grove sells a splitter that lets you use both. Its not as good as an actual "scanner" antenna, but it does work quite well. I put one on my new Lumina. Another advantage is that it doesn't let everyone know you have a scanner in your car. Its $17 + s/h. You can find it at - -
-http://catmac.grove.net/CGI.SPG?L=F&P=CPL+63B

Good scanning

> Toby Cotter
> cottert@coral.indstate,edu
> Perhaps the question that should be asked is why they should be _illegal_.
One of the reasons the United States Constitution was such a break with
the past is that, rather than specifying what things shall be allowed,
it specifies what things shall _not_ be allowed. All other things are
allowed. Therefore, the burden is not for you to demonstrate why
scanners should be legal, but for your adversary to demonstrate why they
should be illegal.

Since listening to a scanner harms no one, there is no reason to make
it illegal. That alone is reason enough for them to be legal.

Joseph

Hello all!

I have a STX-821E for sale. It is the enhanced model, and is known as one of Motorola's Best trunked handheld radios. It features the following:

- 96 Trunked Systems and Conventional personalities (16 talkgroups per system)
- GPS 1.1 Firmware
- Full Keypad and Display
- MDC ID
- Supports Type I, Type II, and Type IIi trunking
- Talkgroup/Subfleet Scan
- Phone Interconnect, ID page, etc

Comes with a good battery and antenna.

Asking $675.00 Shipped Fed EX COD to your door.
Thanks!
-Lb

Beats me... Did you look under the batteries? That's where I found a "secret switch" on a PRO-41. And is this a good scanner? I've reserved one at RS, but am hesitating because a 200 Ch is $109.

I'll give you $75 and not a penny more... That scanner is illegal, and anyone who gets their hot little paws on it would be more than happy to turn you in.

Tell you what. I'll take a 12 year old kid with no CW skills, and you
take a 12 year old kid with no programming skills, and let's see how much
CW I can teach in one day versus the amount of DSP code you can teach.

Sorry Doc, thats not exactly how it works, First someone must decide
that there is a conflict between state and fed. law and then appeals and
counter suits chase the issue maybe all the way to the U.S. Supreme
court. In the meantime, the poor sot convicted of a state law (that may
be overturned someday) still ponders his state conviction. Thats if the
high courts feel the conflict even deserves attention, they may feel
that the conflict doesn't merit the court's attention.
Hope this helps!
Reguards
Al

3072. Re: AR1500 Problem!!

Newsgroup: rec.radio.scanner
Date: 1997-11-02 00:00:00 UTC
From: AOR UK LTD <info@aor.co.uk>
Message-ID: <8YiV7DAweQX0EwX+@aor.co.uk>
Source record: 181390

AR1500 reset info is as follows:

Regards, Richard - AOR UK LTD

--

AR1500 Microprocessor reset

The information stored in the memory channels (scan banks) and search bank is permanently held in a `chip component' called an EEPROM (Electrically Erasable Programmable Read Only Memory). No battery backup is required.

In the extremely unlikely event you should encounter problems with memory loss or corruption it may be possible for you to RESET the microprocessor. This scenario may occur due to static discharge from mobile operation, connection to an external aerial, shipping in plastic & polystyrene materials or from noise on the power feed to the receiver.

A small RESET slide switch is located in the battery compartment of most (BUT NOT ALL) AR1500 receivers. This switch is covered by a protective tape and is connect to a short length of wire. If you cannot locate the switch and are not comfortable with `lots of button pressing' please contact your dealer.

If a reset switch is not present, you will require further technical information!

1. Switch the AR1500 Off and remove the battery cover and NiCad pack.
2. Remove the protective tape from the slide switch.
3. The switch has two positions, carefully slide the switch from the first to the second position.
4. Insert the NiCad pack and switch on the receiver.
5. The display should be blank at this time.
6. Carry out the following key strokes very carefully, take your time. If you make a mistake switch the receiver Off/On and start again. If the first sequence of [BANK] [PROG] has no effect repeat these key presses as required. The key strokes should appear on the LCD as you progress.
7. Execute exactly as shown! (ignore the " - "separator):

AR1500 & AR1500E
BANK - 1 - PROG - 0.5 - LIMIT - 1.995 - SEARCH - 556.325 - ENTER
2 - PROG - 2 - LIMIT - 299.995 - SEARCH - 556.325 - ENTER
3 - PROG - 300 - LIMIT - 419.995 - SEARCH - 249.125 - ENTER
4 - PROG - 420 - LIMIT - 606.995 - SEARCH - 249.125 - ENTER
5 - PROG - 607 - LIMIT - 797.995 - SEARCH - 58.075 - ENTER
6 - PROG - 798 - LIMIT - 1105995 - [DOWN KEY] - 249.125 - ENTER

7 - PROG - 1106 - LIMIT - 1300 - [DOWN KEY] - 556.325 - ENTER

AR1500EX (it's slightly shorter)
BANK - 1 - PROG - 0.5 - LIMIT - 95.995 - SEARCH - 556.325 - ENTER
2 - PROG - 96 - LIMIT - 299.995 - SEARCH - 556.325 - ENTER
3 - PROG - 300 - LIMIT - 512.995 - SEARCH - 249.125 - ENTER
4 - PROG - 513 - LIMIT - 797.995 - SEARCH - 58.075 - ENTER
5 - PROG - 798 - LIMIT - 1105995 - [DOWN KEY] - 249.125 - ENTER
6 - PROG - 1106 - LIMIT - 1300 - [DOWN KEY] - 556.325 - ENTER

8. Switch Off the receiver and remove the NiCad pack.
9. Carefully slide the switch into it's original position and replace
the protective tape.
10. Insert the NiCad pack once again and switch On.
11. Test the receiver fully.

Notes:
This procedure resets the microprocessor and clears the contents from the
memory channels - they will now be blank! The search banks may differ from
the defaults shown in this manual, in this case you will need to reprogramme
them.

You have instructed the operating system of the AR1500 to receive selected
bands with selected Intermediate Frequencies (IF), if your keystrokes
faithfully followed the above then you will have an unbroken coverage from
500 kHz to 1300 MHz without gaps. If you receiver a <Fr.Err> message, you
have probably made a mistake - try again.

Note: To ensure the best microprocessor stability never delete ALL memory
channels from a scan bank, it is a good idea to leave at least one active
channel in each bank... i.e. 000, 100, 200 etc. Do not limit the scan range
to a memory bank which is totally empty.

The answer is right there in the stuff I snipped, none of which had one thing to do with scanners or scanning. If you wish to talk about scanners, talk about scanners. If you wish to start and pursue flame wars, then by all means continue to act as you have in the past. Pretty simple concept, isn't it?

If you need an example, I'll repeat one I gave in an earlier post:
Bob Parnass.

Dave, the following paragraph, which I did not quote, deals with encryption.
That is NOT what is being talked about here.

>Not a good argument, since the TrunkTracker already exists and
>Motorola has a relationship with Uniden. Motorola cannot argue that
>trunking itself is "protected" because they have already licensed
>Uniden to produce a trunking receiver.

Not talking about trunking. I'm referring to the digital coding scheme used in
the Motorola ASTRO and Ericsson EDACS systems.

>How does this not address any of the monitoring targets that you
>listed?

Press RTTY, for example, is not government, is private point to point, and not
land mobile. Accoding to Julius Knapp, chief of the FCC policies and plans
division in the office of engineering and technology this would not be covered
under the private land mobile definition. The FCC would, he said, consider
such systems covered under the wording private wireless and an appropriate
legal definition would be assigned.

Richard Green <*srcemag@gate.net*> wrote:

>WHERE is it and where can I get info and does it work
>at following GE systems?

I published this in a 9/97 Monitoring Times G/Wiz review:

"...Scanning Ericsson EDACS trunked systems is more challenging.
When a station stops transmitting on an EDACS system, the repeater
carrier remains on the air and 3 annoying scanner-jamming beeps
are transmitted. While your scanner is stuck listening to the beeps,
the conversation has moved to another channel. Some hobbyists
have equipped their scanners with a G/Wiz board as a countermeasure."

"Simply put, the G/Wiz circuit instructs your scanner to start
scanning again as soon as it hears the first beep tone.
A G/Wiz-equipped scanner will not distinguish between talk
groups like a Trunktracker, but it will scan right past the beeps
to find conversations. The G/Wiz is touted as being able to skip
over mobile data terminal transmissions as well,
though we couldn't verify this."

"It is not designed to handle channels transmitting encrypted
voice or continuous control data, so control channels should
be locked out of your scan list for best performance."

"Broadcast engineer Terence Brennan originally developed the
G/Wiz to help news gatherers at his broadcast station monitor
the local sheriff's EDACS system. The G/Wiz became popular with
local scanner hobbyists and is now available through
Scannermaster (tel. 800-722-6701) and The Ham Station (800-729-4373)."

"G/Wiz can be installed in most Radio Shack and Uniden scanners,
including base and portable models. There are two versions of
G/Wiz. Each version is optimized to work in different model
scanners, so it's important to specify the make and model
of scanner when ordering...."

3085. AR1500 Problem!!

Newsgroup: rec.radio.scanner
Date: 1997-11-02 00:00:00 UTC
From: mwojcik@ripco.com
Message-ID: <63h25b$81c$1@gail.ripco.com>
Source record: 181422

I recently bought a used AR-1500... The previous owner had his frequencies programmed in and they were from a different area.. The review from Design EQ mentioned a reset switch... I looked in the battery compartment and there was a miniature switch taped up.. The manual didn't mention anything about this.. I flipped it... (and tried flipping it back) and now when I turn on the scanner, any frequency I enter gives me a "fr error"... it slows down, and the keypad stops working... Was this a reset switch? Is there something I have to enter on the keypad? Did I seriously screw something up by flipping that switch? Right now my scanner is useless.. What can I do?

Thanks,
Mike

3086. Does RS have parts or repair scanners, Pro-51 Broke!

Try doing a search and store the baby monitor freq in a monitor channel on your scanner. Then, pick an empty channel, hit program, then recall that monitor channel. You should be able to store it into the new channel.
Check your owners manual to see what steps the scanner will accept for that range of frequencies (eg. 5 khz). You may have a problem in the scanner.

Your local Radio Shack should be able to send it in for repair at a service center. Or, if you can get it now, you could order a service manual and fix it yourself.

If your planning on USING CW, then fine. But why should people who want to use VOICE on the HF bands (it is allowed, you know) have to learn CW?! Does this make sense to you?!

It takes time, determination, and real comittment to be a brain surgeon too... so lets make EVERYONE learn how to become a brain surgeon, and call all those who don't become one, LAZY!!!

Note: EXISTING brain surgeons would not see a problem with this, but those who are not, would. Think about WHY that would be, before you continue your argument.

By this logic, all people who speak english but do not speak russian or japanese, are LAZY. I prefer to not think of them as LAZY, but EFFICIENT for not wasting time and energy on a language they are not going to use! If someone wants to learn another language because they may want to visit another country, then it would be useful to learn. But it would be silly to FORCE english speaking people to learn russian, so that they could take a trip to California.

So why raid and shut down a legitimate business just to investigate a
former employee? A subpeana for the information required would be
sufficient. Sounds like the FBI and FCC are trying to send a message
to the scanner community.

I forget the name and I'm paraphrasing but a French philosopher once
said the level of tyranny in a country is directly proprotional to the
number of laws it has. I think we have reached tyranny in the USA.

What does that have to do with planing to do something bad?! Does that mean that all people with unlisted phone numbers are planing to do something bad? That all people who don't give their phone numbers or addresses to radio shack salespeople are satan's helpers?

Yes I suppose that radio shack sales person could follow you home, (of course someone COULD get this information, why volunteer it?) if that answers your irrelevant last question.

And just what was my "threat", my mendacious friend? All I did was
express a wish that anybody would do something to shut your sniveling
ass up. Where is the threat? Did I say that *I* was going to do it?
I can wish anything I want.

I also take exception to your saying that I called you stupid. You may
very well *be* stupid but I am much too polite to bring it to your
attention. What I did was point out that Bill might have a low
tolerance of idiots. If that caused you to conclude that you are
an idiot, than it's your mistake, unless of course you are an idiot.
If you are an idiot then perhaps I have done you a service by
indirectly bringing it to your attention but at no time did I call you
stupid. I would be glad to do so if it will make you feel better but I
doubt it would help your low self esteem.

You seem to be adept at twisting other people's words around. Are you
a lawyer?

Need a Good Laugh?

http://www.potg.com/
See: Why everyone on the internet is talking about this progressive new website; why up until now, this site has grown simply by word-of-mouth.
Hear: The show that is breaking boundaries on the radio, making it an entertaining medium once more, and why certain sites have already heralded it as "the show that will redefine radio and will usher in a new style of comedy for the 21st century."
Taste: The difference between Planet of the Grapes' potent style of humor and the type of humor that makes you turn off your television or radio in disgust. The show's hosts guarantee that whether you like it or not, it is impossible to deny that it has a unique, fresh style.

The Hosts: Deaze Beans, Yahdderman, and U.B. Jackson
The Show : Planet of the Grapes
The Site: http://www.potg.com/
The Reason: Join the bandwagon that is headed into the future of comedy!

>SSB also...

Not always. SSB faces greater degradation against some forms of channel impairment than does CW. But that's very faint praise for CW because there are much better methods you can use than either CW or SSB. Going down that road leads to arguments about what is "good enough". In conditions where SSB is "good enough", concerns about other methods become moot. And in truly extreme conditions, neither SSB nor CW can hack it, but we have other methods which can.

To put it in piloting terms, if you want true all weather capability, you won't depend or either SSB or CW. Neither can really hack it when the soup is really thick. But there are digital techniques which can.

Hello!

I use an "L-bracket" that mounts to my trunk. This fits just under the lip of my trunk. It will work anywhere.

I also highly recommend that you spend $40 - $50 on a good antenna. Any communications shop will sell the best. The two top one on the market are:

Larsen NMO 150 Cut between 154 & 156 for VHF Hi-Band.
Maxrad 150mhx Cut between 154 & 156.

They also sell antenna for other frequencies.

I have several and they work rerally, really well!

Is the requirement that most military pilots, special forces (Seals,
Green Berets, Rangers, etc.), ships radiomen, and commercial ship
radiomen know Morse "bogus"? Ask the pilot who was downed in Bosnia if
he was glad he knew Morse so he could signal with a flashlight after
his HT batteries ran out. Ask the POW's in Vietnam and Iraq how they
communicated with each other while in different cells. In WWII Europe
the resistance used Morse because an overheard voice conversation
could get you killed very quickly.

The only thing "bogus" about Morse code is whinning, lazy boobs who
don't want to put in the time or effort to learn a SKILL that could
someday be extremely usefull.

: And just what was my "threat", my mendacious friend? All I did was
: express a wish that anybody would do something to shut your sniveling
: ass up. Where is the threat? Did I say that *I* was going to do it?
: I can wish anything I want.

George-the-thug is also very proud of his thuggish nature!

: I also take exception to your saying that I called you stupid. You may
: very well *be* stupid but I am much too polite to bring it to your
: attention.

George-the-thug is also a liar. No surprises there. (Who's paroll(sic)
are you on *anyway*?) <snicker>

: What I did was point out that Bill might have a low
: tolerance of idiots. If that caused you to conclude that you are
: an idiot, than it's your mistake, unless of course you are an idiot.
: If you are an idiot then perhaps I have done you a service by
: indirectly bringing it to your attention but at no time did I call you
: stupid. I would be glad to do so if it will make you feel better but I
: doubt it would help your low self esteem.

<yawn> George-the-thug is gyrating in circles.

: You seem to be adept at twisting other people's words around. Are you
: a lawyer?

George-the-thug can't quite get his hands around this one. Previously,
he accused me of being on ICOM's "paroll." Now he wants to know if I'm a
laywer.

Wanted to buy

PRO-2004 scanners: basket-cases, junked, not working.

I need them for parts now that Tandy no longer supports the
PRO-2004. Will pay upwards of $25 + shipping, depending on
overall condition, etc. Not really interested in working
units unless the price is "right".

E-mail me with particulars & your best offer. Or use
contact data in my sig box below. Thanks!

I was disappointed when my Uniden BC235XLT Trunk Tracker started picking up cellular transmissions when I came close to certain cell sites in my area. There is one particular tower that totally innundates my TT if I am trying to monitor conventional 800 Mhz freqs. I was under the impression that because the TT is triple-conversion, that it is supposed to be "immune" to cell and other interference. Any one else have this occur?

WEll I have to agree, BUT until it changes, there is no way to get
past the Tech license.

I complained and hated CW until one day I realized that I was gonna
die a Tech unless I started working on it.

It took me about 60 days to go from 0 to 13 WPM, and passed the
Advanced theory the same day.

Then I realized that I had been listening to the characters at 18 WPM,
slowed down to 13 WPM, and decided that I'd give the Extra a shot.
Thirty days later, I got my Extra.

I found I only hated CW cause I couldn't DO it!!
I finally found it to be actually fun.
Many people I know couldn;t believe I had worked that hard to get the
Extra, but I knew if I was ever going to get it that I had better
strike while the poker was hot!!

I believe almost anyone can do it, it just takes time, and
determination, and a real committment!!

Good luck!!n Fri, 31 Oct 1997 01:49:02 -0600, "Dr. Bellows"

Hi,
I need some urgent help about mods for the Yeasu VX-1R. I need to meet up with my friend tomorrow in Las Vegas and he uses the FRS radio. I need to be able to transmit at 465.xxx MHz.
Anyone know how to modify it? I tried join the jumper 0 and 1 and reset the machine but it didn't work. Is there any other place I have to mod?

Thank you very much

Chad

Depending on the age and condition of your radios, I would say a
sensitivity problem is more a problem with your antenna and
possible any co-ax feeding it. What models do you have?

> Someone suggested that I
> look for a Yupiteru MVT-7100, which is supposed to be one of the most
> sensitive handheld scanners made. Although I had never heard of "Yupiteru,"
> I looked around the internet and found a new MVT-7100 for $305 shipped.
> Would this be a better radio than another Uniden or RS scanner for $300?

Better in what ways? It will be MUCH more sensitive. Which is good as
long
as you don't have lots of strong RF activity in your area. If you do,
you
could be opening yourself up to headaches in terms of strong signal
overload, i.e. intermod.

The 7100 has GREAT audio. The best in a handheld as far as I am
concerned. It has some nice features but not all the bells and
whistles you will find on many newer radios. These are included
on the sexy MVT-9000.

Scanning and searching is kind of slow. And the 100 channel banks
are not that practical. But it has very wide receive coverage, does
HF wonderfully both in AM and SSB, great audio and it's easy to
use(once you get over your Uniden-itis).

Depending on which Uniden models you have, the 7100 is likely to have
more birdies than either of them. Are you sure you're having problems
with birdies and not RF noise from local electronic devices or leaky
cable TV co-ax?

> Is the 7100 really as good as many claim it to be?

Yes it is(IMHO). I hold mine in very high regard. Even though it's not
the most feature laiden model due to its age, it was my favorite radio
until it was replaced by the MVT-9000. Even now it gets a lot of use;
which says a lot considering I own about 25 handhelds.

> Is it well made?

Very well made.

If you end up getting one, let us know what you think of it!

I have 2 factory battery packs for my BC3000XLT. I charge them fully and discharge them fully. Now that they are 2 years old I get about 1/2 the life I should out of them. Would anyone know of a better aftermarket or updated battery for this unit and who is selling same if they exist? Is there a NiMH battery for this unit?

Then you must know more about law than the Attorney General who told California that anyone who perscribes Marijuana under State law, will be prosecuted under Federal law. And the Judge in Florida that threw out a case of someone being prosecuted under it's anti-scanner law, because Federal law protects Ham operators regardless of any state law.

Hi.

I have just purchased an ICOM R10 receiver. I also purchased a CT-17 level converter - a black box designed to control it. I bought it under the impression that I could program memories (etc) from my PC - easily - not so. There are other tools to do that, and I have ordered them. I have decided to pursue the CT-17 option, but only a command table comes with it.

Does anybody out there have a sample program/application where they have used a CT-17 that they could send me? Icom say they don't supply them.

While I'm at it, although Icom say that the CT-17 can talk to the R10, there is no device listed in the CT-17 table that it refers to.

If anybody can provide any information in regards to these units, I would be most grateful.

Greg Hains

I would be interested , too.
I was under the impression that you did not need a black box with the
ICR10......that the circuitry was in the radio and you only needed a
cable.
Maybe I have misunderstood the original post ?

yeah !! otherwise, we don't have anything to discuss !!

>>The Morse code ain't dead yet.
>
>>No one said it was. Use it all you like.

yeah, open up HF bands to no coders... and make the license such that
you have to have CW in order to use CW.

> This is the USA, land of opportunity.

you are right.....................................

>>It should, however,
>>be dead as a requirment. THAT is the issue, not the use
>>of morse.

yeah, but I think it makes sense if you say, "no coder licensees are
not allowed to transmit CW without passing CW qualifications."
in North America, the no coders CAN transmit CWs, say above 30 MHz by
technician... which doesn't make sense.

>Who says so? You?

me too. millions of others too.

> A bunch of folks who can't or won't (more likely) put forth
> the effort required to reach the license level they desire?

I know I can get to the level that I desire. I can send 35 wpm + I
can receive up to 12 wpm. I do make contacts by using CWs on
6m+2m, but I don't have CW qualifications yet. I don't bother to
take the exam while I am busy for school so by the end of christmas, I
will get it. I will get CW qualifications, but I will

complain against it. I really don't understand why no coders
don't have pridilege to HF bands. NO MAKE SENSES.
I have advanced license here in Canada, but I am also against it.... I
don't understand why you have to have "advanced" to operate the
repeaters or to operate club stations. Building the equipment ?
sure. it make senses.

> There is no reason
> to change this requirement unless and until there are no CW sub-bands and it
> is agreed to internationally.

and what you are saying if ITU agrees to change, you have no complains
?

>Seriously though, you seem to be very dedicated to your cause. I can't say I
> wish you luck with it becasue I simply don't agree with you. But, it would
> seem to me that your efforts are better suited to .policy and not the other

most of scanner users will become the amateurs eventually.....

>Why not consider encouraging your members to use .policy and not use so much
> space on those groups for which such posts are ill-suited. I would appreciate
> such a jesture and I'll bet others would also.

then what do you discuss in MISC ? weather ????

>Then I could use the time I would save (by not getting involved in this issue)
> to make a few contacts on those much-sought-after Extra class sub-bands. And
> you could work on your code speed! Hi Hi, oops, just can't seem to shake that
> CW lingo. Some how that darned stuff has really gotten ingrained, hasn't it?

by the way... here in Canada... you only have to have 12 wpm to use US
extra subbands... 5 wpm actually has prodivilege for some US extra
subband portions. in Japan ? only 9 wpm for all US extra
privilege !! Good luck on your contacts !!

Well, thats two and one probably has less than 100 licensed amateurs.
Does one
country and one small island count as 'several'?

If your above information is correct then I suppose the amateurs in
Japan are whining about not being able to run 1KW unless they can copy
12 wpm.

The spoken word often has accents that makes it difficult to understand
the exact word, regardless of whether or not the speaker is "pronouncing"
(i.e. writing) it correctly. Code has no accents. Check.

FS/FT: Black Jaguar BJ*200 Pocket Scanner - Unique!! Never heard of it? Well I hadn't either until I got one! Let me know if it is more common than I think. It comes with rechargeable batteries and a wall charger. It is a thin (a little over an inch) keyboard 7 digit programmable hand-held scanner. It has an LCD display that shows the mode (AM/FM) Channel, frequency. It also shows if the channel is locked out, the priority channel and if delay is active. The scanner has 16 channels. The frequency range is kinda different and is:

26-29.995 Mhz (Includes 10M)
60-88 Mhz (RC Airplanes?)
115-178 Mhz (includes 2 M)
210-260 Mhz (includes 225)
410-520 Mhz (includes 70cm)

$69.00 + shipping or Amateur Radio Equipment trade All trades considered!
Here some of the stuff I and looking for

Rotor and control box
2m/440 antenna yagi or vertical
225 Mhz antenna Vertical or yagi
wire antenna components insulators
Good coax like LMR-400 etc.

I'd like to know your opinions on these two scanners (and other handheld at that level).

The 8000 has a computer interface but the 9000 seem to be better constructed (more resistent, better HF reception, ...) and having better options (to what I saw in reviews).

The two are about the same price and the save level of pros/cons but if I want to plug my comp to the AOR, I'll need to buy another $$$ interface...

I'd like to know your oppinions on these, where can i get it for the lowest price (I'm from montreal region, yep, canadian) with cell unblocked of course :) , what you think of them after extensive use (1 year, 2 year, ...)

Has far, I only saw Durham Radio that are Canadian resaler (less trouble when it come to shipping, no duty for passing country lines, COD possible, cell unblocked, ...)

Anyway, it's not for very soon but I'm realy thinking of getting one of those someday not too late. Eh, anyone need to have a dream :)

> 115-178 Mhz (includes 2 M)
> 210-260 Mhz (includes 225)
> 410-520 Mhz (includes 70cm)

You would often find you could enter frequencies well outside these
"published" limits, also.

All the best

3166. Is Yupiteru MVT-7100 for real?

Newsgroup: rec.radio.scanner
Date: 1997-11-03 00:00:00 UTC
From: Marconi <spamfree@email.box>
Message-ID: <01bce873$20f2d700$052da2ce@default>

Cross-posted to: alt.radio.scanner,rec.radio.scanner

I own two Uniden-made scanners, and I have been disappointed by their sensitivity and the amount of birdies they find. Someone suggested that I look for a Yupiteru MVT-7100, which is supposed to be one of the most sensitive handheld scanners made. Although I had never heard of "Yupiteru," I looked around the internet and found a new MVT-7100 for $305 shipped. Would this be a better radio than another Uniden or RS scanner for $300? Is the 7100 really as good as many claim it to be? Is it well made? Please let me know before I place my order. Thanks to anyone who responds.

3167. DISASTER COMMUNICATORS NEEDED IN SO-CAL

DISASTER COMMUNICATORS NEEDED:

The IMPACT Disaster Response Unit is looking for volunteers to help staff a one-of-a-kind Disaster Response Unit. The IMPACT Unit is on-call with most public service agencies through-out Southern California. These agencies include Fire, Police, Sheriff, CHP and more.

With the expected winter storms of El-Nino, IMPACT is going to be very busy and can use lots of help. We utilize all types of communications; including CB, Amateur, GMRS, FRS, VHF/UHF Commercial Bands, Cellular and more. You do not need any special training or equipment to be part of this unit.

Send your snail mail address, or any questions to
sct_impact@bigfoot.com
and we will send you more information and an application for the IMPACT DISASTER RESPONSE UNIT right away.

Thanks,
IMPACT Board of Directors

Hi to all, I have a Uniden/ Bearcat BC-200XLT scanner that receives
full cellular also the cordless phone frequencies. The 200XLT
is in very good condition. It has 200 memory channels, leather case,
manual and a good battery pack with charger.
I have seen this scanner on the newsgroups for 200 dollars.
I would like to trade for a Yaesu FT-50R with FTT-12 keypad
(if possible). The FT-50R must be in good working order on both
VHF and UHF bands. It can be cosmetically challanged as long as it is
fully functional. I will balance the deal with cash if need be. How
much cash depends on the condition of the FT-50R.

NOTE It may be illegal to receive cellular in your area.
Please e-mail me direct at: mrusso@hoflink.com
Thanks, Mark N2FLF

The UBC-3000XLT and BC-3000XLT are the same other than the CPU which
controls the coverage.

The Battery Pack (BP-2500) is the same on both so the adaptor used with the
BC-300)XLT will work although all you just need is a 120v AC Adaptor with
12v DC and the correct jack size.

Hope that helps.

I don't know about NiMH packs but try Metro West in Il. (Grange Park ?).
They have/had battery packs with higher capacity for extended operation for
earlier Bearcats (100XLT/200XLT) and may have something for the 2500/3000XLT.

All the best

true. 1000W HF max power output for 12 wpm, but you will get full
access to HF with 9 wpm (but you are limited to 200W max).

A search warrant is the best way to go if the evidence that you're
looking for could easily be destroyed, hidden, etc on receipt of a
subpoena. With a search warrant you go to the place and find the
information, and related information, yourself. It's a little more
broad in application. If one believes there may be others involved, or
maybe even the comany, a search warrant is a better way to go. A
subpoena is more useful to compell a person to testify before a grand
jury, to get the release of an unlisted phone number from the phone
company, etc. Subpoenas can be received, and the recepient can lei
and say that they don't have the records, send false documents, etc.

I don't know anything about the case itself, I was just commenting on
the reasons to choose between a subpoena and a search warrant. I've
obtained a number of each in my job.

BTW I support 100% a person's right to posess and use any type of
scanner or radio receiving device, and listen to any radio signal - I
have a bunch of 'em myself.

3177. Consumer electroncis onboard aircraft

Newsgroup: rec.radio.scanner
Date: 1997-11-03 00:00:00 UTC
From: frussle@erols.com
Message-ID: <346c43b7.30295733@news.erols.com>
Source record: 181348

First, let me quote the letter of the law:

Federal Aviation Regulation 91.21: PORTABLE ELECTRONIC DEVICES

(a) Except as provided in paragraph (b) of this section, no person may operate, nor may any operator or pilot in command of an aircraft allow the operation of, any portable electronic device on any of the following U.S.-registered civil aircraft:
(1) Aircraft operated by a holder of an air carrier operating certificate or an operating certificate; or
(2) Any other aircraft while it is operated under IFR.

(b)Paragraph (a) of this section does not apply to--
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device that the operator of the aircraft has determined will not cause interference with the navigation or communication system of the aircraft on which it is to be used.

(c) In the case of an aircraft operator by a holder of an air carrier operating certificate or an operating certificate, the determination required by paragraph (b) (5) of this section shall be made by that operator of the of the aircraft on which the particular device is to be used. In the case of other aircraft, the determination may be made by the pilot-in-command or other operator of the aircraft.

==========
Basically, what this means is that you can use what you want only at the discretion of the pilot, crew, and airline management.

Here's why:

Avionics is a very old field of radio technology. The reason is because no sooner was it developed in the early 1950's, when it became a world-wide standard. Airplanes being the international transportation that they are, a change would require the cooperation of more than 100 countries. That's not going to happen any time soon.

Aircraft use Non-Directional Beacons (NDBs) below the AM broadcast band for many instrument approaches to airports. They use VHF Omni-Range (VOR) receivers for airway navigation, and they use specially phased VHF and UHF arrays in a configuration known as an ILS to home in to a runway. And although GPS is being phased in quite rapidly, it still isn't legal for use in all situations, especially

precision approaches, such as the ILS.

None of these older systems are particularly interference-proof. They are *all* AM (amplitude modulation) based. Each approach in the USA is certified periodically in an FAA airplane running a minimally compliant set of avionics.

Thus it's quite possible for a laptop, a scanner, or even a CD player to cause interference. These devices can even be FCC part 15 compliant. That's not the issue. FCC part 15 is supposed to *limit* emissions from a radio, not guarantee that they're *eliminated*. Have consumer electronics caused interference? Yes, but fortunately not very often.

Most airlines take the "below 10,000 MSL" rule as a good starting point. At that altitude, the airplane isn't likely to run in to anything should it happen to stray a mile or two off course.

However, during the approach to an airport, even minor interference send you far enough off course to give you very high pucker factor (remember, we're talking about causing interference to an AM system here). Going off course by even as little as 1/4 of a degree is pretty serious when you're riding a 3 degree glide slope down to 100 feet at over 150 MPH (as is commonly done in a CAT II ILS approach). Interference is rare, but it has happened (see NASA's CALLBACK newsletter for Spring, 1996)

As for cellular telephones, forget about the aircraft navigation interference for a moment, think about what happens on the ground: Your signal will hit every cell for hundreds of miles. It pretty much defeats the purpose of cellular telephone if your single signal fills up all those cells. So the FCC has a regulation (I think it's in Part 22) which states that you must turn off cell phones once the wheels of the airplane have left the ground. It is perfectly legal to use one while taxiing on the ground, however. I know of several pilots who do just that to pick up IFR clearances at small air fields where there is no RCO available.

Speaking as an electrical engineer, an instrument rated private pilot, and as a ham radio operator, let me assure you that 99.9% of all consumer electronics is quite harmless. It's that last 0.1% that everyone is scared of. We have no easy way to figure out whose computer or scanner is likely to cause problems prior to boarding the airplane, so the FAA wisely bans them all unless the pilot is aware of them and allows their use.

After all, would you trust your life to some kid's favorite electronic toy? I didn't think so.

This is a final version of my suggestion for a new licensing system
(all countries):

Temporary Guest Permit (two weeks special permit, no tests required.
no renewals):

What you can do:
- Cannot set up own station
- Callsign will not be issued (but permits guest operation)
- Privilege same as "Basic"

Basic

Exam contents:
- International Regulations
- Q-Codes
- Phenotics
- How to make contacts (called station and then calling
station etc.)
- Equipment Operating Procedures

Priviledges:
- Maximum Power Output 50W
- Under 4 MHz, Above 28 MHz & All modes except CW mode

General

Exam contents:
- The things required in "Basic"
- Basic electronic theory, components of transmitters,
receivers etc.

Priviledges:
- Maximum Power Output 200W
- Under 10 MHz, Above 24 MHz & All modes except CW mode
- Club Station

Advanced

Exam contents:
- The things required in "Advanced"
- Advanced electronic theory

Priviledges:
- Maximum Power Output 1000W

- Full Access except 10.100 MHz -10.150 MHz & All modes except
CW mode
- Club Station
- Repeater

5 wpm (must hold basic, general or advanced)

Exam content:
- 5 wpm receiving

Priviledges:
- CW Mode Operation

10 wpm (must hold basic, general or advanced)

Exam content:
- 10 wpm receiving

Priviledges:
- 10.100 MHz - 10.150 MHz
- CW Mode Operation

>DE KA3WRW

The oscillator - the part that radiates - in a standard FM broadcast radio operates from 109.4 through 129.4 which is in the air navigation and communication band from 108 to 138. That's why.

Incidentally, I was taking my scanner outside while gardening the other week, which is my habit; but I also wanted to listen to an AM broadcast on 580kHz. When I picked up the two the scanner radiation completely destroyed reception on 580. Since the 580 station was a local 50kW station, and there are navigation beacons between 510 and 530 running just a few hundred watts it made me very much aware of the dangers of personal electronic toys on aircraft.

Just wondering if anybody out there knows anything about a pro 67. I have an opportunity to buy one but I can't seem to get any info on whether it's any good. Can it be modified?

Thanks
Larry D.

I am wondering if there is any way to make my old Regency scanner able
to scan to 999 mhz or anything high like that.

From the FAQ article SCANNER RADIO REVIEW BRIEFS:

[...]

PRO-67: 1997 vintage. Good portable 200 channel scanner
using up conversion. Replaces PRO-51 and has better image
rejection and super fast scanning. Service Search lacks
police frequencies. Fixed AM/NFM modes and step sizes. Can
lock out up to 20 frequencies during a search. Can recharge
both Radio Shack's optional, monolithic NiCd pack, and AA
cells within the scanner. Frequencies adjacent to the
cellular phone bands censored so our PRO-67 will not receive
868.9625 or 823.9625 MHz. Intermediate Frequencies are
254.4, 10.85, and 0.45 MHz. See "The Radio Shack PRO-67,"
by Bob Parnass, AJ9S, in Monitoring Times, October 1997.

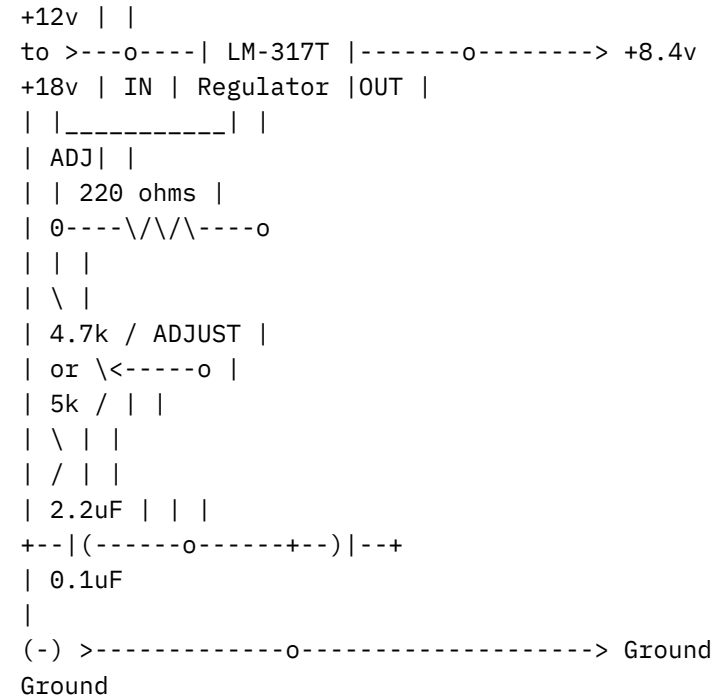
Okay, if you want to do that, it's cool, but leave the OUTput tab unhooked to the main PCB until it's been adjusted for +8.4v. And also, the backplane of the LM-317T, if I recall correctly, needs a mica insulator because it can't be directly grounded. You can and should mount it in Q32's position, though....and the base need not be hooked up.

Just the +12v power supply to the IN tab, a couple of capacitors, and the adjustment circuit of a resistor and a trim pot between the ADJ and OUT tabs. Here, I'll show you:



There, that ought to take care of it if there were any doubts. Just don't ground the metal backplane of the LM-317T, so use a mica insulator and a tiny glop of heat sink compound between the chassis and the mica and another

tiny glop between the mica and the backplane of the LM-317T.

Closing notes include: the emitter pad for Q32 is the OUT
pad for the LM-317T. The collector pad for Q32 is the IN
pad for the LM-317T. The base pad is not used, and you can
remove D50, C226, C227, C225, and R227 if you like. Just be
sure the OUTput is less than +8.4 before you solder it down.

Start with +8.0 volts and then slowly work it up to +8.4v as
you evaluate the receiver's performance. You may find an
optimum setting less than +8.4. I recall I did....but each
unit will vary a little.

> My 2004's power supply wants to output around 16v, which is probably why
> my second Q32 failed from the start. Do you have any ideas on what to
> look for in bringing the voltage back down to 13.8?

Sounds to me like your voltmeter might not be accurate. You
better verify it. Otherwise, the only thing that could
cause it would be an over-spec transformer, T-801.

Now what I always recommend (and have done for myself) is
remove that T-801 altogether and power the unit at the EXT
DC jack with a +12v supply, even a wall cube adapter rated
at 12v @ 1-amp or better. +13.8v regulated is great, too.
Removing the internal power transformer eliminates a LOT of
heat buildup in the unit and leaves a lot more room for mods
and hacks, too. heh heh heh......

If you use EXT DC, put an in-line 1-amp fuse in series with
the (+) red lead. On the inside of the scanner, jumper
across (short out) R256 standing on end by the EXT DC jack.
This is an underrated 1-ohm, half-watt resistor that burns
open all too often when external DC is used. It's not
needed and can be jumpered across. It's purpose is as a very
expensive fuse.

> BTW, I bought all 3 of your books from Grove last week and they are,
> without a doubt, excellent.

Hell, I refer to them all the time, myself. Dunno what I'd
do without 'em....and I really ain't joking to speak of,
even though it sounds funny. ;-) (Thanks for the kind
words - a few go a long way!)

In article <345AB515.1766@idnet.gov.us>, SteveFelix@idnet.gov.us wrote:
>Do any state laws duplicate or contradict any federal laws?

Both, in a way. Many states have laws that duplicate Federal statutes. Where there can be differences is in the ways each state's highest courts interpret their own constitutions. The U.S. Supreme Court ruled that, in areas where the rights of state citizens are concerned, each state can rule differently on standards of law enforcement conduct if they base the ruling on their own constitutions. No state can interpret the Federal Constitution in opposition to the Supreme Court, but they can hold their police agencies to higher standards of protection of citizen rights if they can justify it by their state constitution (Oregon vs. Hass).

>if so, which would be enforced?

Depends on who is doing the enforcing. The FBI will enforce Federal laws in all 50 states. Local and state police can enforce Federal laws, but will focus more on state laws and local ordinances.

Service, Schmervice-we're talking about a manufacturer's warranty.
Manufacturers tend to honor warranties if they plan on staying in
business. Why wouldn't they serve the customer. I am *not* gyrating
in circles (which is redundant, by the way <Snicker>), I am trying to
have an intelligent discussion but you seem to have a problem holding
up your end. It might *seem* that I am "gyrating in circles" if your
only purpose here is to flame and raise hell; am I interfering with
your agenda by trying to stay on topic?

You might be in for a hell of a surprise, MD. It took me a lot less time to become proficient in IBM 704 machine language programing than it did to become proficient in Morse. And I had to learn it out of the IBM manuals because nobody wanted to take the time to teach a kid to program in it.

It impressed the old guys that I figured out on my own how to optimize the code placement on the drum so that it was just coming under the read heads when the processor was ready for it too. I knew the number of T cycles every instruction took without even thinking about it.

Lest the above sound like a brag, I know several kids today who are better programmers than me. And I've been at it a very long time. Kids seem to find it very easy to think in terms of the machine. They grasp right away that the machine does exactly what they tell it to do, and not what they really meant it to do. That's something adults often have a hard time really accepting. Programming is just a form of Simon Says, and Simon is very literal minded, as are most kids.

The way I understand it, DES offers 720,000,000,000,000,000 possible
keys, while DVP offers 236,000,000,000,000,000,000,000,000. Give or take
a few 8-)

It is rumored the NSA has the supercomputers neccessary to crack DES
by a brute force key search attack in one hour.

To reply, remove the NOSPAM from my e-mail address.

Another point to consider: Most station studios are not at the transmitter
location. Many use UHF relays to the transmitter site.

Well, cool. But I demand to be able to transmit Blue Oyster Cult, Iron Butterfly, and the Doors. Of course in the bottom 25 kHz of each HF band, only Jerry Vale records can be played. :-)

This is a basic "conflicts of laws" issue, and the Federal law
pre-empts state law under this hypothetical circumstance.

-Bill Cheek-

==========
PRELIMINARY NOTE: This article is self-contained and you really don't need any other supporting materials other than the service manual for your scanner. Bear in mind, however, that only so much detail can be in an ASCII text file like this. If you want more detail than offered here, a hard-copy laser printed version of this article, complete with professionally rendered graphics is available for US$5.00, ppd. See my signature box at the end of this article for addresses, phone numbers, etc.
==========

What is an "S-Meter"? Well, it stands for "signal meter" and is used to provide an "RSL" (received signal level) idication of the strength of the incoming signal. S-Meters are all calibrated pretty much in the same fashion with two scales. The first 2/3 of the metering range is calibrated in "S-units", a fairly linear scale of 0-9. The units are read as S1, S5, S9, etc. S9 is the calibration point, generally meaning a signal at that strength is 100-microvolts, but mnufacturers sometimes use 25-uV or 50-uV as the reference for S9 signals.

The relative signal difference between S-units is typically 6 dB per S-unit, between S0 and S9, but in practice this can vary widely, from as little as 3 dB per S-unit to 7 or 8 dB per S-unit. Unless you know different, it's okay to figure 6 dB of RF change between S-units 0-9.

The last 1/3 of the scale is calibrated in decibels (dB) over S9 and is, of course, a logarithmic scale, typically in three 10 dB sections

though some meters go to 60 dB over S9.

Up to this point, you may think that S-Meters are useful only for measuring the relative strength of incoming signals, but think about it for a minute. What determines the strength of signals going into your receiver? More specifically, what factors are under YOUR control that determine received signal levels? I can think of at least four things right off: antenna type; antenna height; coaxial cable quality and length; and the correctness or precision of the receiver's electronic alignment (internal adjustments).

Therefore, there are a number of things you can do around your monitoring post that will affect the strength of received signals. Wouldn't it be nice to know if something you did had a beneficial or harmful effect? Sure! That's one powerful use for an S-Meter.

As an example, say you want to change out your coax cable and want to be sure the new stuff is better than the old. So first tune to a known consistent signal such as a NOAA weather station or perhaps an 800 MHz control data signal. Write down the S-meter reading. Then change out the coax (or elevate the antenna, etc). Then write down the new S-meter reading and compare the two. You'll know if you did right or wrong.

Many scanners are capable of supporting an easy to build and install S-Meter! Most Realistic scanners made by GRE-Japan with the civilian aero band, 108-136 MHz, can support this low cost, high performance S-Meter modification.

It takes special circuitry for a scanner to receive Amplitude Modulated (AM) signals because AM is an uncommon mode in the VHF/UHF spectrum. In fact, AM is used pretty much exclusively for civilian aircraft comms on 108-136 MHz and military aero comms on 225-400 MHz. Most scanner signals are Narrow FM (NFM). Wide FM (WFM) is used in the FM Broadcast band, 88-108 MHz, TV audio signals; and studio-transmitter-links. Everything else is pretty much NFM.

Therefore, most scanners are designed strictly with NFM in mind, and will not have either AM or WFM capability except as a costlier extra feature. That's why you pay more for scanners that have the civilian aero band, and more still for those with the military aero band.

If your Realistic scanner has the AM mode, and it will, if it has the civilian aero band, then chances are good that we can take advantage of its extra circuitry to add the simple, low cost S-metering function.

Scanners known or strongly thought to be capable of this easy S-Meter mod include the following listed in Table 1:

TABLE 1: COMPATIBLE SCANNERS FOR THIS S-METER MOD

PRO-2042 PRO-2027 PRO-39
PRO-2035 PRO-2024 PRO-37
PRO-2032 PRO-2022 PRO-36
PRO-2006 PRO-2021 PRO-34
PRO-2005 PRO-2020 PRO-32
PRO-2004 PRO-62
PRO-2003 PRO-44
PRO-2002 PRO-43

CAVEAT: Many of Radio Shack's later scanners are made by Uniden, the design of which leaves so much to be desired that this version of the S-Meter is probably not feasible. There may be other alternatives but are beyond the scope of this document.

If your scanner is not listed in Table 1, the best way to determine applicability of this procedure to your scanner is to review the main schematic diagram for your receiver section, and compare it to the circuit of IC-2, Q-12, Q-13, and D-33 of the PRO-2006. This circuit is used in all the above compatible scanners, and is required for this version of my S-Meter mod. Specifically, you will look for the NFM chip and AM detector diode shown in Table 2 further below.

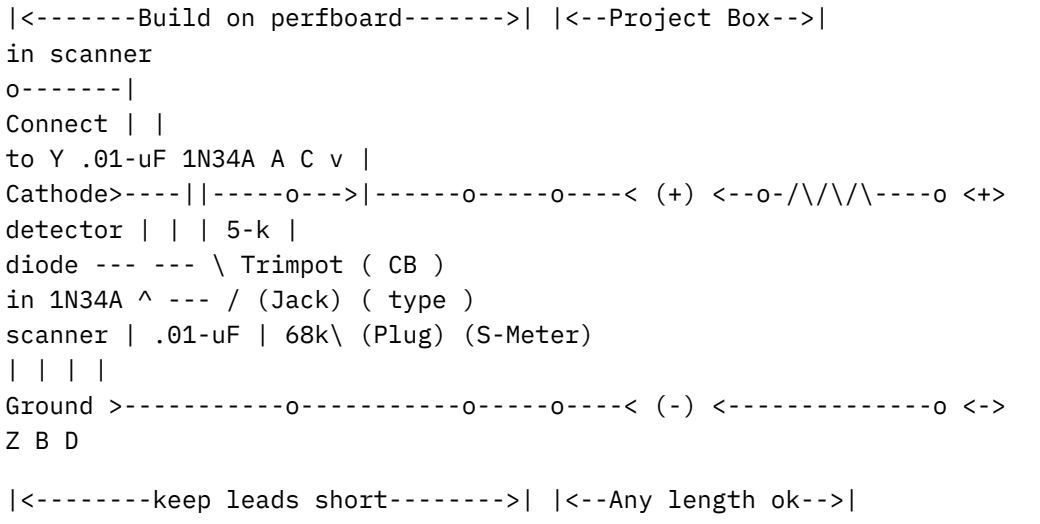
The AM section of the PRO-2006 is almost identical to the AM circuits for the scanners listed in Table 1. Each of these scanners takes its AM signal from the output of the 455 kHz IF filter that's attached to the NFM Discriminator chip. Part of the IF signal goes back into the NFM chip for NFM signals as needed. The other leg of this "Y" is that part of the signal that goes on to a separate AM processor. The key thing here is that both circuits are used full time. Special switch circuits do the controlling of which mode is actually in use, but the circuits are still on full-time. That's why we are able to use the AM circuit to power our S-Meter

The key point here is that you must identify and use the cathode of the AM Detector Diode as the pickoff point for your S-Meter signal. If your scanner is capable of this mod, it will have an AM circuit almost identical to that of the PRO-2006. Find it, and then locate the AM detector diode. The diode's banded end is the cathode where the S-Meter signal will be tapped.

For base scanners, build the simple circuit in Fig-1 on a bit of perfboard. For handheld scanners where space is at a premium, it may be best to not use a board, and just build the circuit of Fig-1 directly into the scanner, part by part. Start by soldering C1 to the cathode of the AM detector diode, and the anode of D1 to a handy ground. Then build the rest of the circuit around those two components. Following is Fig-1, the schematic of the S-Meter circuit.

Build the following simple circuit left of Points A and B on a piece of perfboard. The circuit to the right of A and B is optional, explained further below.

FIGURE 1: SCHEMATIC DIAGRAMS



THE PARTS: Radio Shack stocks the parts shown in Fig-1 except for the S-Meter. Diodes must be germanium, 1N34A or 1N60. Capacitors should be ceramic disks. Resistor (56k-100k) and trim-pot (3k-10k) are not critical. The circuit of Fig-1 must be as shown. If you use an external CB-type S-meter, so much the better....just build the meter of choice into an attractive or functional project box with a cable of any length from the box to Points C and D which should be wired to a male phono plug of some sort.

Most any analog CB-type S-Meter is ideal for this project, but the larger the face, the more readable it will be. There are thousands of junked CB rigs all over the planet, and most any CB or radio shop will have a bin full of them. The cost of a salvaged S-Meter should be negligible.

The scanner should have a mating female jack connected to Points A & B, installed in an out-of-the-way place for the plug from the external meter.

Keep the Point Y lead length very short, not more than an inch.

Connect Point Z to scanner PCB or chassis ground and keep that lead short, not more than 1 inch.

Connect Point Y of the S-Meter circuit via a very short wire to the cathode of:

TABLE 2: CONNECTION POINTS IN VARIOUS SCANNERS

SCANNER	DIODE	NFM CHIP	AM -near-
PRO-2042:	D-34	TK-10420	
PRO-2035:	D-34	TK-10420	
PRO-2032:	D-23	TK-10420	
PRO-2006:	D-33	TK-10420	
PRO-2005:	D-33	TK-10420	
PRO-2004:	D-31	TK-10420	

PRO-2003: D-122 MC-3357P
PRO-2002: D-119 MC-3357P
PRO-2027: D-24 MC-3361N
PRO-2024: D-24 MC-3361N
PRO-2022: D-29 MC-3361N
PRO-2021: D-24 TK-10420
PRO-2020: D-120 MC-3357P
PRO-62: D-302 MC-3361N
PRO-44: D-202 MC-3361N
PRO-43: D-302 TK-10420 or 10427
PRO-39: D-202 MC-3361N
PRO-37: D-122 TK-10420
PRO-36: D-114 TK-10420
PRO-34: D-117 TK-10420
PRO-32: D-122 TK-10420

Other Scanners: This mod may work with other scanners that have the civilian aero band of 108-136 MHz. If your scanner has 108-136 MHz and is not listed above, then find the last 455 kHz IF section, and locate the AM detector. Connect Point Y to the cathode or IF-side of the AM detector diode.

==========
NOTE: While this mod probably won't work with Uniden scanners nor Radio Shack scanners made by Uniden, a little R&D and experimenting on a Uniden aero-band scanner could prove successful. I don't own any Uniden scanners, but can assist you in your R&D if and only if you and I both have a copy of the service manual for your scanner. Contact me by e-mail if interested.
==========

WRAP-UP DETAILS: Points A and B are the metering points where any DC voltmeter can be used. S-Meter signal range will be about 0-1v. The circuit of C and D is an optional CB type S-Meter, and should be used external to the scanner. Therefore, it is ideal to wire A and B (length not critical) to a phono jack on the rear panel of the scanner for easy connection of the external meter. Use 1/8" or RCA phone jacks for base scanners and 3/32" submini phone jacks for handhelds.

METER CALIBRATION: Any DC voltmeter can be used directly at A and B including a bargraph LED display. If an external S-meter circuit is desired, then wire it as shown. Use a walkie talkie or other transmitter to send a strong signal into the scanner, and adjust the trimpot so that the meter reads exactly full scale. All other signals will then read proportionally lower. Too cool for words!

METER LIGHTING: You can embellish your S-Meter with a small pilot lamp behind it to illuminate the face. Many CB meters have such a lamp built into the body of the meter. You may have to tap 12-volts or other power from the scanner for the lamp, or provide external power, like for handhelds.

SUPPORT: I do not supply S-meters. I can provide other parts including printed circuit boards, assembled or as a kit. I will provide technical support of this project on the public network forums and/or by e-mail; never by phone. See the beginning of this article if you need a hard copy version of this article.

MOD BOARD INSTALLATION HINTS: Most modification circuit boards really need no special effort in the mechanical installation. I used to use fancy standoffs, bushings, and machine screws, nuts, and bolts, but no more, considering all my mods!

Now I loop a stiff #18-ga copper wire (RS# 278-1217) through a pair of ground holes in my perfboard or printed circuit; solder it securely to the board; and then solder it to a ground on the main board.

I solder the #18-ga wire to a chassis sidewall, or in some cases, to a ground foil on the main receiver board. This mount is rigid, safe, and easy, not only to install, but also to remove if needed. A "glop" of hot-glue on the bottom of the mod board prevents accidental shorts below it.

Enjoy S-metering at its finest!

Steve,

You'll probably not find one much cheaper that is worth the price most places are asking. I've seen some for $60-$70, but they are fairly flimsy units and lack any decent features. Opto has consistently put out good products including the Scout, the Explorer, etc. I have purchased the pager sized freq. counter for $100 and it is worth it. The opto has 2000 char mem storage, is real small, portable, etc. Check out their web page at http://www.optoelectronics.com/ and go to the new items page.

I'd suggest you save your money and buy the opto...

-Not affliated with Opto

SPS (photo@flash.net) wrote:
: I saw an ad in Monitoring Times for a decoder that was pager sized.
: It would listen to the tones in conversations on the scanner, and then
: display them on the digital readout of the pager sized unit.

: Has anyone used one of these or know where to get them for less than
: $90 each?

: Thanks.

Did you see the sly hand of government in this message????
Did you look very carefully at the texts?
Here it is:
> "...or are
> capable of readily being altered to receive such transmissions."

That is a broad term that can mean virtually anything. This is how
agencies and polticians get their way without making the real intent of
the law plainly obvious to the average American.
These sly politicians know exactly how to word a bill so that you will
think everything is okay when it really is not.

Not true. I know several people who became hams after hearing Morse Code. They thought it was very impressive that you could communicate around the world with so little equipment and little power. I am not very good at code but I think it still has a place in the hobby. If you were to take the time to learn it (if you don't already) and communicate with the people on the cw part of the bands you will find young and old are enjoying it.

This would depend on the jurisdiction.
If the State and Federal laws contradict each other, and a State Trooper gives you a citation, then the state law will be enforced. On appeal, the Federal law *may* rule, and may not, depending on how high the appeal goes.
For you lawyers out there, remember, not all Federal laws are pre-emptive.

3227. Help with BC895XLT trunktracker

Newsgroup: rec.radio.scanner
Date: 1997-11-04 00:00:00 UTC
From: earl@airwolf.oit.gatech.edu
Message-ID: <63o0oj$b91@smash.gatech.edu>
Source record: 181229

Does lockout work while in trunked search mode on the Uniden BC895XLT? It doesn't seem to work on the 895 that I have. Is my unit broken or is this feature not implemented as indicated in the instructions?

If I read the directions correctly (I've read them several times), then I should be able to prevent a trunk group ID from being monitored in search mode by pressing the "L/O" button when the unwanted ID is displayed. When I do that, "Full" is displayed for a second and the unwanted ID continues to pop up whenever someone talks on it. The instructions don't mention a "Full" error message. My lockout list is certainly not full, as this is the first ID I've tried to lockout. I went through the procedure to un-lockout all IDs (there should not have been any), but I still get this error.

I guess this won't be a big problem once I figure out which ID is which. I'll just use trunk scan mode then. In the meantime, it sure would be nice to be able to lock out the busy IDs to discover the others more quickly.

I have a BC235XLT Trunk Tracker for sale.
I'm asking $135, I'll pay shipping.

This radio is about four months old and works perfectly.

This radio has 300 channels and 12 bands.
Includes 2 rechargeable Ni-cad batteries with charging cradle, original
box and manual.

This price is firm and I'm not interested in trades.

mailto:digital-persona@usa.net

Thanks

>things under a rock...

I'll take someone with great logic and reasoning, but slightly inferior spelling ANY day over someone with impeccable spelling and grammar who cannot make a sound case for his argument without resorting to ad hominem attacks and name calling.

It's not "laziness" to question and boycott a system that rewards irrelevant and unneeded knowledge. I have a 170 IQ and a university degree -- anything I put my mind to learning, I could learn. But I refuse to kowtow to senseless requirements and waste valuable time learning an unneeded, unwanted, and irrelevant skill, just to join the "old guard" elite. Some of us were brought up to question "why" instead of blindly following "tradition" like so many sheep.

>and moan about it as an excuse to insist on maintaining the Morse text.

Rote memorization is not the issue. I've publically stated before on
numerous occasions that I doubt anyone seriously "memorizes" the question
pools. They *DO*, however, drill sufficiently and memorize "cheat sheets"
in order to recognize the correct answer on the examination. Perhaps
increasing the question pools by an order of magnitude (10x) would
cure this problem. However, given that the larger the question pools
are the more time needed to maintain them, I believe a "critical mass"
will eventually be reached where the VEC structure doesn't maintain
any additional questions.

I can't believe that anyone seriously believes that the existing
question pool concept we use to license people in any way, shape, or
form really works. In the seven years I was in college, and five
years I've taught at the college level, I've only *once* seen a
professor give the exact questions and answers out prior to an examination--
and, that was for a senior-level advanced physics class, where the
students were expected to solve the problems and show all their work
(the "answers" were more of a way to "check" your work, to see if you
solved the problem correctly, than the actual item you received 'credit'
for answering correctly.)

>Why don't you just admit you want the Morse test for some real reason,
>like "I had to do it ..." or "It keeps the bands from being overcrowded"
>or "I like Morse and I'm afraid there will be nobody to beep with in a
>few years if we don't force everyone to learn Morse." (all of which are,
>of course, bogus reasons for maintaining the test, but at least one of
>them, or something similar, would be more honest)

I just got my new bencher straight key in today, and I'm so looking forward
to using it this evening on 80 meter novice CW. What will you be doing
tonite amateur-radio-related, Carl, other than bitching on USENET? I'll
be hanging out around 3703 -- why not listen in and give me a call if you
can hear me?

I've already publically stated that if we could eliminate the question
pool concept, and replace it with some form of exam generation program

that eliminates the problems a question, then I have no objection to eliminating the existing morse code examination. I do have objections to eliminating the code exam without taking any form of comprehensive licensing-process overhaul, however.

3238. PRO-60

Newsgroup: rec.radio.scanner
Date: 1997-11-04 00:00:00 UTC
From: Jason <johndc@erols.com>
Message-ID: <345FD2B8.1AA9@erols.com>
Source record: 181240

I recently found the discontinued PRO-60 at RS for $170.

1) Is that a good price?

2) Is this scanner better than the PRO-64 (besides the # of ch.)?

Any help would be appreciated.

Jason L. D.

-- At least I think its a PRO-60, its got 200 ch., 12 bands... --

I have to go by my memory on the years but....

The cellular concept was developed the 40's or 50's. Bell worked on it
in the 60's and I believe AMPS was standardized in the mid 70's.

Let take 1979 for an example year. How many scanners wer available in
1979 that covered 800 MHz? Not many. In fact there was not much
consumer equipment available that operated that high except TV sets. In
the 70's even hams had to convert commercial gear to get on UHF
(420-450) in most cases. So, though it was pretty lame, there was an
inherent level of security because the average Joe didn't have, and
couldn't afford the hardware to eavesdrop.

I think it is really a case of the cellular industry underestimating
consumer technology. Sure they could have added voice inversion, or
something similar as you suggested, but what good would it have done?
Again, technology today allows anyone with a sound card in a PC to
decode that. Just like any schmo can buy a scanner that can be modified
to cover the cellular channels.

> the clear using a very common modulation. And when these security
> concerns are brought up, the response of the industry is not to acknowledge
> that the system is easy to listen to, nor to design in some security, but
> to push for laws making listening illegal.

Why not? It's cost effective. I have never heard any cellular provider claim there AMPS systems are secure. I do remember the claims about how cellular service was as clear as regular phone - that was the only big lie I remember <g>. And they did design security. Digital cellular is available almost everywhere. It's biggest marketing point is better security (followed closely by the lie about digital sound quality <g>).

> Now, these don't really seem to be technical issues. I find it extremely
> hard to believe that *all* of the engineers who designed AMPS were
> completely unaware of the privacy issues. And I think it completely
> implausible to believe that privacy could not have been improved by
> technical means in (say) the last 5 years. But the decision to push
> legal methods of giving the illusion of privacy rather than just fixing
> the problem was certainly the decision of the cellular industry.

I would also find it hard to believe the engineers were unaware of it as well. I am sure they were aware of the privacy *issues* but probabaly didn't think it was a major problem considering the technology of the day.

I personally like the idea of cellular eavesdropping prohibitions. I don't buy the arguement that you shouldn't write laws you can't enforce. It *can* be enforced. You can't catch every person who is speeding on the freeway, but t doesn't mean we shouldn'thave speed limits. It get enforced if you get caught. I also don't consider such laws to be unconstitutional - I haven't seen a thing in Constitution that protects one's right to be invade other peoples' private conversations.

I am no idiot. I know that my cell phone calls can be monitored. But if I caught somebody doing it, I can take action against them because they are violating the law - the law is tool tht can be used when applicable. But if you do it in the privacy of your own home and don't make it known that you are doing it, I guess you can go through life getting away with it. I don't care. Just don't do anything dumb that gives the radiocops probable casue to kick your door in.

Law or not, I can't see why its such an issue. I asked the scanner NG a long time ago, "what is the facination with listening to cellphones and cordless phones?" I was amazed that people had the cajones to be honest and admit that they scan for scandalous conversations - guys calling hookers, lying to their spouses, talking dirty, people making drug deals, etc. And then these mouth breathers got pissed at me when I called them vouyers! AFAIAC they rate right up there with peeping toms that use telescopes to look through their neighbors' windows.

So even if it was perfectly legal to listen in on cell phone calls I would still say that those who practice it are in need of a real life or mental health care.

Regards

No I was arrested and pepper sprayed for telling a 'rent a cop' (security officer) that he was just that, a rent a cop. Then he decided he was going to get tough so I hit him with my scanner (thankfully no damage to slightly modified armor cased scanner). Just when he was down all of his buddies showed up and the black helicopters landed from the nearby military installation and bombers started flying over and dropping pepperspray bombs. Now the city wants to ban scanners because they are deadly weapons. I had to break into the police station to recover my scanner and now I sit listening to it with my stockpile of weapons waiting for them to come back after my scanner. They will get it when they pry my cold dead fingers from around it...

I have the 2940u (non wide) card. To my knowledge, you cannot run this scanner on a wide SCSI controller. Just won't do it.

The next question is in regards to NT. To my knowledge, there are no NT drivers for any Tamarack scanner.

Super response -- right on the mark. You hit it on the head, David, when you pointed out the fact that we are fortunate to live in a nation that values freedoms and has codified these freedoms in our basic law of the land. Serving on active duty, I've lived abroad in nations which are nominally free but which do not accord their citizens the same liberties we take for granted in the USA. Not to get to sappy, but to quote a comic Russian immigrant, "I love this country!!!"

They're not "rebroadcasting" anything. Internet transmission and conventional
analog radio transmission are quite differentnin the eyes of the law.

Believe "trunktracker" refers to new tech scanners that have a chip that enables them to read the trunking assignment signals ("growlers"), thereby allowing the scanner to follow a conversation that is reassigned to a new frequency/subchannel on a trunked network. These new scanners are more expensive, but if you live in an area that has adopted trunked networking, you are otherwise cut-out of the action, so to speak.

Cheers,
Ken

I am a new ham and I am looking to trade these ham radio items for something like a single band 10 meter rig, or any other cheap type rig that will get me on HF when I upgrade. Also SWL revievers with SSB and many other ham radio items will be considered, but mainly looking for something for something cheap for HF. Will trade in bulk, or by single unit. Please e-mail me if you have anything you want to trade.

For Trade:

*Azden PCS-3000 2 meter FM Mobile. 10 memories, PLL tuning, 25 watts output, detachable face (optional adapter required). Works great, but no microphone. (I have the mic plug and the pinout for the mic, but not the element itself). There might be a PL board build it, but I am not sure. Fair condition.

*Ranger RCI-6030 VHF-FM Marine Mobile. 25 watts high/1 watt low, all USA and International VHF Marine Channels, plus 10 USA/Canada weather channels, Dual Channel Watch, Backlight LCD display displays status of setup functions. Includes microphone, and cigaratte ligher plug. Very good condition.

*Bearcat 100XL Portable Scanner. Covers 30-50, 138-174, 406-512 MHz. 16 programmable channels, PLL readout, LCD display, Search feature. Uses 6 "AA" NiCads or Alkaline batteries.

*Motorola DPC-550 Cellular Flip Phone. Dual Mode, one acts as a normall cellular phone allowing you to make calls, and the other mode is a "scanner mode" which makes the phone act like a "cellular scanner" and can even do "Trunk Tracking" mode with PC software. (Inluded). 3 batteries, fast dual charger, car DC cord. Please contact me for complete info on this. *For educational purposes only*

*Bearcat 210 XW Base Scanner. 20 Channels, covers 30-50, 138-174, 406-512 MHz. Search feature. Instant Weather Search function. Battery Backup. Telescopic whip antenna and AC adapter included. Decent shape.

*Technophone 900 Cellular "Bag Phone" . Transportbale phone, works with systems "A" and "B". In "pouch" type "bag" which came with the unit. Works great. Has small scratch on display, but displays fine. Comes with Puch, Car DC adapter, full manual, "rubber duck" type antenna, and "trunk lid" type external antenna. Also included is a sheet which explains how to "clone" the unit to your current cellular phone number. *For educational purposes only*

*Motorola Spirit Voice Pagers. Two Motorola Spirit pagers, both set to 138.325 MHz which is a freq that the South Carolina Air Force Base uses. Both pagers work great, and both come with a rechargeable NiCad battery. No

charger, but if you combine both batteries, you can slide them into a charger for one "AA" battery and they will charge fine. Both are in fairly good shape.

*Cobra 19 Ultra CB. 40 channels, PA function, Digital PLL readout/tunning, , S/RF Meter, Automatic Noise Limiter, Unstant channel 9. Used less than 4 hours. All original packages, manuals, etc. Unnoticable from brand new unit.

*Midland Portable CB 77-911A. 40 channels. PLL tuning. S/RF Meter. No battery. Full 5 watts output. "Rubber Duck" type antenna. Works great. Instant channel 9.

Please e-mail me with any offers. Will consider most offers. I am in the Philadelphia, PA area.
73's,
N3ZVM

Will Sperling posted a message about MetroWest & that is where I
would suggest you get your next battery from. They have an NiMH
battery for the 2500/3000 series scanners. They work great. I have 2
packs and hardly ever use the second pack. You can get 12 hours on a
single charge. They are a bit pricey but you can offset some of the
cost by sending back your dead Ni-Cads pack for a rebate.

>today???
>
Bad reaction to a flamebaiter. The thread is pretty much
self-explanatory but *one* more time because I like you <G>.
Why knock the product or the manufacturer just because the
guy that's selling it hurt your feelings?

>You have never been a Bill Cheek ass kisser before!!!
>
That is correct and I am not a Bill Cheek ass kisser now.
I have never been anybody's ass kisser, past or present.
Winning hearts and minds is not my strong point. I tell
it like it is and I don't sugar coat it.

>> I wish *anybody* would do something to shut your sniveling ass up.
>> You are most tiresome.
>
I thought he was tiresome and I'll bet I'm not the only one.
Are you acquainted with Mr. Discipio? He's not one of your
Ham buddies is he? Nah, I guess not; a Ham would never conduct
himself like that in a radio newsgroup.

Thanks for posting this. My database got corrupted and I lost all my
killfile info when I rebuilt it.

Could all the rest of you nice folks who post nothing but profane
flames of Mackey please take another shot at him, so I can rebuild my
killfiles?

Thank you.

Mr. Di Scipio or whatever the hell your name is it sure looks like you get around the newsgroups everywhere even to the fags but no radio. You look not much interested in radio. Anything but radio, according to a search of your profile on the DejaNews.

Look at your prolifik activity and then maybe you will go far away. -=Dom=-

Bought it in June for $270.00 plus shipping. In the original box. Less than 2 hrs use. Extra batteries, charger and manual. Have lost the scanner interest, and have more scanners than I need. $225.00 plus shipping. Warranty card etc still with the unit. Absolutely no signs of use. Please E-mail to below address.
Thanks,

Todd / W4LA

> >Could you be a little more specific about what you want displayed?

Well, some are hard-wired, but there are a number of opportunities for
wireless
non-commercial video transmissions.

These would include the 900 output from those Rabbit and Gemini video
extenders,
and those Fisher Price (and another company) 900 MHz-based "baby
monitors".

Also, don't forget amateur radio TV on 420 MHz and up, as well as
low-powered broadcaster
licenses.

The ICOM R7100 with the TV-7100 adapter will supply this ability, as
well as the
Kenwood RZ-1. I believe there are a few other video-output receivers on
the
market as well. But they ARE rather spendy...

Does anyone have any experience with the new Panasonic T-970B 900Mhz
cordless phone? It's the one with the dual antennae on the base unit.
I'm particularly interested in audi quality, including sidetone, range,
and battery life.
Any comments would be appreciated.
TIA, Don

BULLSHIT!!!!!!

You want to back off of the letter/e-mail and fax campaign???? Whats wrong with you boy?
First of all, you do not realize that liberals who hate guns, scanners and freedom are very happy to get ANY additional restrictions on scanning simply because that sets the course for more restrictions down the road!
Next, you NEVER EVER back off of a political campaign simply because you THINK you see success down the road! THAT WOULD BE A VERY STUPID THING TO DO!
Those who hate freedom in America will simply use your backing off as a sign that you really do not have your heart in this, and therefore, do not care about the issue that much.
USE YOUR HEAD BOY!

WE DO NOT WANT ANY!!!!! ADDITIONAL RESTRICTIONS ON SCANNING!!
WE WILL NOT SETTLE FOR JUST A FEW MORE RESTRICTIONS!
WE MUST FIGHT THIS BILL WITH ALL WE HAVE GOT!
CALL YOUR CONGRESSMAN AND TELL HIM THAT YOU WILL NOT ACCEPT ANY ADDITIONAL RESTRICTIONS AND IF HE VOTES FOR THIS BILL< YOU MAY NOT VOTE FOR HIM IN THE FUTURE!!!! DO NOT GIVE IN!

Dont forget about the pres! Uncle Bill got 4 million in cold hard
cash last year for reelection from the commies in the chinese
government. Do you wonder what they wanted in return? He just gave
them breader reactors which can produce fissionable materials. In other
words, these electricity producing reactors can produce more fuels
needed to make atomic weapons. NO previous president would ever have
given the commies in China more nuclear power!!!!!!!!!

Because morse code can only send letter by letter, it takes to long to get a message accross, so a lot of abreviations had to be made. Not only do you have to learn morse code, but you have to learn the Q signal codes as well. Very inefficient.

Not that I care if anyone makes spelling or other errors, but since it is so important to you morse code fans, you are no better! (see above)

Now that we see that everyone on both sides can make a typo error, lets keep on topic, and not resort to picking out spelling errors when we can't find any thing wrong with the statement being made!

OK, then I won't see the correlation to where scanners lead into automatic weapons and firearms, as you refer to below!

> Example, fed law allows people (citizens) to own fully
> automatic weapons if; that person is not precluded from firearm
> ownership by any state or fed law (if all NFA National Firearms Act
> rules are followed) like a felon or ajudged insane.

> Now, show me the U.S. Code, statute, or court precident that says you
> or I have the legal right to have a scanner in our car or handhelds
> wherever!

The law that Bill Clinton signed that gives HAM RADIO OPERATORS (not just anyone) the right to have a radio capable of public service band reception (this can be a ham radio OR scanner. Especially since Ham radios can be home-made, and one might use a scanner to receive the 440 band while transmitting on 2-meters)

This applies to the United States (all 50 of them) and not other countries or "wherever" as you suggest.

Hi people,

Before contributing to the USA GDP, some questions,

Can anyone state differences between USA scanners and UK/EUROPE scanners??

How will it work a USA scanner in EUROPE???

Which are the major freq differences???

Is there any european version of the RELM HS 200???

I assume there will only be different freq, but I would like to check before mail order one from the USA (much cheaper).

All USA scanners are sold now with cellular freqs removed, are this freqs the same in Europe?? Which are typical european cellular freqs??

Easy questions, arn't they??

Hello everyone,

Looks like the Radio Shack Pro-2006 is sold. Someone jumped on it
about 20 minutes after I posted it.. Thank you all
for your interest.

Paul Moffitt

3297. Helicopter video downlink in Baltimore

Newsgroup: rec.radio.scanner
Date: 1997-11-05 00:00:00 UTC
From: Steve@swssec.com
Message-ID: <346061cc.51817936@news2.ibm.net>
Source record: 181176

Hello list,

Anybody in the Baltimore area will soon notice the activities surrounding the filming of a major political techno thriller movie called "Enemy of the State", starring Gene Hackman and Will Smith. Filming begins today (Nov 5).

The movie generically centers around Will Smith as a rogue NSA agent pursuing an innocent victim who is befriended by Hackman as a former spook, coming to the victim's defense. There will be a lot of electronic surveillance and technology in the movie, and the technology will use genuine surveillance equipment to be as realistic as possible.

Two helicopters will be used in filming all of the outdoor scenes. Twin engine Aerospatile (sp?) Twinstars. They will be painted as phony news choppers. One will be allegedly a covert NSA chopper doing surveillance, and the other will film shots allegedly from a spy satellite.

Our firm is a technical consultant to the movie and has provided a lot of script copy as well as the surveillance equipment Hackman and Smith will be using. We also installed S band video downlinks in each chopper, which will be transmitting the chopper film/video feeds down to the producers on the ground.

These chopper video downlinks can be monitored by anyone in the Baltimore area with appropriate capabilities. We are using two frequencies, 2458 and 2474 MHz, FM of course at these frequencies. Antenna polarization is RHCP (Right Hand Circular Polarization). Both freqs will be up simultaneously while filming or coordination is happening.

With an outrageously high ERP of 34 dBm, air to ground range tested 100% at ten miles when I got tired of driving. Anyone in the Baltimore area should have no problem copying this video.

We don't have the exact date yet, but soon a warehouse (Hackman's secret surveillance lab) at Boston and Ponca Streets will be blown up in a series of 3 explosions. The downlink video on this should be impressive.

Watch for the movie in November '98.

Steve

Jason wrote:
> I recently found the discontinued PRO-60 at RS for $170.
> 1) Is that a good price?

For this radio, yes it is.

> 2) Is this scanner better than the PRO-64 (besides the # of ch.)?

Better? That depends on what it is you are looking for in
a scanner.

The 64 has twice the channels and a LOT more features. It also
has a computer interface for limited access to memory.

The 60 is nice because it has wider coverage and Wide-FM
receive mode.

Both radios search and scan at the same rates and use 6 AA
batteries. Overall, the 64 will be more sensitive than the
60. Both have "lackluster" audio with limited power output.
Both have barely adequate backlighting. Both are made by
GRE of Japan.

I have posted reviews of both of these radios at my web
site. If you are interested in reading them, go to my
home page below. Follow the link for radio monitoring.
Page down to my table of receivers. You can take it
from there.

Good luck and if you have any other questions, feel
free to e-mail me at the Reply To address of this
posting!

>

Hey, I'm 28, and I think Metallica is pretty cool.

Of course, I know the rules of the Amateur Service in the US,
and transmission of music is strictly verboten. I'll have to
listen to either MW AM or 100 MHz FM or even HF Shortwave AM
to hear them...or pop in the CD...

They've gotten much less "angry" since they got fame and $$$.

I use a Bearcat 760.....works well.
Tried the RS 2026 but changed to the Bearcat when the RS started
dropping it's memories.....since fixed.
Both radios are made by Uniden and share a case and layout,
The Bearcat has the edge on ease of use....it doesn't have the usual
RS "Prog" button and the buttons are better marked for use when
mobile.
Also the BC has five user programmable search bands and a Limit
Search.
The RS has five preset search bands and a Limit search.
Performance wise..... .maybe the BC is better but it is marginal.
Not sure, from memory, what freqs are covered by each but I think the
BC has a wider coverage.....here in Australia the bands are a little
different to the US. Analog cellular freqs are covered by the BC but
not the 2026.
If you want to go further upmarket, the ICOM icr100 would be a nice
mobile unit....but I have no experience with it.

All this screaming about CW or no cw is a waste of time.
It is a conspiracy fostered by Who knows Who?

While everybody screams about modulation types, the little LEO's and the Cell phone companies and who knows who else are plotting there little plots to take over all the bands eventually.

DX is! Work it while and how you can!

>gets more interference until the scanner finally stops receiving it
>altogether and goes back into scan mode.

Sounds like Radio Frequency Interference (RFI) being generated by your computer is using the audio cable as a route to sneek it's way into your handheld scanner's circuitry. You need a way to electrically isolate the radio from the computer, but still get the audio into your souncard.

My friend Fred beat this problem. He has a portable tape recorder, one where you could listen (monitor) what you were recording by plugging an earphone into the earphone / monitor jack. He runs a cable from the soundcard to that jack. Then he runs another cable from the radio's tape out jack to the recorder's microphone input jack. (You could use an attenuating patch cord betweeen the radio's earphone or speaker jack to the same microphone input jack on the recorder). Then he plugs in a tape, hits record and pause on the tape deck, and bingo, no more RFI. Plus the volume on the recorder makes convenient level adjustment. There are more scientific ways of doing the same thing, like opto-isolator circuits, filtered audio transformers, etc. Good Luck, ACARS is cool.

I just got the latest catalog from SCANNER WORLD USA in the mail and in it is the MS200 and from what I can see for the price (259.99) it comes with just about everything you could want,ac adapter,CTCSS/DCS Tone Boards,dc power,telesopic antenna,owners manual,moble mounting bracket,and computer software disk.
Not bad but what I would like to know is if anyone out there has one and what they think of it's performance?
Thanks for your help-John inCt.

In article <3460C390.355F@ibm.net> iazpiazu@ibm.net "Ignacio Azpiazu" writes:

Hi,

> Can anyone state differences between USA scanners and UK/EUROPE
> scanners??
>
> How will it work a USA scanner in EUROPE???

Yes, as will a receiver purchased elsewhere provided it covers the
frequencies you wish to receive.

If the model you are interested in supplied with an AC adaptor it will come
with a 120v AC varient if purchased in the States. This would/may not be
suitable for your country (Spain ?) so you would just have to purchase one
locally.

> Which are the major freq differences???

In terms of "engineering" there is nothing different between any receiver
sold in the Japan, USA or Europe.

The main "frequency" issue is the non receiption of those frequencies used
by Analogue Cellular on scanners sold within the USA. As US Regulations have
no effect of equipment sold elsewehere this partcular frequency "block"
does not come into play on models sold outside the USA.

As to whether scanners are "legal" in any particular country is a different
matter :-(

Subtle differences *may* occur in the frequencies covered but with more and
more receivers offering continuous coverage this isn't such a issue.

If you take the Bearcat 220XLT for example the BC-220XLT's lower VHF
coverage is 29-54MHz for the USA/Canada etc. The UBC-220XLT has 66-88MHz
rather than 29-54MHz. Feature wise they are the same.

Just make sure the model you purchase covers the frequencies you intend to
receive.

Many models now have programmable increment steps and modes (ie AM, WFM etc)
so this allows you to enter frequencies to match the channel spacing used on
different frequencies. SOme of the less expensive models do not have this
feature and you may find that they default to certain step sizes and modes.

This is now often referred to as the "Bandplan". In certain areas the
Bandplan used in the USA differes from that in the UK and other areas in

Europe. If you cannot change the mode or step size you may not be able to enter the correct frequency or channel spacing.

For example, in the UK some users use 12.5Khz spacing and AM around the 152Mhz area. On a BC-220XLT you can only enter frequency with 5Khz spacing and in NFM.

> Is there any european version of the RELM HS 200???

Nope.

The RELM is a model (made by Yupiteru) specifically for the US market. That isn't to say you can't use it in Europe of course.

Same applies to the new "trunktrackers" from Uniden (BC-235XLT & BC-895XLT).

> I assume there will only be different freq, but I would like to check
> before mail order one from the USA (much cheaper).
>
> All USA scanners are sold now with cellular freqs removed, are this
> freqs the same in Europe?? Which are typical european cellular freqs??

No frequencies for Analogue Cellular differs in Europe. Digital/GSM opperate on different frequencies to Analogue also.

Hope that helps.

All the best,

People who are legal residents of the U.S. Virgin Islands are free from the opressive powers of the IRS and file their tax returns with the local IRB. It is easy to establish a Virgin Islands residency and escape the jurisdiction of the IRS completely and legally. Send me an E-mail message and I will help you with the information you require.

Actually the keystrokes are Manual+2+9. This will reset the scanner
(clearing all memories too, sorry.) It's always a good habit to reset a
scanner before programming it, to prevent weird "bugs" popping up.

Yes, for now that is where they come from. But what will happen when police agencies go digital encrypted (something they can do whenever they wish, the current laws already prohibit anyone not a party to the transmission from decoding it)? Simple. They will sell receive only digital radios to the news agencies (and anyone else who passes a strict and thorough background investigation) to the tune of $3000 a piece. And, if something is going down that they don't want on the 6 o'clock news, they just block the call from being received on that radio's "talkgroup". The technology and legislation is already in place, folks. Writing congress, the president and even Santa Claus won't change that. It's already happened in Michigan, and you can bet that the rest of the country is pinching their pennies, eagerly waiting to acquire such a system.

The point: Would the government ban the public from using a device that will be practically useless? Last I checked, you can still own a buggywhip...

Nope. I don't recall you using any profanity, and I'm pretty sure you
might have posted something of substance somewhere in the past year or
two, so you don't qualify, YET.

Of course, if you continue to respond to Mackey's continual baiting, I
may have to reconsider my decision.

Do you promise this is your final version? M@S@ who are you talking to?
Do you think that ALL COUNTRYS should abide by the same set of rules?

Do you think it's appropriate for smaller 3rd world countries to have
the same electronic exams as the U.S or Canada? Having obviously lived
in more than one
country I would have thought you would have better sense, clearly not.

3325. FS:GRE Super Converter 90001

Newsgroup: rec.radio.scanner

I have a GRE Super Converter 9001 for sale. This converter allows base scanners to tune in those blocked frequencies in the 810MHz - 950MHz range.

This converter is very simple to use, It connects between your antenna and radio and has a bypass switch for normal scanning.
You simply scan between 410MHz and 550MHz to tune in all the frequencies in the 810MHz - 950MHz range.
I am also including the optional wall adapter.

The price is $60 plus $5 shipping.

3328. Radios 4 SALE

Newsgroup: rec.radio.scanner
Date: 1997-11-05 00:00:00 UTC
From: John Gonzalez <radio3@idt.net>
Message-ID: <346132A1.8968BF71@idt.net>
Source record: 181207

I have the following radios for sale and would perfer to sell
them in a
package. However, any offers will be considered.

1. Motorola UHF Spectra mobile. and programming cable
2. Motorola UHF Maxtrac 32 channel mobile and programming
cable
with DTMF mic., regular mic. and external speaker.
3. ICOM IC 737 General coverage HF rig with touch tone mic
and tone.
4. ICOM IC W2a dual band 2m/440 portable and sspeaker mic.
(No battery or Charger)
5. Yaesu FT 23R 2m portable.
6. Dual band 2m/440 magnet mount mobile ant.

All radios are cosmetically perfect and in perfect working order.
Would like to get $2000 for entire package. I am getting out of the
hobby.
If you are interested please E-Mail radio3@idt.net

The PrO-64 maybe a better value .
It has slightly less frequencies (WFM 88.0 - 108.0) (Radio Stations - get a walkman)
But THE PRO-64 Has many more features for just 30 more (199.00)
(Auto store, 400 channels, Sort, 10 Priority channels, etc.)

A couple of questions:

Anyone know the pin-outs of the serial port on the BC895xlt? I just want to doublecheck before I drop $30 on the cable...

AAAAAANNNDDDD......

Just curious, but does anyone know what frequency Phoenix PD's "211-T" detectors work on? Is it data, voice, a beacon or what? I have learned by listening to the police channels that it is some kind of armed robbery panic alarm that transmits a signal for officers to detect, but that is all I have heard about it. It seems to be real touchy, too. Many false alarms that have led PPD on some real goose chases.

Any answers, suggestions, or wild ass guesses - WAGS for short :) - would be appreciated.
Thanks,
-Phil

I am thinking about getting an R10. What has anybody herd or
experienced? Any input will help....

Brett

3344. TRUNKER V3.x Online chat scheduled

Newsgroup: rec.radio.scanner
Date: 1997-11-05 00:00:00 UTC
From: trunkerv3x@mailexcite.com
Message-ID: <NqR7.54$bi.705022@news.sgi.net>
Source record: 181256
Cross-posted to: alt.radio.scanner,rec.radio.scanner,phl.scanner

In an effort to aid users of the TRUNKER V3.x program and PUBIC live online
chat will held as follows:

When: 11/8/97 SAT
Time: 11:00PM/2300 EST
Till: ~01:00AM/0100 EST, depeding on volume
Where: Yahoo! Chat (http://chat.yahoo.com)

Required Items: Web Browser, and Yahoo! User Name

Goto into the Yahoo! chat under Computers, then look for a "User Created Room"
and look for the TRUNKERV3X room. This is done via the "change Room" button,
and be sure to look for a "User Created Room"

Discussions of all parts of the TRUNKER V3.x program will be handled.

This is a PUBLIC chat so both testers & users as well as the Development Team &
Support Team will be online to assist in the discussion.

Hopefully this will give users, testers, & the Developers to a means discuss the use &
operation of this program in a forum other than just email.

If successful, we will try to schedule future chats to aid in this programs
support & development.

Members present from the Development & Support team will be based on availability.
